4. MY CB was my 1st Pooter !!!

Newsgroup: rec.radio.cb
Date: 2001-01-01 00:11:16 UTC
From: Dave or Debby <truth@planetc.com>
Message-ID: <3a4fccb0@news.planetc.com>
Source record: 66005

Yep, my CB Radio was my 1st COM-Puter. Why? It was made by CYBER-NET (the 1st ISP?)

My '72 Lafayette Base wasn't as Pooterized as my '76 Horizon 29, with all dem chips in there, destined to ALL go bad in 4 years! I should of bought a Midland then, but I didn't know much then. Digital Cybernet CB's in '75. PLL O2A !

If it wasn't for CB radio technology in '75-77, I know pooters would be years off for all of us.

IS this Classic spewage? You Cyber GEEKS please enlighten me more. That's the way is was as the way I see it! Is I wrong?
Dave!!!!!!

"h" <not@aol.com> wrote in message news:t4vhn2sl2a7kc3@corp.supernews.com...
I am a trucker and run I-80 from Pa into NYC everyday.
Very often we all here a guy who calls himself "the governor of
Pennsylvania.
The guy is on ch 19 and ata base station that blows out every radio about
halfway into New Jersey.
Mostly he comes on at night and tries to piss off every trucker out
there. Guess he doesnt date much.
Anyone else here been annoyed by this guy?

"Hey Voobner"? What is with THAT? It's "Mr. Voobner" to you, Tim.

Sigh. I'm constantly answering your questions. But I'll attempt to
assuage you one more time here. OK?

Look. I don't endorse going into other countries and cleaning up their
radio services. That's their goverment's business, not mine. And there
are appropriate international radio conferences designed to address such
stuff.

That said, the fact that there are millions of "export" transceivers
flooding into Central and South America from US companies should make

you think. Do some research. I did. These 25-32 Mhz rigs end up being illegally used on the ham bands and yes, on CB, too. So your pals at Galaxy and RCI are to blame for the crap you hear when the 11 meter skip rolls in.

I have said before that I support a ban on all "export" CB rigs (i.e., rigs designed for illegal CBers) and enforcement of that ban, be it by local police or the feds.

I hope that answers your question. If it does not, please clarify the question further and I will do my best to answer it for you. (No need to copy me via email either, Tim, I can read the NG just fine)

Best Regards,
Aaron Voobner

Kinda reminds me of what Kruschev said "WE WILL BURY you (in Jail)" !!!!!!!
We had a chice between the Commy Dummycrats or the Commy RepublicanRATS.
The CFT & Trilateral traitors at the top still have their man it! I feel
bad fow suppowrtin' Bush, but I was afraid of gettin GOREd !!!!!!
Dave

heehhehe..I hear yer point of view loud and clear CD. As you well know,
I ain't a fan of either side, but in my mind, if we're gonna keep
reminding people, a blowjob and whitewater pales in comparison to
Iran-Contra and the S & L pyramid.. I tip my hat to you on the Chinese
secret exchanges, or shall we say treason and espionage? It goes so
friggin' deep on both sides I don't give a damn about either party. One
thing I always say, we the people elect who we deserve. New York, well,
lets just wait and see....we'll do well here, never a doubt in my mind,
Jeb HAS to trickle down wealth to his guvnorship (sic) in the 'pile. You
think Byrd from WV has the market cornered for pork? You ain't seen
nothing yet! Yep, Fla., Tx., a few others are in for a prosperous time,
no matter what occurs elsewhere, to a certain extent. When we talk about
the evils of the past 8 years, yer preachin' to the choir, my friend.
The amount of incarcerations for nonviolent offenders reached record
heights during Reagan and Bush, via the war on drugs (read: people), at
1.2 or .3 million. This was their legacy due to property forfeiture,
expanded police powers and abilities, and an expanded prison system to
house these government created criminals. Clinton came along and
perpetuated this stinkin' farce and acclimated the numbers to 2 million
incarcerated during his term. During the Reagan Bush years, the assault
on our Bill of Rights began. Clinton shredded what was left him. The
strategy by Clinton was indeed brilliant, but he cannot take credit,
credit was due to the Reagan Bush era, and in part, the economy
included. The plan was this: Incarcerate by three quarters of a million,
build new prisons (adding to construction jobs) add a few million to
maintain the entire infrastructure, and as a result.....bingo...a low
unemployment rate and a booming economy.....paying for it all was that
great little tool made popular by the Reagan-Bush
area....forfeiture...which in turn has countless abuses in and of
itself. They both suck CD. We all have our opinions on who sucks worse,
but it would be a cold day in hell before I endorsed either damn one!

How to go about liberal hunting. They're nearly extinct, but if you turn over enough rocks you eventually find one.

Step 1: Go into a green pasture with plenty of grass and field stone.

Step 2: Load weapon with logic and rational reasoning. Check that safety is on.

Step 3: Check that safety is on. Repeat step 3 until sure safety is on.

Step 4: Let out the liberal call: "Conservatives are right wing religious nut cases."

Step 5: Wait patiently for one to come up from the "grass" and exhale saying something like, "Nationalize all industry."

Step 6: Turn safety off, fire weapon. Turn safety on.

Step 7: Check that safety is on. Repeat step 7 as much as necessary to MAKE SURE safety is on.

Step 8: Track wounded liberal by listening for whimpering phrases like, "Socialized medicine." Or the infamous "Gun control."

Step 9: Offer free subscription to the Limbaugh Letter to whimpering liberal.

Al, ya can't have a court say there is 13 eggs in a dozen... It still wouldn't change it.

Well folks, I'm happy to say that the light at the end of the tunnel has shown itself to the Clinton/Gore administration. And thank god, it's a freight train.

It'll be nice to kill some more spotted owls and make some power plants now that GW is in... Liberals... Interesting animals. Quite the reactionary critters, not much for logic and reason... Don't build the power plant , but please keep my air conditioner and my CD Player going... Ok... BTW, did you ever notice that the guy driving the car w/ the cloud of oil smoke coming out of the tailpipe is the environmentalist... Yeah, you got it... When he stops you can see the faded greenpeace sticker on the trunk lid. Yeah, that guy.... The same one who cuts the 6 pack rings so geese don't get caught in them. It's the same guy who tosses his sandwich wrapper out

his car window. Yep, same guy... Say one thing, do entirely another. That guy. Votes for Gore because he's afraid of what GW will do... Yep, that guy. The one motivated by fear instead of logic and reason... Yep... Same guy....

Near as I can tell, G.W. Bush has the collective intelligence of a two-by-four & a small soap dish. I don't think that Gore is any prize but he certainly has more going on between the ears and more accomplishments. Bedroom habits aside, I think Clinton will be a hard act to follow.

As they say, the longest journey starts with a single step :-) The
biggest problem with answering you is that you are actually asking two
questions in one. The first is ten meters and the second is illegal
frequency and power use in the 25-28 MHz band. As an aging boy wonder
Amateur the first interests me a lot while the second arouses a monumental
storm of apathy.

Regarding the ten-meter thing, the obvious answer is a small nuclear
device at the Uniden headquarters. Pre WTO days, we could 'prevail' on
Uniden with the help of a few other nations with a significant Amateur
population to 'voluntarily' make some basic design changes that would make
frequency modification virtually impossible. The alternative would be a
bitch getting any Uniden products thru customs or type-acceptance and
endless hassles by low-level bureaucrats. The Japanese are past masters

at the technique. It would seem that any long term solution has to be directed at equipment and requires some significant involvement by other areas of government as well as the FCC. One might question how knowing they are doing something illegal would do much but at the moment, most 10-meter interlopers don't have a clue what freq they are on. At the very least, CB Inc. is guilty of facilitation of the normal human search for the clear freq. We have dealt with shortwave broadcast in the 3.9-4.0 and 7.1-7.3 parts of the spectrum forever and have certain bands on a non-interfering basis; the Amateur community is well able to deal with some wandering minstrels in ten meters until their radios die.

The rest of 11 meters is going to take some thinking outside the box for exactly the reasons you mention. It has become something of a wasteland for any number of good reasons including:

A: It ain't 1958 anymore;

1. business users are on community repeaters, trunking systems, and a host of better alternatives than 27 MHz could ever offer.

2. Remote control has also advanced. RC models are in the 72-76 range these days.

3. FRS, MURS, even 49 MHz crap is far better for short-range stuff than 27 could ever be.

B: The CB rules have not met reality at any point in history.

1. Five watts is insane and could not ever provide anything resembling coverage in even a minor metro area at 3AM Monday morning.

2. With skip inevitable on 27, the summer intern that wrote the section of Part 95 that prohibited working it must have been coming off of an acid trip.

3. The state of the art has moved on. NBFM is now perfectly possible at 27 where it was not in 1958. SSB has long since replaced Ancient Mary. It must be noted that 99% of the world's problems with CB come out of Antique Modulation. Sidebanders are by-and-large pretty benign.

Feel free to add to the list. It ain't hard.

Now what in hell do you do about it?

First off, realize that -- your basic point -- the genie is out of the bottle and you are no more going to stuff it back than you are going to end the drug problem with enforcement alone. So you are going to have to come up with some structure that makes sense in itself. To some extent you are going to have to legalize what exists. You are also going to have to come to grips with the fact that is a medium largely based around the trucking industry which tends to suggest an almost VHF Maritime solution. And you have to recognize that CB is on different freqs in different parts of the world.

So let us start with freqs. First off, abandon the 'legal 40' and make it the ONLY place AM is legal with SSB as an afterthought but no new SSB rigs. This may also require banning AM below 29 on the ham bands near 27. Five watt max as per now. A rational solution has to finally drive a stake thru the heart of hi-power AM.

I do not know just what is assigned or what is actually in use above 26.185. The lower edge should be negotiated but should include all present CB freqs in use world wide. I believe New Zealand is down about 26.3 but don't take it to the bank. Now comes the cute part and I will admit to not having this totally figured out so let the truckers help here. There should be an FM-only licensed service (Class A CDL required) for inter-truck use and a neighboring service for travelers of both sorts with a car-to-car above that. You do have to allow local enforcement or you end up with every Truck-stop Annie (or Andrew) screwing it up. This implies a calling/emergency channel much like 156.8 (Channel 16) in the Marine Service. Sorry gang, goes with the territory.

So you use a mixed SSB/FM below 26.96. Above 27.41 it is SSB only. To cover a spread this wide, some form of automatic antenna tuning is required. So define it as what would be necessary to tune a 4-foot whip against a decent ground to resonance in the range and strongly prohibit any extension of the antenna tuning range to be even possible with existing hardware in the unit. Any system can be defeated but try to make it a bit harder.

Power limit is 25 or 35 Watts (dual-tone on SSB). Yes this will drive any linear in existence to 1500 and beyond. Perhaps we need to be somewhat more realistic about that as well by taking 6db or so out of the value of the line-e-ar. Idiots will always exist. If nothing else, it sure makes beam users keep it above 405.

One hopes eventually that by making it a lot harder on the Rebel Without a Clue to get an audience, more civilized radio can take place. And if it doesn't work, we haven't lost a hell of a lot because no one really gives a major shit about 25-30 anyway and we have even more gear for the Central and South Americans that cannot get a phone connection.

I agree the situation is hopeless but it is not really serious.

What is the performance difference, if any between a regular sized, and a mini face CB radio?

I'm looking at purchasing a mini face for my car, so I can conceal it when not using it on road trips (I.E. Hide it while in normal day to day driving, without removing it).

I'd like to know what brands are made in US (and specifically which ones made in RED China so I can STAY away from them).

What is SWR exactly? I can't find a web page that tells what it is, or what it does. Mostly just adds for an SWR Meter. Do I need a meter if I buy a CB radio?

Would a fiberglass whip antennae (4 Foot) work better than a 4' steel whip? What about length of coax for each? Why do I need so much? (18 feet??)

Thank you

Travis Marshall

You might be disappointed in the quality. Consider getting a better
quality radio with a slide mount (some even have locks).

>I'd like to know what brands are made in US (and specifically which ones
>made in RED China so I can STAY away from them).

If you want an all-American radio, think "tubes".

>What is SWR exactly? I can't find a web page that tells what it is, or what

Wouldn't hurt. Pick up a couple good books on radio comm, too.

>Would a fiberglass whip antennae (4 Foot) work better than a 4' steel whip?
>What about length of coax for each? Why do I need so much? (18 feet??)

These are subjects of much debate. Ideally, the 9' vertical whip has
the least amount of loss, and can be considered a standard by which to
compare. Some people swear that the coax length must be 18', while
others say length doesn't matter. My suggestion is to use whatever
works.

Source record: 66204

Greetings!

By your statement, then you choose to ignore any arguments that will change your stance.

Any antenna is REACTIVE, it's not a "pure resistive load". The RC value will play a role in antenna installs that cause feedpoint impedance problems with antennas that don't have enough bandwidth to tune out the reactive changes DUE TO LOCATION OR POOR GROUNDPLANE - I can't stress that enough.

Since you say it's not important, that is a foolish mistake. Prove it or shut up. James avoided a problem - unfortunately, the problem exists in the real world - we aren't dealing with dummy loads.

If you can't prove it, I'll drop it here then. You had a chance to teach me, but you refuse to allow a SPECIFIC variable that DOES occur in real world installs. Both Magnitude and Conjugate work together in the RC value - Magnitude to determine SWR, Conjugate to cancel it.

On Sun, 31 Dec 2000 20:58:36 GMT, while the modem was ice fishing with the Mouse, Coax Length Police <anylength@willdo.com> dissertation the following:

Greetings!

I believe I did, why make the problem worse by adding coax?

If you can't accept the answer, try a different approach.

You have an assembly problem if adding 1/8wave length of coax to cause
that type of change is occurring.

Greetings!

That is really due to the ANL section - the AGC, seeing such a
swinging carrier, has a hard time tracking such an event, so the radio
thinks it's noise and tries to blank it out. The AGC line biases the
ANL section - any rapid rise or fall causes the radio to treat the
signal as noise.

Sure you can modify the capacitance in the section to provide a
partial solution - but then you get a noisy receive too.

On 31 Dec 2000 23:50:44 GMT, while the modem was ice fishing with the
Mouse, timnebo@aol.comedy (www.kp82.com) dissertation the following:

:+> every cb i have had that had a decent noise blanker would do that. it confuses
:+> the extreme swings with being random noises and trys to blank it out.
:+>
:+>

Let me take a swipe at answering the question. It has an interesting premise. First, there are relatively few non licensed people appearing above 28 MHz. Yes, there are some, but the relative number is limited and I suspect that some of those are using radios with no frequency indication, just a channel. They might not know where they are in the spectrum. Second, not all of those Latin American stations are using high power--they can't afford it for one thing, and the number of radios on a given frequency operating locally is minimal, so there is no need to operate a great deal of power to be heard if you are driving around Managua. Few of the low powered stations in Mangua are copyable in Duluth. Thirdly, the laws of economics becomes a player in the action. The bulk of radios are being sold in North America. If the market was dried up by some combination of legislation and enforcement, the manufacturers might be more inclined to build radios for the NA market, and these in turn would flood south. It just might not be economical for a company to build a unique radio for Latin America where they might sell 2000 units while retooling for the North American market where they sell 20,000 units.

All of the above!
Price is $10 a month cheaper than DSL.
Speed? I am consistantly getting D/L speed tests in the 4750k p/s
range......do that with DSL
Performace...In the 3.5 months that I had DSL, It was down twice.....Once
for 2+ WEEKS and again for 3+WEEKS....
No problems with the cable line so far.
Train is gettin' on down the tracks and highballin' it back to the
Garden........

Greetings!

On Sun, 31 Dec 2000 23:46:08 -0800, while the modem was ice fishing
with the Mouse, "Travis & Heather Marshall" <f16fixer@wizard.com>
dissertation the following:

:+> What is the performance difference, if any between a regular sized, and a
:+> mini face CB radio?

None, except for less features, can't put all those knobs on the front
panel and still offer a method to turn them. It all depends on what
you call "regular sized".

If you're referring to a particular brand of radio you saw in the
window of a local radio shop - there are a lot of different sizes of
the radios CB has to offer.

As far as internals, no, there is little difference. Some "small
sized" radios use SMD [Surface Mount Devices] and are the same basic
circuits you'd find in the larger radios - only in sub-minature, small
chips.

The larger radios have more room for discrete [PCB mount case styles]
parts. They are more popular because local technicians and shops
appreciate the ability to make repairs or changes at the customers
wishes.

Some shops won't sell small radios that use SMD parts due to the
inherent problems associated with repairs that may be required to the
radio.

Another aspect, you lose some external control of features in the
smaller radios - so the manufacturer of them has to make a "best
guess" to the particular needs that a radio without the external
control - should work like.

This also brings up the issue you mentioned...

:+>
:+> I'm looking at purchasing a mini face for my car, so I can conceal it
:+> when not using it on road trips (I.E. Hide it while in normal day to day
:+> driving, without removing it).
:+>
:+> I'd like to know what brands are made in US (and specifically which ones
:+> made in RED China so I can STAY away from them).

No radios are currently manufactured in the USA, they are imported
from different countries. Midland, for instance, is from Italy, but

sub-assemblies are made in China. Taiwan and Philippines used to be others, but a major import is from Malaysia and are pretty much what you'll see in those shop windows.

Pretty much the entire market is based from products made in China. It's the quality control of the individual makers of these radios [Midland, Cherokee, Cobra and Uniden] have their own requirements and controls to ensure the product works when you use it for the first time.

Uniden, for example, does have China roots, but much of the assembly work is done in the USA for last point of assembly. Mexico and Japan are other locations for final assembly.

Midland used to be dominate in the USA, but CTE has taken a lot of the controls and assembly and placed them elsewhere. Mexico, Argentina, Brazil, Italy, Israel, Japan and other places, including China.

If you wanted to stay away from Red China, you can't in the CB realm.

Much of the dies and crystal growing areas are in China and Japan, while more high technology dies and substrate methods are kept here in the USA.

:+> What is SWR exactly?

It's a method of measurement. An antenna, in order to work efficiently, needs to be tuned to the frequencies of interest. In this case, the CB band.

The method uses forward power and compares it to reflected power, or RF energy being transmitted by the radio, thru a shielded wire known as coax, to and from the antenna. How well the antenna can use this power is important. If the antenna can't use all the RF energy effectively, it is returned to the radio. The antenna, put on a vehicle or on a roof of a house, it's location and how well it's tuned - determine how effectively the RF energy can be used. A lot of energy being returned, can harm the radio's transmitter circuits. The amount of power generated by the radio [Forward], not used by the antenna [reflected], determines the SWR - a simple ratio.

SWR = Pfwd / Pref - Pfwd, RF power to the antenna, Pref, reflected power from the antenna.

Anything under 2:1 is considered safe.

:+> I can't find a web page that tells what it is, or what
:+> it does. Mostly just adds for an SWR Meter. Do I need a meter if I buy
:+> a CB radio?

You'll need to tune the antenna first for best performance. Although a SWR meter is handy, you don't need to purchase one. The store you bought the radio from, should be able to help you on this - some stores charge a fee to use the meter, so you have been warned.

:+> Would a fiberglass whip antennae (4 Foot) work better than a 4' steel
:+> whip?

A gray area here, obviously the longer the antenna the better the performance and ability for the antenna to be tuned for a greater number of channels. Metal whips of that size/height are base or center loaded, while fiberglass whips can be loaded several different ways.

Steel antennas can be Center loaded [loading is a method to shorten the antenna but still allow it to work at the frequencies, like the CB band], or Base loaded. Meaning, Center, the loading section can be near the center of the antenna - away from the vehicles metal, or Base, near or at the base of the mount - close to the vehicles metal.

Both have pluses or minuses, take your pick.

:+> What about length of coax for each? Why do I need so much? (18 feet??)

If you purchase an antenna with a mount, which you'll need a mount anyways, to connect the antenna to the vehicle and the radio, you will need to get a section of coax with it.

Some antennas are the *entire* assembly, you have the antenna, mount, and the coax along with it. Some of these have a *lot* of coax with them. This is due to the manufacturer that made the antenna, they give you this length for a number of reasons. Locating the antenna, routing the coax, and in some cases, for easier tuning of the antenna for a wider variety of mounting locations or problems associated with vehicles, they aren't the perfect conductors for RF. The manufacturer designed the antenna this way - it's up to you if you want to use this type of antenna.

I personally wouldn't, I like flexibility. Most antennas and the mounts have 3/8-24" threaded. Some mounts may require you to use lug-rings to attach the coax to the mount, while others provide a SO-239 connector that is just like the one on the back of your CB radio [if you purchase], so all you need to do is buy a section of coax that you can hook up the radio to the antenna.

I prefer pre-molded ends to keep out water, Coax doesn't like water, neither does the mounts' own connections. Some sealing caul or other sealant should be used to protect the connections. Coax comes in different lengths to suit your needs.

If everything was done correctly, you shouldn't have any problems with performance - just pay attention to details.

If you like flexibility, get a mount, the antenna, and the coax separately. This way, you use the antenna you want, on a mount that suits your needs as well as the vehicles, and only the amount of coax you need.

Just be sure to hook up the power to the radio like the owners manual provided with the radio tells you, and assemble the antenna and put the mount - in a good location - on the vehicle! I can't stress that enough, location of the antenna will play a major role in how well your radio performs. Put the antenna on the mount, hook up the coax, check and tune the antenna with the SWR meter and make the final hookup to the radio - and you're all set.

I've got a set of pages that might help you in getting an idea of how to put this all together and choices you need to make. It's in my sig at the end of this message.

i agree, dsl sucks, it is supposed to be fast but it always falls
short. take for instance napster. heck i have noticed if i download a

song from a guy who has cable vs. somebody who has dsl, the song downloads a heck of a lot faster than the the guy with dsl. i have long suspected that there is a big variance in the speed of dsl depending on what time of the day or night you are using it. actually the phone company is in violation of their contractual obligations and there is a class action suit on this issue, but what can a little guy like me do? heck if i refuse to pay for it, they mess up your credit. oh well, i have learned. whenever my contract is up, i am telling dsl bye , bye and getting roadrunner, cd is out....

Technically a modulator is an audio amplifier that applies audio to the RF wave form for the purpose of modulation. This can be either an integral part of the transmitter or a separate audio amplifier. But in the cb world it is erroneously refereed to as a device to increase the output of a cb transmitter which is an RF amplifier not a modulator and it purpose is for what I stated, to make someone loud without any regards to purity of signal.

New & Great Guy:
Glad that you are an American wanting to not buy JUNK from RED CHINA !
I am a CB shop with 21+ years experience and do the same (I stay away from ALL stuff made there that I sell new). My answers are below each point, so you can see them easier. Dave
"Travis & Heather Marshall" <f16fixer@wizard.com> wrote in message news:RzW36.63036$EM4.277771@e420r-sjo3.usenetserver.com...
What is the performance difference, if any between a regular sized, and a mini face CB radio?

The mini faced one you want to get is the Pro-510 Uniden. The PC-68 Uniden puts out more power when tuned up, but if you want small, the 510 IS the best there is at that size.

I'm looking at purchasing a mini face for my car, so I can conceal it when not using it on road trips (I.E. Hide it while in normal day to day driving, without removing it).

I can get you a good hidden type that they don't make anymore that is the best there was around $150. If you go on the freeway anytime on day to day travel, you'll want your CB on. It may save you from traffic jams, police BEARS, or whop knows what running amuck. The mini CB may fit under your seat easier, but so may a PC-68. I can get you a Hump Mount that has a speaker in it that you can put a towel over it so no one can see it. I also have hidden type antennas too.

I'd like to know what brands are made in US (and specifically which ones made in RED China so I can STAY away from them).

None made here since '76 because of the Deut. 28 country that we are in, so what you want is the BEST quality for the $$$ you will spend-----Uniden. Made in McArthur's country--The Phillipines. They made the good OLD Cobras. Cobra, Rat Shack are made in RED China (OUR Enemies). Plus the quality is less made there, since commonism makes everyone make the same, unless you work for your god the state! (that's if your god is the state!)

What is SWR exactly? I can't find a web page that tells what it is, or what it does. Mostly just adds for an SWR Meter. Do I need a meter if I buy a CB radio?

NO you don't. Just look up in the phone book under "Radios-Citizens Band" or find a local independant NON-Corporate CB shop and have them set the antenna. I can tell you which American made antennas to buy that will probably need less adjustment. SWR is Standing Wave Ratio--the amount of power comming back to the CB that comes back if the antenna isn't set right.

If it is too high, it can damage the final. Also makes you hear less distance.

Would a fiberglass whip antennae (4 Foot) work better than a 4' steel whip?

There is NO 4' steel whips. They are 108" and I have 1 left @ $40. I have a 4' steel with a coil center to top loading; there is not much difference if the coil is at center or the top. If coil is at the bottom, it will work worse that the top. So no real difference between Steel & Fiberglass, other than fiberglass has it's coil higher so probably will work better. The BIG HYPE antenna companies of the day won't tell you this!

What about length of coax for each? Why do I need so much? (18 feet??)

You need that much because of 18' COAX DRUG HEADDED Salesmen, that's why! They are all parrots on DRUGS! You DON'T NEED any more than will reach from the CB to the antenna, period. I have American Made 3' and 55" magnet mounts that have enough coax. More is a WASTE of coax and NOT needed. What these DRUG HEADS don't realize is the less the coax, the less resistance you have so more goes out the antenna! They have never thought of that, since they probably own stock in coax companies!!!!

E mail me @ truth@planetc.com or post with any other questions you may have. I can get you what you want, or you can get it locally. Just don't go to Wally's World. Because this is NOT Wally's world!
Dave!

Thank you

Travis Marshall

CB Supertechs: !

What is the most different NON-CB job that you have ever done working in your CB shop or in your CB world?

Mine was fixing an electronic brake system in a big chev. pick up that pulled an airstream back in the early 80's. There are probably others, like extending range on cordless phones, which I do more frequent than that job, since that was a 1 timer.

I don't want to know what you were ASKED to do; what did you actually do and did you fix it?
Dave!!!!!!!!

It isn't hard to do. I already see someone has a problem with deleting certain posts. Hmmm .. seems everyone has to take sides, either you have to flame the group or you support 'illegal activities'. Apparently some folks haven't seen the results of what a few nuts can do to a board. I have seen a bunch of them shut down over Hotrod, Cool, and Tron. Now, many boards simply use ISP banning. I don't think this is about free speech; N8WWM and a couple others are not (in my opinion) trying to point out anything. They are simply posting to see what kind of flames they can cause. It wouldn't matter if this was the 'foods R us' newsgroup - someone would be in there constantly screaming about the 'twinky' eaters. As for me, I finally got my new CPU in and running, reformatted the C drive and reinstalled my software. I'm up and running and happy. Best bet is just ignore the guy. Has he actually CONTRIBUTED anything (besides flames)? Hey, guys, it is COLD around these parts. Go fire up the footwarmer! (that should bring a response or two!)

Happy New Year gang!

OK Hambone. You asked. Since you don't read either here it is right
from USENET (You know, the newsgroup people).

D. Who is generally allowed to issue cancels?
In general terms, the only people that are always authorized to issue
cancels for a message are the original author of the message and the
postmaster at the site the message was posted from. However, there are rules
that allow third-party cancels in specific circumstances, such as group
moderation, spam and spew cancellations, article forgeries, and a few other
limited circumstances; those people in charge of these duties are generally
authorized to issue cancels directly relating to the job.

Have someone read you the part related to SPAM & SPEW. If the trash this
moron N8wwm isn't spam and spew, I don't know what
it is. Any moron that comes into a newsgroup and makes from what I can tell
100 percent unwanted posts by other users is posting
SPAM & SPEW. If he were posting insanity on the hambone NG, I expect you
hammers would cancel him too (if any are intelligent enough).

Furthermore, please feel free to contact Epix about my cancelling his SPAM.
Don't forget to call AOL also about his contributions? to the group.
Oh, sorry.....I already did that.

Another ham trolling obviously.
Love, The Phoneman

I got involved with a trucker that was having trouble with
a Xylene (I think that's the name) generator.

For those that don't know... Fruits and vegetables ripen
with Xylene. Put a tomato in a paper bag, and the Xylene
it gives off causes it to ripen faster.

Most things like tomatoes are picked green, then put in a
warehouse that has Xylene gas to ripen them so that ship
to the stores 'just turning red'. That's how stuff like
tomatoes are kept 'fresh' through the winter.

Well, some truckers discovered they could Xylene their
trucks so that the tomatoes go ripe fast and are sold
faster. Some would just stop every 4 hours or so and
splash about a gallon or so around the floor of the truck.
Others would buy 'real Xylene generators' that were like
'vaporizers' that dispensed metered amounts on a
timetable.

Only trouble was the AC inverters the guy had bought from
the store were not sine wave, and they were driving the
circuits in the Xylene generators nuts.

The fix? Get a SINE WAVE inverter...

Mike

That was not my point. Ignorance is not a plea but it has to be demonstrated that everything possible was done to make you aware of the law. Does a clerk explain that the purchase of a CB is agreement to laws or regulations that could permit a search of your premises?

I would like to see the look on a store owners face if radios were brought back for refund since you could not agree to the terms that are packaged in the box. Lets hear from the merchants. What would you say to returns of this type?

If I can't read English, the rules are piece of scrap paper for the bottom of the bird cage. Like reading you your rights in a language you can understand. Inserting a piece of paper in the box is not necessarily sufficient notification. No one can truly verify that the FCC rules were in the box when the radio was purchased.

The rules are ancient, the system for enforcement is ancient and therefore pretty much unenforceable. Now, if you have been put on notice and continue to operate in an "illegal" manner your just plain dumb. Maybe you could plead an insanity charge, our legal system is vast.

I may have some mic plus that will fit the tram (or is it browning eagles)
that I make from GM plugs. Let me know if you want to buy 1. I'd rather
re-wire a mic than change the socket in that old classic !
Dave!

"The Moskal's" <larry@sgi.net> wrote in message

Does anyone know the mike jake pin-out for the Tram. I'd like to wire
the radio to take a four pin Galaxy mike. I probably would have just
figured it out on my own except for the capacitors wired between the
pins.

Thanks

A ham I known says,swing has been around and used in the ham world .
They call it forward modulation ,and yes if tuned up wrong it sounds
like crap,but if it is done right it is loud and clear.The way I do it
I leave in the limiter and use the diode method instead of the swing
kit. always getting complements on my good sounding station in skip
or local cobra 25 ,2950,2990.

My cutie was interfacing a glockenspiel and xylophone to an electronic organ. I begged some 50 conducter cable from the telephone company and used some darlingtons to interface between the approximate 3 volts in the keying modules in the Hammond X-66 to 40 volts used to drive tracker relay solenoids (yes, I had to buy a PILE of them - there are 37 notes in the xylophone and 37 on the glock!). It worked fine when I did this back in the mid '70s and it still works today. The hammers for the instruments were brazed onto the ends of the tracker relay solenoids and the organ signal simply turns on the darlington, firing the solenoid which directly drives the hammer onto the particular note or notes being called. The neat thing was that if you coupled the percussions, this would, in turn, fire the extra solenoids. Man, that sucker was (and is) LOUD. Also had a crash cymbol and bass drum hooked the same way into the footpedals. They were not that loud, however, as the solenoids were not capable of driving those larger things well. I always wanted to revisit the project using valves and compressed air, but the price of valves alone would be on the order of $1000 and then I'd have all that plumbing to do as well ...

73 from Rochester, NY
Jim
(ps, if I did it again today, I'd be using FETs instead of darlingtons!)

Hello, I have an X Force Amplifier for sale. It is the model X60012. It is a 2x6 model, with 2) 2sc2290's for the Driver Section, and 6)2sc2879's for the Final Section. It has a Copper Board, with cutouts for 16 pills. It also has Variable Power, and Seperate Power Leads for each 2 Pill section.This Amplifier was Special-ordered, and Custom-made for me in June, of this past year. Several options were added at the time of manufacture. The "#12" designed, Biasing Circuit..., Single SideBand Delay..., Recieve Amplifier.., and 18' Wired Remote Control.., It also has Upgraded Power Leads. (it comes stock with 10ga.., It have 8ga. in mine) The Amplifier has never been Abused, Over Driven, or Over Volted. The Original Transistors are still inside.The price is Negotiable.. If Anyone is intrested, or has ANY questions...., I can be reached by E Mail at maniac9188@aol.com
Take Care....

Other than boat anchors and rigs modded to the ham bands since Antique Modulation was outlawed in most services many years ago, Ancient Mary does not show up a lot on the ham bands. It's a nostalgic retro trip and not much more. I admit to liking to hear a Radio Spain for example with really beautiful AM but no one seriously believes it is anyone's answer to communication.

Over the years there were a number of fairly similar approaches to trying to stuff 6 pounds of fertilizer into a 5 pound bag (only on CB do they try for 10). Almost all of these used the audio either as partial power to the final or as a keying voltage to the screen of a beam tetrode. They did not actually result in peak power or modulation any higher than a straight AM rig but they did fake out the AVC (AGC if you like) in the receiver and sound different. It did allow for running finals a bit harder than the book allows so maybe it had some use in the air-less state days but transistors are not that forgiving.

Amplitude modulating a transistor is something of an unnatural act in any case and certainly requires techniques different from those used on square-law devices like tubes or FETs. One way or another you have to vary current to the final because varying voltage does not accomplish a whole hell of a lot. Almost by default, you have a current supply or regulator being switched at an audio rate. It is generally necessary to do it to successive stages to get much done so the final becomes something of a modulated linear. All sorts of ways to deceive yourself or your

customers.

Parenthetically, you must know one very elderly ham. The high point for cute AM methods was right before WW2 with a system designed by a guy named Taylor. There were some controlled- carrier rigs in the late 50s that reduced carrier to preserve some overworked finals when there was no need for the heat.

If you want to do it right, generate double-sideband with about 30% carrier and talk your buddies into synchronous detection. This was GEs system in the battle with Art Collins to replace AM with SAC in the 50's. They lost but WTH.

Top and bottom is a single concept. All modulation is a mixing process; mixing processes require that one input be at least twice the level of the other whether it is the first mixer (or detector, the words are essentially interchangeable) in a receiver or the final of a transmitter. When this is not the case, crap is generated but in no case is the A+B output greater than 150% of the larger of the two inputs. Yes, I am familiar with the stunt to get more on positive peaks.

Bottom line: not all 'swing' is audio.

Dick McCollum N&#65533;BK and aging boy wonder.

they do introduce distortion the fact is it is louder than one that doesnt
swing
. I guess you prefer the compressed nasaly sounding radio with a big dead
key personaly I believe if my radio keys 5 I swing it to 10rms, 50-100,
500-1000 and so on but i depends on what i am trying to accmplish.

I don't have to test the theory, all I have to do is listen to the idiots using these modded radios with "lotsa swang" and hear the distortion and splatter. These radios would sound a lot better if they had some chocolate and vanilla poured in them. There is no advantage of making a radio swing over having a radio that fully modulates the dead key carrier. The only thing it does is make meters swing which seems to really make cbers get their cookies off. But the cbers have fully trashed 11 meters already, so adding another modded distorting, splattering radio isn't going to make much difference.

Quoted from Voobies Post """Thanks for your note. I have Voobner relatives over in St. Mary's
County. I could arrange for you to meet them, maybe share some beef jerkey and a soda over at Buzzy's Country Store. They could show you photos of me in my Air Force uniform. Let me know."""

You initiated the meeting i just want to be there why should I let you dictate anything this is a mutual meeting where you said the voobners would like to share some pop and jerky. I also dont meet strangers so I would like to check out these people who knows they may be into things I don't like. So when can I expect a fax of the same Items you require of me. Why would I have a passport? I don't travel abroad.Why should It be any different for me to request these items of them? What part of St Mary County are they.? I am waiting

Well congratulations fellas,

It took you, what, TWO MONTHS to find that? What geniuses. You guys deserve a Nobel Prize for your work. So now the brave souls in this NG will have a grand old time being rude to me once again. I guess if you cannot defend illegal CB activity then your only recourse is a personal attack. I truly feel bad for you.

A few days ago I was driving behind a pickup which had what appeared to be a 5-ft base-loaded antenna (possibly K40 or Wilson) mounted on the cab roof (couldn't tell if it was a permanent or magnet mount). The driver of the pickup was communicating with someone further down the highway and despite heavy interference, appeared to have no trouble hearing the other person. I, on the other hand, could just barely hear the signal through the static. Obviously something about his setup must be superior to mine, but I can't figure out what.

I drive an Explorer, which is roughly equivalent in height and mass to his pickup (this was a full-size pickup with a cap on the back). My antenna is a 6-ft Anttron (which I've heard is equal to, or better than, the K40 or Wilson) permanently mounted on the roof between the windshield top and sunroof. Between the stud mount and antenna is a quick-disconnect adapter and 90 degree fold-down adapter (before pulling into the garage I just open the sunroof and fold the antenna down onto the luggage racks). The coax is 12 feet long, not coiled anywhere, no cuts or kinks, and the connections are good and tight. The radio is a Uniden PC68XL. The SWR is around 1.3 on all channels.

My speculation is that either the QD/FD adapters are causing signal loss, or the pickup's radio has signal boost/filter circuitry that's better than the PC68's. Does this sound plausible or might there be some other factor? (I'm obviously not a 'radio tech'!)

214. ILLEGAL CB CRYBABIES-HOW THEY WHINE!

Newsgroup: rec.radio.cb
Date: 2001-01-01 22:39:24 UTC
From: n8wwm@aol.comnospam
Message-ID: <20010101173924.20788.00000421@ng-cr1.aol.com>
Source record: 66161

You dweebs are the ones who should get a life. You can't take the intellectually superior and superbly accurate words of the MIGHTY N8wwm. What a bunch of little crybabies. "Mommy, that mean hammie N8wwm said we were ILLEGAL, lets kick him off usenet...Please mommy, please!"

Hey Scottiekins, did you and tnom and Twistie have a nice honeymoon? I heard PunishHIZbootie and 1mangayboy were there for the orgy. Are their little pee-pees dinky naturally, or did you just suck 'em down to a nub? I strongly suspect the latter is the case.

Haven't seen you guys online much, I figured that you were jerkin' off on yer Sparkomatic and ILLEGAL 2 pill amplifier.

The MIGHTY N8wwm is invincible and dedicated to making you face the illegality of your actions.

By the way, next time your momma wants to come over, please tell her to take a shower and also to douche. You might like sniffin' that odor, but I do not. Also, tell her to wear her false teeth next time. The gumming action is fine, but it does not look real good.

The MIGHTY N8wwm...Hated & feared by ILLEGAL CB twerps...And LOVING it! Special "howdies" to Scottiekins, Twistiekins, 1mangayboy, NeboDweebo, cd<BKA complete dork>, SwangHISThangman, Phoneyboy the butt pumper, and PunishMYbootie413! You Cat box lickers!

220. Re: reception question

Newsgroup: rec.radio.cb
Date: 2001-01-01 22:46:51 UTC
From: Bill <wdecker1@rochester.rr.com>
Message-ID: <vN746.672$Rb.159895@typhoon.nyroc.rr.com>
Source record: 66175

I have had a few bad experiences with the 1/4 turn type of QD's, including some ice/H2O infiltration problems that prompted me to stop using them. Not familiar w/the Antron, I use a 4' Firestik II on one vheicle, and one of Rat Shack's 66" whips with the small dia. coil at the bottom, much like the old "Half Breed" antennas. Both work very well, the SS is on the taller vehicle primarily because the steel whip will withstand about anything it hits without damage. RX results are virtually indistinguisable between the 2, however I played around with a friends' Wilson 5000 and there was a noticible improvement.
Worth a try...

First you need to determine the source of the static. Is it fuel pump or other electrical interference. You said you have an explorer if the fuel pump mod hasn't been done your having to overcome a tremendous source of noise.
What happens to your SWR with the adapter removed? Behind the sun roof may be a better location too. If you know some one with a mag mount you can fool with, try different spots along the roof. The 68 typically has an excellent receiver but a check up to make sure its on frequency wouldn't hurt either.
Hope this helps

The same chassis and cabinet is used from 8-16 transistor amps, and yes, can be expanded.

Yes the ones who dont operate there radios correctly, most are non-technical type older black men this is not a knock on them they dont know any better. I hear them brag I key up at 5000 and swing back to 2500, then i laugh but guys at keydowns who win usually swing forward they are not looking for clarity.

DESCRIPTION

Date of Birth: Who cares Hair: Greasy
Place of Birth: Ohio Eyes:shit Brown
Height: 5 foot Complexion: Flaky
Weight: 375lbs Sex:homo and is the {catcher}
Build: Large Race: White
Occupation(s): Bum, Selling kiddie Porn Nationality: Greaseball
Scars and Marks: Dimpled ass, little dick, Cum stains on his face.
Remarks: Kin to the Famous Fat Bastard from the Austin Powers Flick

CAUTION
Douglass has been known to frequent playgrounds in hope of luring small boys into his "love nest". He has a very lonely life and has nothing but time on his hands, because he could not get laid in a mexican whorehouse. He is a pathetic man who jacks off constantly, and never wipes off his hands. He should be considered Fat and Lazy. If you spot him don't try to apprehend him unless you are armed with twinkies!!!

I always wondered why my nuts stink,
I tried everything, even soaked them in the sink,
They smell like piss mixed with shit,
They smell so bad I can't handle it,
The girls won't touch me and my stinky nuts,
I can't even score with the nastiest sluts,
I tried cologne, I tried lysol, even listerine,
I've tried it all but can't get my nuts clean,
I shave them and scrub them, but I still get the funk,
My nuts stink so bad, people think I'm a skunk,
I went to a doctor, to destinkify my nuts,
but he took one whiff and puked out his fucking guts,
I took a steel brush and gave them a good cleaning,
But it just left my sack aching and bleeding,
I just can't seem to make my nuts smell good,
My neighbors tried to kick me out of my neighborhood,
My family can't stand to be around me,
Because my nuts are so fucking stinky,
So I guess I'm doomed to have smelly nuts,
They will always stink no ifs ands or buts.

Broken hitcounter??? NOT BLOODY LIKELY!! BWAHAHAHAHAHAHA!!!!!!

> FYI: Claris home page tracks revisions by
> latest date.

Of course it does! That newbie page was cobbled together in the wee hours this
morning and your squirming and lying about it is CLASSIC!! BWAAAHAHAHAHA!! I
suggest you stop calling those poor people in the pictures "Voobners" before
they find out about it, though.

> But you guys ought to be ashamed of yourselves spending SO much time
> digging into html code and whatnot.

BWAHAHAHAHAHAHA!!! How clueless can you be? HTML source is two clicks away for
most folks, and that date line is right on top.

> Why? You are becoming obsessed
> with me. I am worried about you.

Looks more like you're obsessed, newbie troll-monkey!
I just say you should have thought of the name "ABNER VOOBNER" (BWAAHAHAHAHA!!)
before you went with "Aaron". It would have been a much more effective phony-
troll-alias.

BTW, if a trolling newbie retard like you represents the efforts of the
Feds "to create an intelligence database" on amps and such (snicker), those
buying, selling and using them have NOTHING WHATSOEVER to worry about. =D

Most Sincerely,

Sea Captain Deadbeard

Good work, Scott,

Busy, busy, busy fingers busy looking for Voobner info 24 hours a day.

Yes, that is THE Buzzy's - the one and only. It is sort of a local hangout for us when we visit Maryland. Of course my Aunt Pheobe who is my Dad's sister took Fernald's last name when they were married, so of course you will not find a Voobner listed in St. Mary's County. But I assure you, they are as authentic Voobner relatives as you can get.

PS. I have left out their last name for the safety of the foolhardy in this NG. Fernald would not react kindly to being hassled.

Best Wishes,
Aaron

I have had a few bad experiences with the 1/4 turn type of QD's, including some ice/H2O infiltration problems that prompted me to stop using them. Not familiar w/the Antron, I use a 4' Firestik II on one vheicle, and one of Rat Shack's 66" whips with the small dia. coil at the bottom, much like the old "Half Breed" antennas. Both work very well, the SS is on the taller vehicle primarily because the steel whip will withstand about anything it hits without damage. RX results are virtually indistinguisable between the 2, however I played around with a friends' Wilson 5000 and there was a noticible improvement.
Worth a try...

My, my, Mr. Captain,

At last, one of the real hard-core illegals rises from the murky sea floor. Sounds as if you are VERY threatened by me, otherwise you would have stayed down there at the bottom where it's nice and safe.

So, now that you know all about me and my family and have photos to look at and names to read and even html code to ponder, how about telling us a little bit about yourself, Cap?

Are you also the same "captain@navy.org" that posted some drivel a while back defending the illegal amp industry? Or maybe you are one of the DaveMade gang in New Jersey running coke up and down the eastern seaboard? Or perhaps you are just a threatened little black market retailer of illegal CB amplifiers afraid to have a light shined on you?

No, of course we will never see anything factual posted by you. But as some in this NG say, there may soon come a day when your particulars are posted on the FCC website along with details of your fine and jail term.

Roll the dice buddy,
Aaron H. Voobner

Expensive filter!?!? What are you smoking?

All that's needed is a couple of .01 caps.
One across the hot and ground AT THE MOTOR,
and one or two more from hot and ground to
a nearby ground point. These connections
must be made at the motor and the wires
need to be as short as possible. You
shouldn't use the horn so much! LOL!

This HAS gotten way out of hand. Unfortuantely, I am a ham (first licensed in 1962 as WN2CJV, then general and extra as WB2OSP, WA3RJX, N2JH, and finally now as AA2QA). It is this sort of demented individual that turns folks away from amateur radio. I assure you he is in the minority - but that small vocal minority can really cause grief. I guess we are going to have to complain and see if ISP banning can be imposed. This IS SUPPOSED to be a recreation newsgroup, not a rant newsgroup, right? Perhaps some folks will also understand why I enjoy the company of a few CBers at work and am not very active with the amateur radio! The key is ATTITUDE ATTITUDE ATTITUDE! I especially do not care for the attitude N8WWM and Mr Voobner have that every CBer is illegal, all have wide signals, and all are stupid. The only real stupidity I have seen around these parts is on the part of N8WWM and Voobner. Don't they have a life beyond flaming the newgroup?

Sigh ....

Hello,

My wife and I (we are seniors) enjoy visiting mountains in our part of the world (Washington State). Some of these mountain areas are isolated. A couple of years ago I had to walk many miles to get help when our car broke down. I understand cell phones are not reliable in our area. It occurs to me a cb radio in the car might be useful. I need something compact, possibly hand held (we have a very small car), and we are on a budget so we need something fairly inexpensive. Can anyone recommend a brand and model of cb radio to get? I know nothing about cb radios not ever having been involved with them. This group seems to me a good place to get pointed in the right direction.

Thanks,

Graham

Jim,

Of course I don't believe ALL CBers are illegal, have wide signals, and
are stupid.

However a majority of the posts in this newsgroup LOUDLY promote illegal
activity.

Now if they have the right to LOUDLY promote illegal CB, I (or anyone
else) certainly have the right to disagree - and not be rudely flamed
for it.

This is, after all, rec.radio.cb, and not "rec.radio.cb.illegal"

Sincerely,
Aaron H. Voobner

1st off, only YOU can permit an INSPECTION of the STATION (notice ...NOT of the premises) by the FCC unless they show up with a search warrant (unlikely the 1st time around). ...Of course, NOT allowing the inspection may incur fines and further problems with 'Uncle Charlie'... a 'Catch 22' if ever there was one.

....Think that failure to read english would prove a valid defense for an Arab failing to stopat a stop sign? ...or for a Frenchman failing to yeild? ..or for the Angolan who parked in a no parking zone?

>No one can truly verify that the FCC rules were in
> the box when the radio was purchased.

So, using that logic... buy a used radio from someone... obviously, no box, no rules or regs, and you're home free..... right???? Buy an amp... same way.... you didn't know... nobody told you it was against regs.... it's not your fault you took it home and fired it up..... I don't think the Judge is gonna' give you a break.

I'd go with a uniden brand radio for you needs. You didn't really say anything about traffic being around but for a CB to be affective you need to have someone else with a radio somewhat close (truck drivers etc) With the present conditions on the band you won't have very much range especially during the daytime hours. Uniden makes several different cb's and has a couple that are quite compact. I'd suggest getting a Wilson Antenna also either the Little Wil, 500 mag mount or even the 1000 mag mount. I would stay away from handheld units unless you are using it for emergencies on major highways etc. Handheld CB's just don't have the range even the smallest mobile radio does.

hope it helps

Don't waste your money on a handheld. Any small mobile and a DECENT antenna, like a Wilson 1000 will outperform a walkie talkie. Daytime use can be a bit tricky as we are at sunspot maximum and noise levels are high. Don't let the CB shop trick you into buying any mods for the radio, as most are snake oil. I will get flamed for this, but I suggest you get a "booster" if you want to expect to be heard to get any help. You may also want to get a no-code ham ticket, as 2 meter repeaters may be accessible from the higher points of the mountains.

Happy trails.

Greetings!

This thread brings up some good points....

Interesting note here, a lot of older users like the way a
dual-sideband, supressed carrier radio sounds. Not sure why they would
want to run their radios like that though. The carrier that is present
in the signal is what's needed in order for the detector to work
properly.

In order to really hear the effect of how the DS-SC method works,
you'd have to turn off the ANL, and be close enough to the station to
receive any form of carrier. You'd also have to use a radio that has
it's AGC choked down so the radio is not fighting against the swinging
carrier.

However, too much audio, and the audio amp stages pinch up - adding
distortion - then you'd have to ride the RF gain to prevent this.
Makes it difficult for receiving other stations that don't have strong
signals to work with - the volume is radically different between
stations with DSSC and without. Roundtables are difficult when you
only have one radio using DSSC, one fades out while others sound fine.

Simply put, a radio will provide 2 watts of audio ERP on one side of
the carrier which the receiving station will need the carrier to
decode. Thats pretty much standard. To obtain more audio, the carrier
can be "played" with to make the swinging effect and audio more
pronounced. Due to the ratio of carrier to audio will change.

Or you can use another method, called asymmetrical modulation to make
the carrier and audio both increase at the same time. This provides a
"positive shift" which most carrier detector diodes are set up for in
a radio. You'll see a gentler swing, but intelligibility is increased.

Greetings!

The term "Modulator" is what a typical end result looks like.

An amp biased in a way so that carrier level is at the lower curve of
the amps linear operating range, when audio is applied, the extra
power then forces the amp into the higher portions of the operating
curve. It looks like an RF wave that "modulates" with and follows
audio.

Since the carrier level is low to begin with, you'd have to be close
enough, or have a strong enough signal from the stations carrier to
hear, and see, the effect.

Otherwise a weak carrier with strong "Sideband" is all you really hear
- the carrier is not strong enough to follow the envelope correctly -
so when the carrier is finally detected, you can hear the audio but
it's in bits and pieces.

Heh.. No explanation for the BROKEN COUNTER LIE? Not surprising... STILL BUSTED.

> At last, one of the real hard-core illegals rises from the murky sea

Who said I was illegal? THIS is exactly the reason I don't support your
paranoid trolling stupidity. You come here and howl "illegal" at everybody that
sees you for the shambling ignoramus you are. Get a grip, nutjob.

> floor. Sounds as if you are VERY threatened by me, otherwise you would
> have stayed down there at the bottom where it's nice and safe.

BWAHAHAHAH!! As if *you're* some kind of threat to *me*? You are probably one
of the most milquetoast-ish trolls this group has ever seen. Your newbie
trolling doesn't inspire fear in me or anyone else, you preposterous looney.

> So, now that you know all about me and my family and have photos to look
> at and names to read and even html code to ponder, how about telling us
> a little bit about yourself, Cap?

Do you have a mouse in your pocket, retard? Who is "us"? I'm not the one making
a colossal paranoid jackass of myself and insulting anyone who doesn't take up
my lunatic crusade with me. That shame belongs to YOU ALONE. A little bit about
myself? I use the alias "Sea Captain Deadbeard", and I like to learn about and
use CB. No drinking. No drugs. I don't defend amps. I also don't suffer nutty

trolls like you with much patience.

> Are you also the same "captain@navy.org" that posted some drivel a while
> back defending the illegal amp industry? Or maybe you are <SLAP>

BWAHAHAHAHA!! Bogeymen behind every tree, eh paranoid boy? I don't even own an amp, you deranged simpleton. The guys on this group have helped me learn about radios and antennas. YOU come here, contribute NOTHING, and run around pointing your shit-encrusted finger. You are an utterly clueless TROLL and you're harassing people personally without good cause. And NO, "CB CRIME" is NOT good cause, you miserable freak.

> No, of course we will never see anything factual posted by you.

You want facts? Here're some, just in case you want to know what they look like:

1. You are a troll. An inferior and laughable troll, but a troll nonetheless.
2. You haven't discussed anything except as a trifling asshole.
3. You have put off getting your amateur license to attack people here.
4. It shouldn't "shock" or "dismay" you to be attacked right back.
5. You have been busted lying.
6. You have done -NOTHING- here to further your stated goals (freaky as they are).

> But as some in this NG say, there may soon come a day when your particulars are
> posted on the FCC website along with details of your fine and jail term.

Fine? For doing what? JAIL TERM??!!
BWWWAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA!!!!!!!!
[wiping tears from eyes] Ohhh... Man.. You need HELP...

> Roll the dice buddy,

[rolling dice] Awwright! I PASS GO AND COLLECT $200 while you GO DIRECTLY TO JAIL for being so ABYSMALLY STUPID as to suggest I'm breaking laws just because I find you a useless, worthless, lying, egg-sucking annoying dipshit.

> Aaron H. Voobner

What? Your phony-troll-alias isn't sincere this time?!

Yours Ever So Very Sincerely,

Sea Captain Deadbeard

Not hostile? You must not read your own posts. I know you catch alot of hell from the CB guys, but you are in their NG. I came to this NG to learn more about radio-ing because I was thinking of getting my ham ticket. But since I've read the posts you and a few other hams have posted, I don't want anything to do with ham. I have alot of CB buddies and not an amp or power mic among them. But to you, they are stupid and you are superior. According to you, I am a half-wit criminal because I have a Yaesu FT-101B on the shelf in my garage. It doesn't matter that I have never plugged it in. But because it is able to use bands I'm not allowed in, I am breaking the law. Maybe I am, but not for any lack of brains. So, I'm not stupid and you are definitely not superior.

Source record: 66364

Greetings!

The location of your antenna is considered omni-directional. You receive signals from all directions - there's nothing wrong with this.

The location of the other vehicles antenna, by your description, makes it directional in reception. Sounds like best results were towards the front. The height and proximity of the bed in the back makes the reception less than ideal from the rear/tailgate of the truck. He may have been talking to someone and used the RF gain control on his radio [don't know speculating here] and the delta-tune/clarifier to obtain that type of reception.

Explorers and other Ford vehicles aren't the best at providing low-level interference and rejection from fuel-pump and ignition. You may have been dealing with the interference from the vehicle adding to your own reception problems. He may have done some extra work to reduce the interference he may have suffered from before.

On Mon, 01 Jan 2001 17:06:28 -0500, while the modem was ice fishing with the Mouse, dbb dissertated the following:

:+>
:+> A few days ago I was driving behind a pickup which had what appeared
:+> to be a 5-ft base-loaded antenna (possibly K40 or Wilson) mounted on
:+> the cab roof (couldn't tell if it was a permanent or magnet mount).
:+> The driver of the pickup was communicating with someone further down
:+> the highway and despite heavy interference, appeared to have no
:+> trouble hearing the other person. I, on the other hand, could just
:+> barely hear the signal through the static. Obviously something about
:+> his setup must be superior to mine, but I can't figure out what.
:+>
:+> I drive an Explorer, which is roughly equivalent in height and mass to
:+> his pickup (this was a full-size pickup with a cap on the back). My
:+> antenna is a 6-ft Anttron (which I've heard is equal to, or better
:+> than, the K40 or Wilson) permanently mounted on the roof between the
:+> windshield top and sunroof. Between the stud mount and antenna is a
:+> quick-disconnect adapter and 90 degree fold-down adapter (before
:+> pulling into the garage I just open the sunroof and fold the antenna
:+> down onto the luggage racks). The coax is 12 feet long, not coiled
:+> anywhere, no cuts or kinks, and the connections are good and tight.
:+> The radio is a Uniden PC68XL. The SWR is around 1.3 on all channels.
:+>
:+> My speculation is that either the QD/FD adapters are causing signal
:+> loss, or the pickup's radio has signal boost/filter circuitry that's
:+> better than the PC68's. Does this sound plausible or might there be

:+> some other factor? (I'm obviously not a 'radio tech'!)

Greetings!

I can easily see your point.

For simple setup - disregarding features, noise rejection, and yet provide the performance - try a Uniden 510XL with a 5" Magnetic mount, and use an antenna like a 5 1/2' Francis "Hot Rod" antenna. Total cost should be under $100.00 - cheaper if you simply get a mag-mount antenna - but reliability is less with smaller stuff. Small stuff may not be the route you want to go.

At least you should be able, with the above system, get a hold of a trucker that can give you a phone to a local T/S or gas station. Or at least help you plod along until your cell-phone is able to get a 911 call thru to a cellular site.

Greetings!

Do you have the original mike with the unit? Most of the Sears radios
aren't quite wired for "drop in" replacement mikes.

Mike gain control, if it has one, needs to be fully clockwise to be
open and allow audio to pass. It sounds like you get carrier, so that
helps. Do you get a receive audio? Hear your wife talk back to you?
That is another good sign, two down, more to go though...

Can someone recommend an indoor antenna for a handheld CB? Everytime
I ask about this, people always suggest I put my antenna outside or on
the roof. My landlord wont let me, so I have no choice. I really need
an antenna that will work well indoors and increase my range a lot.
Can someone recommend a respectable model that would suit my needs?
Thanks.

looney.

Captain,

You're going to blow a gasket, sir, if you don't watch it. Calm down a bit. Brother, you really get worked up over this stuff, don't you?

OK, from what you say, you have been around this newsgroup a long time learning about CB, antennas, etc. Good for you.

Funny, but I never saw your screen name here before today.

But, we'll let that one go. After all, I'm not one to gloat over the mistakes of others. And to your credit, you admit to being legal. And you don't drink or do drugs or defend amps. Good for you. You know, Captain, if there were more with your attitude, the 11 meter band wouldn't be in such a mess as it is today. How is it that some people feel they can ignore federal laws is beyond me.

Regarding your discussion of how I am "busted" due to the counter on my family's home page, I'm afraid I don't follow. Your explanations don't seem to make sense. You say you have scientific proof that somehow I lied to you or something, I'm not sure. No one can quite figure out what it is you're all hopped up about, but you seem to be taking it quite personally and if I were you I'd calm down.

And the swear words. Captain. I suppose you think that it makes you appear "salty" to sprinkle your posts with obscenities, but I have got to tell you, that kind of thing will not go over well with decent people (especially women). Perhaps down at the docks or among the stevadores in the sea shanty this is a fair method of conducting oneself, but if you are attempting to communicate ideas to intelligent people you must learn to act civilized.

Look. For all your caterwauling you seem to be a decent person at heart. And I do appreciate you taking a stand AGAINST illegal CB behavior. It would really be a great band if it were cleaned up of all the miscreants that infest it. And the sad thing is that there is no need for CB to be the cesspool that it is. No need at all.

I recall that once a while back I turned on the CB set in my home office. My ears were immediately assaulted by one of the local overpowered CB "Rambo's" unleashing a torrent of obscenity. Petulia, my 8 year old happened to be in the room. "Daddy," she said, "why is that man acting awful?". I told her I didn't know.

I still don't.

Sincerely,
Aaron H. Voobner

> properly.

Yes, it does and the receiver supplies it in any suppressed carrier system. SSB accomplishes this by simply hetrodyning down the audio. It certainly helps if it is somewhere near on frequency. In a double sideband system, it is beneficial to phase-lock to the original carrier in a 'synchronous' detection system so it is at least current practice to leave some carrier to lock on.

DSB is something different from carrier futzing. Given filter-method SSB, audio and carrier and carrier are merged in a 'Balanced' Mixer. All that means is that where in a mixer A, B, A+B, and A-B appear in the output, the balanced circuit is set up to balance out A and B (a fairly primative version is a push-pull input and parallel output amp) so that only the sidebands appear in the output. Filter type SSB just crunches this thru a narrow filter and eliminates one sideband; DSB is the mixer output before filtering. If I want a bit of carrier I unbalance the mixer a tad. Synchronous detection was a major bitch with tubes but has come to be used in a number of short-wave receivers (with varying degrees of success) to eliminate the effects of selective fading where the carrier drops below the magic twice-the-sidebands level and sounds like crap to an envelope detector. Might actually make sense to try it to decode the crap on CB.

DSB lost the competition with SSB to replace Antique Modulation with the Strategic Air Command in the early 50s and was pretty well dead for years. It is being played with on some inter-channel gaps in commercial frequencies and is the stereo and other subcarriers on NTSC television. To my knowledge, no CB rig was ever built using DSB so I am not entirely sure just what these older ops are listening to.

> In order to really hear the effect of how the DS-SC method works,
> you'd have to turn off the ANL, and be close enough to the station to
> receive any form of carrier. You'd also have to use a radio that has
> it's AGC choked down so the radio is not fighting against the swinging
> carrier.

I think what you are referring to is some of the insane carrier fiddling that seems to be popular these days. In a DSB system, whatever carrier is re-injected is as steady as a rock. It has been, after serving its mixing purpose, been totally divorced from the sidebands so it has no relation to them except to restore the original phase relationship in the synchronous detector. So the carrier-derived AGC is not totally confused although it will probably - almost certainly - need to have the RF Gain backed off. The ANL has no effect whatsoever.

Just for the record, AM has been outlawed for many years in most services. It serves some purpose for broadcast, of course, and aviation outside the shortwave bands where the capture effect of FM could be dangerous. It is legal in the Amateur Service but is primarily a retro/nostalgia trip. Most of the carrier-fiddles I have seen are variations on capers that reached their height of popularity sometime about 1940 and that's even older than me.
Its major purpose is to make needles wiggle and separate the sheep from their wool.

> yesterday it got more than FIVE HUNDRED.

But... But... The COUNTER (snicker) WAS BROKEN!! BWAHAHAHAHAH!!!!!
BUSTED IN ANOTHER LIE!!! Doesn't lying bother you?

> And god only knows what you're doing while you're there. I have half a
> mind to take it down.

We're LAUGHING. Laughing the likes of which would probably split your skull if your mental condition allowed you to try it. Nobody really believes that there exists a real person with the name "Voobner". It's just too much. Once you've gone over the top with "Abner Voobner", it's hard to even think about it from the belly-laughing.

I'll tell you what though.. I personally pledge to apologize for any slights to your family if you can show some -solid- proof that "Voobner" is your real name. I could whip up some bogus crest that says "VOOBNER" (with a better Norse font, I might add) in about 5 minutes. Since you're using a Mac (a VERY popular platform for graphics design) it's not too much to suppose you did just that. So until the proof, stop insulting those people in the pictures by calling them "Voobners", you lying lunatic.

> I know it's difficult for some of you to grasp, but I am just a regular
> guy like any other. You need to stop being obsessed with me. OK?

A regular guy whose ONE GOAL IN LIFE IS RIDDING THE NATION OF "CB CRIME" (snicker) AND WHO THINKS TROLLING AN INTERNET CB FORUM IS THE WAY TO GET THERE. I'm not even going over that "helping the government" lunacy. My gut *already* hurts from laughing...

Your miserable, trifling ass wouldn't know REAL injustice, REAL rights being violated, or REAL FUCKING CRIME if it leaped out and bulldozed your house, stole your land, murdered your entire family, poked out your eyes and beat you into a coma reverse-hog-tied inside a burlap bag soaked with urine. You wanna

fight injustice, big guy? Fight the kind worth fighting.

> Aaron

Just "Aaron"?! C'mon, we miss your sincerity and full phony-troll-alias here....

Yours With Many Flowery Pleasantries,

Sea Captain Deadbeard

I'm in WA as well, and I frequent both the Rockies in ID and the
Cascades. I keep a three-piece 9-foot whip behind the seat for when I
lose service, and it does just fine in both ranges with 4 watts.

I was asked twice if I wanted to buy a General operators license! I guess I should have known this was possible. I've always assumed Hams were about rules and regulations. But above all, money talks. Before anyone gets the wrong idea, I did not buy a ticket. IF I decide to pursue an amateur license I'd prefer to take the test. It really isn't complicated and most anyone with a couple of years on the radio can pass the exams. I've taken it a bunch of times and pass it consistently.

Every year this time a friend and I flip a coin to see if we will get our licenses this year. This will be the sixth time we do it.

Hello Two-Five-Seven:

Yagi beams work great but so do Quad beams. As a matter of fact Quad beams are less sensitive to signal polarization than Yagi Beams. Half of the Quad Beam Antenna Elements are horizontal and vertical.

I saw one guy feed the Quad Beam in the corner, instead of the middle of the vertical or horizontal sides. I would think this worked ok to.

Anyway here are some web sites for beam antenna manufactures:

http://www.signalengineering.com/
http://www.mgs4u.com/index.html
http://www.majestic-comm.com/maco/support/index.htm
http://www.qth.com/force12/indexF.htm

Here is the antenna products for the ARRL antenna books and what not:

http://www.arrl.org/catalog/index.php3?category=Antennas%2FTransmission+Lines

Building the antenna isn't all that hard, but figuring the design, and tuning can be a hair pulling experience. The ARRL Antenna Book shows some 10 meter Yagi Beams that out to work great on the CB Band. After the elements are lengthen a little.

Graham,
All radios in the $75 area are about the same internally. Below this price they normally sacrifice receiver performance. As for antennas... this is a part of the system that should not be overlooked. Choose an antenna with the longest radiator you can practically deal with for greatly improved performance. I highly recommend the Wilson1000 magnetic mount for an excellent balance of practicality and performance. Expect to pay about $150 for the radio and antenna combined...

No, it's not considered "the best scanner that has ever been made."
That may have been true (maybe) at the time it was made, but a lot of
time has passed since then.

Now, the only people who ask $400 for them are people who are trying
to sucker the gullible.

> You're going to blow a gasket, sir, if you don't watch it. Calm down a
> bit. Brother, you really get worked up over this stuff, don't you?

[holds poor skeered troll to soothe him] Personally, I don't mind warped loonies like you except when they feel the need to harass lots of people personally in one group, such as you do. Then I reeeally LIKE you.

> Funny, but I never saw your screen name here before today.

BWAHAHAHAH!!! "Screen Name", says Mr. Newbner. Can you be *any more* of a clueless newbie? You must think you invented trolling.

> How is it that some people
> feel they can ignore federal laws is beyond me.

It's very simple, you bag-biting dumbshit. People -can- and -do- ignore laws and take the consequences that are specified if they are convicted. Ergo, go fuck yourself, et cetera.

> Regarding your discussion of how I am "busted" due to the counter on my
> family's home page, I'm afraid I don't follow.

BWAHAHAHAHAH!!! You claiming fear and ignorance is the norm, but this is classic "nuh-uh" stuff. Try reading the posts in question, then your responses, and so on. You, my little troll, have been BUSTIFIED. Deny it? State your reasons. Or, of course, just go fuck yourself.

> And the swear words. Captain. I suppose you think that it makes you
> appear "salty" to sprinkle your posts with obscenities, but I have got
> to tell you, that kind of thing will not go over well with decent people
> (especially women).

Trust me, if I'm speaking to decent people, they are treated better than you. First, if you can't handle the heat (or the salt), go fuck yourself. Second, you said that you ignore those who hurl insults and profanity such as I do (BUSTED *AGAIN*, LIAR), so again, go fuck yourself. Third, since I'm not looking for love on a CB forum like you seem to be (and failing miserably), go and (you guessed it) fuck yourself.

> if you
> are attempting to communicate ideas to intelligent people you must learn
> to act civilized.

I'm glad you realize this and your civilized behavior IS in order. As you are an utter dullard, however, I need not conduct myself in any more civilized a

manner than what you are used to, so please drive through and go fuck yourself.

> Look. For all your caterwauling you seem to be a decent person at heart.

Why thank you, you mindless derelict! Maybe you shouldn't have implied that I dealt drugs or operated my CB in a way that makes you get that funny look and start scratching all over and mumbling, "spiders, man.. spiders everywhere..." MAYBE you shouldn't be doing that to ANYONE, troll boy.

> And I do appreciate you taking a stand AGAINST illegal CB behavior. It

I'm not standing anywhere NEAR you, you ridiculous fucking loser.

> And the sad thing is that there is no need for CB to be
> the cesspool that it is. No need at all.

If only the world were filled with more delusional priority-challenged asswipes like you.... You could really take everybody to the fucking cleaners then, eh? Fortunately for the world, being a gormless wanker is the best you can be.

> Petulia, my
> 8 year old happened to be in the room. "Daddy," she said, "why is that
> man acting awful?". I told her I didn't know.

So THAT'S what's got you on to trolling. Using your children as an excuse for being a FUCKHEAD and coming here to harass and accuse CBers is LAME BULLSHIT. Next time put your pweshus chyyuld in the other room, you ass-licking nutcase. YOUR FAILURE to supervise YOUR KID is NOT MY PROBLEM. Hence, thou canst verily fuck thyself, ye numbskull who placeth blame where it doth not belong.

> I still don't.

That's because you're an obsessed loony-tune. Get a grip, get a life and a clue, and get fucking lost unless you can stop being an asshole. The whopping majority here and damn near everywhere else you can go are not interested in your useless, endless bitching, accusations and whining. Continue, and your thick skull will be routinely fucked for everyone to see and laugh at. Deal?
`,)

Yours and So Forth and So On,

Sea Captain Deadbeard

Sounds like he wants Jerry Garcia for prez... Peace and Love... Piss on the foreign policy issues...

All I got to say is that with GW in the house I don't think we'll have many more extra large portholes blown into any of our warships. Because, unlike the "feel good" prez we have now who sends people to ask questions, I'm sure that GW would send people to get answers.

One thing to ask Bubba?

"Where's our proportional response?"

Oh... I see... We're just gonna take the stance of the poor kid who gets beaten up by the bully at the bus stop for his lunch money and not do anything about it. Cryin victim all the way home. Nice way for a super power to behave. Oh yeah, wait a minute. Didn't Bubba pretty much disassemble the military? Oh, well maybe that's the right stance to take seeing as we don't have a military anymore in comparison to what it was back when Bush Sr. was in the house.

Gremlin,
I can't verify the performance of this antenna, but it is marketed as in indoor/outdoor 5/8 wave antenna. Check out this webpage, it's the last antenna listed, Firestick IBA-5.

http://www.alfenterprises.com/base.htm

Good Luck.

"Act" being the active word there... Yes, I loved his "act" at the funeral he attended with the crocodile tears. He certainly puts on a good "Act". I especially like his "Act"ion of appointing Mrs. Reno who when regarding Waco seemed to take a position of, "Zey vill have a fair trial und zen be gassed, burned, und zen shot." Nice way to treat the citizens of the US. And especially an excellent "Act" of alienating them so as not to make the rest of the US Citizenry think of them as "Americans" so you could deprive them of, "Life Liberty and Happiness."

Yes. One hell of an "Act".

I don't recall Bush or Reagan (And he was a professional ACTor) ever putting on this type of "Act".

All I am saying is there are many "what ifs" that a good lawyer could dance with all day long. However, the average CB user doesn't have the capital to defend him or herself so the government is able to take many liberties in its enforcement. That is, until someone fights back and develops precedence.

Many manufacturers have been held liable in personal injury suits for lack of warning labels on new and used equipment. Why couldn't a buyer be held innocent for purchasing CB equipment at a flea market without knowing if it is legal or not? Lets not forget that many users don't know about this group. They buy a radio plug it in and talk. Not a clue that it has been modified and is putting out 30 watts and came complete with an echo board and noise toy installed. Again this is assuming he or her has not been placed on notice.

Now if the FCC were truly serious about enforcement and not just placating some ancient Hams on life support they would be putting public service announcements on TV and radio. Now they have duly informed the public and enforcement could have some teeth. In reality it is not that big of a problem or at least a problem the Feds want to have to deal with. Ala, the local enforcement bill. Now they can pass the buck and turn down some heat.

Chris,
I just got one for Christmas. I really like it and the locals have given me positive feedback on the performance enhancement. All model come with a receive amp and SSB delay. These amps won't win you any keydown competitions, but they are a nice general purpose amp for the money, especially good for first timers.

Make sure that you get the right amp for your radio. If you are using an export radio, or any dual final high output radio, get an HD (high drive model). The non-HD models work best and last longer with low input, about 2 watts.

Good luck.

Dave

"Handy Andy" <CodysPC@Iserve.Net> wrote in message news:0o035to5q2lc2t9nb1v2f2kviin3lmssmj@4ax.com...
Greetings!

Do you have the original mike with the unit? Most of the Sears radios aren't quite wired for "drop in" replacement mikes.

Mike gain control, if it has one, needs to be fully clockwise to be open and allow audio to pass. It sounds like you get carrier, so that helps. Do you get a receive audio? Hear your wife talk back to you? That is another good sign, two down, more to go though...

Will a 5 1/2' Francis hold up on a 5" magnet mount, moving down the road? I don't even think a 4 1/2 ' one will. What they really need is a HQ-27 Hustler on it instead, or what they want is a 3' American made magnet mount, like the Hustler or the Little Will Robinson (Warning-Warning--says the Lost in Space Robot--you may waste money with Wilson, but in this case, the Will Robinson 3' magnet mount is comparable to the 3' Hustler brand magnet mount, but Hustler may be cheaper, since you're not paying for the HYPED brand name)! 510xl CB is good advice for you. I've sold ooodles of them to people like you!
CB will be cheaper than Cell phones too, and MORE fun and usable. Any questions e mail me--a CB shop of 21 years + @ truth@planetc.com
Dave

"Handy Andy" <CodysPC@Iserve.Net> wrote in message news:jqv25t4o3sojgmk2mj5tqfe5t1mkh7tthu@4ax.com...
Greetings!

I can easily see your point.

For simple setup - disregarding features, noise rejection, and yet provide the performance - try a Uniden 510XL with a 5" Magnetic mount, and use an antenna like a 5 1/2' Francis "Hot Rod" antenna. Total cost should be under $100.00 - cheaper if you simply get a mag-mount antenna - but reliability is less with smaller stuff. Small stuff may not be the route you want to go.

At least you should be able, with the above system, get a hold of a trucker that can give you a phone to a local T/S or gas station. Or at least help you plod along until your cell-phone is able to get a 911 call thru to a cellular site.

Jay's right.....
I'd go with a quad-beam (Quagi). The greater capture area of the
fullwave loop elements make for a 'quieter' antenna (less static) and better
reception (higher gain) than a typical yagi (beam) antenna. Quads do
require a bit more in the way of support structure and room, but are worth
it. They may even be a bit cheaper to build than a conventional yagi.

(73% of obscene ranting snipped)

Bravo.

Most instructive.

You have truly showed us what a TROLL is.

Now people in this NG can see the vast difference between you and I.

One of us thoughtfully expresses his opinion in a civilized manner.

The other (you, sir) merely delights in extended, pointless
obscenity-hurling.

If you wish to continue to sustain my attention, contribute something
relevant to the discussion - or be ignored.

Sincerest As All Get-Out,
Aaron H. Voobner

mista 257, i use a jo gunn myself. very satisfied with it. it will help you get out, i promise you. get a good quality rotor also. it all depends on the wind load on the beam you choose. they are nice people and always answer what question you have, and for spare parts there is not problem. stock out the box, it will take 4000 pep, to go with more watts, you have to change out the sleeve in the gamma match. i would suggest teflon. why the other day i was out there listening, and i heard pump out there and i keyed up and squashed him like a grape, comode, comode, head out.....

That's quite, enough. You've made your point. And your point is, you're incapable of rational discussion.

You have no right to drag Petulia Voobner or any of my family down into the low-minded septic tank that your postings dwell in. So let's leave them out of this.

You are merely a common flame-artist with a penchant for colorful obscenity. And you will flame until your material runs dry (soon) and then be gone.

I however, will remain.

Yours,
Aaron Harold Voobner

Spike, there are hams and there are bozos with ham tickets. We can no more prevent their getting tickets than you can prevent them buying radios. In any case, the local newsgripe is not radio; keep that in mind.

There are only four parts left in the Amateur licensing structure:

Element 1: Morse code receiving at 5wpm. The Boy Scouts required 8 in the days when they had a merit badge so while it is somewhat inconvenient, 5wpm is not a phenomenal hurdle.

Three written exams:
Element 2: Pretty basic. Passed by itself without code it yields the Tech ticket which is as far as the leadheads on this group ever got. As code is required under treaty, they are relegated to frequencies where no international contacts are likely unless one lives in El Paso or Detroit.

Element 3: A written in which the FCC discharges its responsibilities under the treaty to make sure you have ever heard of third-party traffic and such, honors environmental laws, and in general takes you thru what will land you in the do-do. About as technical as they get is propagation to be sure you have heard about sunspots. This gets you all privileges with the exception on four bands (80,40,20,15) of a 25kHz cw bumper right at the bottom and the lower half or so of the phone bands.

Element 4: Opinions vary on this one but it is more notable for breadth than depth. After that you gotta find a new exam.

If you don't have them, put three websites in your browser's memory:
http://ah0a.org
http://www.qrz.com
http://www.arrl.org I am not a member BTW.

Now get the 101 out of the garage, clean off the mouse turds, and set it up to receive. Some of what you hear -- particularly the 20 and 75 meter bands (14.0 and the 3.9 vicinity) will cause you to throw up; it does me too after 46 years. But sane people do exist elsewhere. It is really useful for code practice and to get a little hands-on experience with how the bands change day to nite and where the cw, data, foreign phone, and US phone is situated on Element 3.

Finally, feel free to use me as a source and use e-mail if you wish; I ain't recruiting but I am happy to help.

Do yourself a favor: aim for taking Elements 1,2,and 3 together for a number of reasons. At worst you get a Codeless Tech as a booby prize. Sounds more formidable than it is because you cannot effectively study code more than an hour a day, Element 2 is trivial, and the License Manual makes absolutely admirable bathroom reading.

Hey Boob 1000 watts for an 8 pill would be coasting. It probably would
exceed the legal 1500 watt limit though. Better not drive it to hard.

Hey man, a functioning antenna is an art form regardless of its frequency.

When you buy the tower get the gin pole, too. Else you will never recruit a ground crew again no matter how much beer you offer. Enjoy digging the hole and don't cheapshit the concrete; one leaning tower is quite enough. While you are about it, make sure it has connections for a ground radial system; you may want to Omega match it to 160 meters someday. If you can, run the cables down the center for that reason. And above all, be sure that you have left enough coax to rotate the beam with the tower extended and made provision for what happens when you let the tower down BEFORE securing the cables. :-)

And remember that the performance of an antenna is directly related to the suffering of the owner installing it.

390. X Force (Final Post)

Newsgroup: rec.radio.cb
Date: 2001-01-02 18:11:29 UTC
From: maniac9188@aol.com
Message-ID: <20010102131129.09657.00000081@ng-fe1.aol.com>
Source record: 66443

It seems like no one is serious about purchasing this Amplifier in this NewsGroup. The Bickering and Namecalling is very similar to a Third Grade PlayGround. That's the only Posts I have been seeing for a while now. This NG is NOT what it used to be. This will be the Final post for this Amplifier (and for me)... If Anyone needs to get a hold of me, for any reason....., I can be reached at maniac9188@aol.com.

. I have an X Force Model X60012 Amplifier for Sale. It is a 2X6 Unit, with 2) 2sc2290's for the Driver section, and 6) 2sc2879's for the final section. It has a Copper Board, with cutouts for 16 pills, 2) Fans, and Variable Power output....It also has "#12"s Biasing circuit installed, along with a Single
SideBand Delay, Recieve Amplifier, Upgraded Power leads, and an 18' wired Remote Control. Like was said BEFORE: This Amplifier was Special-Ordered, and Custom-Made for ME.., in June of this Past Year. I Ordered it this way, And it it has EVERY available Factory option Added. This Amplifier has NEVER been abused, overdriven, or overvolted. The original Transistors are still inside. The Exterior case, cosmetically, is a strong 8 out of 10. The working Condition never changed. The Amplifier still works as good today, as it did when it was new..

There are 2 Places that I know of that you can get even more information, and see the price and specifications, for the X Force units........
http://www.xportsrus.com
http:///www.exportradios.com
The price that they state on both, are "Bare Bones" Units, without ANY added options. Please Email Either one of them, and ask how much an X600 would be, with the options, that I have in mine , added to it. No "REASONABLE" offer will be refused. I have included the address of my personal WebPage, where I have detailed pictures.., that were taken about 2 months ago, shortly after I took it out of my vehicle for the Winter.... (It is now in storage.),

http://members.nbci.com/iomega216/xforce/xforce.html

If anyone is SERIOUSLY intrested in this Amplifier, or has any intelligent questions, you can reply by E Mail. We wouldn't want to upset the Ham Tech in Toledo. He is the one that is wearing Sandals, a White Robe, and Halo. He does no wrong, so, I guess, gives him the right to judge others.
Maniac.

news:92rlda$4a4$1@nnrp1.deja.com...

> However a majority of the posts in this newsgroup LOUDLY promote illegal
> activity.

That is, as usual, a STUPID and FALSE claim (i.e. a *LIE*), typical of the asylum-escapee who spewed it. I, however, am willing to put forward a quiz to help Troll Boy to understand his own guidelines. To wit:

Which of the following statements constitute "LOUDLY promoting illegal activity"?

(a) I have/I want an amplifier
(b) I communicated over 5000 miles
(c) I want/here is modification information
(d) EVERYBODY GET ILLEGAL NOW NOW NOW!!!!

If you, the retard in question, classify any but (d) as LOUDLY promoting illegal activity, you are a cretin devoid of the ability to differentiate discussion of a topic you dislike from LOUD PROMOTION of same. In this case, you're trolling, and you'll deserve to be lit up like a whining Yule log.

> Now if they have the right to LOUDLY promote illegal CB, I (or anyone
> else) certainly have the right to disagree - and not be rudely flamed
> for it.

Surely! However, you DON'T have the right to rudely troll and make false statements unmolested, 'cause I LOVE to molest lying idiot trolls as they attempt to bait a newsgroup. Stick to the guidelines and you're home free. Trolling or other nuttiness, however, gets you yet another rousing chorus of "Jam, Jam, Jam On The Retard". Mmmkay? =)

> This is, after all, rec.radio.cb, and not "rec.radio.cb.illegal"

Right on! I'm glad you now understand that this is NOT a forum for your ranting about and unfounded indictments of "illegals", drug use/dealing or other soporific nonsense. My compliments to your psychiatrist. You *may* be spared additional skull-treatments if you can sustain your remarkable progress in this way. Good luck.

Cordially, etc.

Sea Captain Deadbeard

You haven't been following along Fred. Stop trying to save the 02. Drifting in and out of consciousness? Ignorance is not an excuse but there is a requirement to inform as well. Like posting speed limits, warning signs etc, etc.
The FCC does a very poor job outside the Ham community in educating the public what CB radio is and the regs surrounding it. A piece of paper (maybe) in the box of a new radio does not necessarily satisfy their obligation.

They should spend more time inspecting TV, radios and phones for compliance. Maybe they will place that burden on the local police too.

Getting out of the hobby, don't need this stuff anymore. Make an offer on one item or whole lot. Located near CT/MA border, willing to meet you at a local shop to try items on the bench before you buy.

RCI 2950 w/built in echo board (has its own on/off, volume, and level controls), absolutely flawless in appearance and function, peaked and clipped, does 26 to 32MHz AM/FM/SSB/CW, display dims properly, roger beep works, has replacement mic that's new, etc.

Grant XL, bought new less than 10 months ago, does about 26 to 30MHz, (don't remember exact offhand), flawless appearance and operation, peaked and clipped (one LOUD radio), open clarifier, etc.

Messenger 450 mobile linear, 4 pills, RX preamp, hi/lo TX power, looks and works like new, appearance is factory-new flawless, clean and not a splatterbox, draws about 22 amps.

The piece of paper that comes in the box is the governments supposed "Simplification" process. I agree that it is impossible to boil down the regs to a single sheet of paper and expect any amount of compliance or comprehension. My remarks were directed at the "I did not know" defense.

I do contend however, that those that are running some of the really neat, albeit illegal, stuff are pretty knowledgeable of the regs. As a ham for 44 years, I marvel at some of the ingenuity of CBers. A recent picture on here of a mobile equipped with 4 alternators caught my attention! While we are limited to 1500 Watts PEP, I personally don't know of a ham that has gone to lengths required to do it. I am sure there are some, however the biggest I have ever personally seen was a KW. I am curious as to what the biggest mobile CB is capable of.

I'm fairly new to cb's and I drive a truck. I am looking for something that will fill the role as a truck cb and also open up the door to dx-ing and freebanding that so many people here enjoy. Specifically I am looking at the unit on sale at exportradios.com mega tuned to 50+ watts for like 199.00. Later I will probably add the freq meter.
Is this a good rig and will it enable me to enjoy all the aspects of cb that you guys here enjoy.? And about how far do one of these thing reach normally?
Any info would be appreciated
Thanks

Arron,

I have been reading yours and n8wwm's post for quite a while. WhatI have seen is childish, playground behavior. Everything in the world has rules and at some point and time rules are either bent or broke without much harm to anyone. I do not agree with a lot of them but it in no way bothers me so I ignore them. People like you cause more problems in the world than do good. You should talk all of this energy and express it into something useful. You have got a list of legal operators upset with you that out numbers the list of illegals. I see your actions as a deterrent to the operators who are involved in the radio hobby. Most of them would rather not associate with the likes of you or any others like you. You remind me of the type of people who march street corners whining about abortion or other matters that do not involve them. I have my feelings about abortion, I would rather it not be but sometimes it just has to. But I would never associate with the people who waste their time on a corner for a couple of days and then drive off with their children in the back seat with out seatbelts. I hope you grow out of this because people like you will ruin the radio hobby and its

future.

> Most instructive.

Knew it would be. ALWAYS is.

> You have truly showed us what a TROLL is.

I surely have. It's STILL runnin' around calling itself a "Voobner". It's done some LYING and some SQUIRMING lately, too.

> Now people in this NG can see the vast difference between you and I.

Hey! I thought you had me pegged as an ally in your crusade!! You mean I don't even get a T-SHIRT??!! What a RIPOFF!!!

> One of us thoughtfully expresses his opinion in a civilized manner.

Even civilized assholes aren't thought too highly of... It takes more than G-Rated vocabulary enforced by your usenet provider to make a civilized manner and a gentleman, troll boy.

> The other (you, sir) merely delights in extended, pointless
> obscenity-hurling.

It's not pointless. YOU keep responding (in violation of your own policy, LIAR) and I keep beating the crap out of your stupidity-and-lies-in-civilized-clothing. You're weak and witless and here trying to make up for that by blaming everyone in sight. Like you did with me, and I didn't get an apology.

> If you wish to continue to sustain my attention, contribute something
> relevant to the discussion - or be ignored.

Respond or don't respond, I don't care. Just knowing that MOST people here get at least a chuckle out of your repeatedly reddened and blistered hide is enough for me. Trust me, young man, when I say that if you were not truly an obsessed, annoying asshole, I wouldn't waste my time on you. Since you are, I do. And it's fun seeing you remember how to squirm after these last few months of condescending, sweetly insulting and cock-sure confident trolling of this group and its many good and TRULY civilized regulars. YOU, sonny, are the ONLY one to blame for ALL your problems. Take THAT to the bank and get some interest on it.

> Sincerest As All Get-Out,

The only thing you're sincere about is your ego-stroking pomposity at the expense of folks who want nothing to do with you or your obsessive mumblings. I won't let you enjoy it, whether you make an attempt to defend yourself or not.

> Aaron H. Voobner
> (A Gentleman)

I'll take a group vote, and get back to you on the results. Meanwhile, you useless windbag, I'll be ack-acking your ego right back to the ground whenever it tries to get airborne.

Well, Fred, I am glad to see you do have a sense of humor. My personal opinion, is it was ALL lipservice. Now with Riley more than likely on his way out, or at least transferred to the Parks and Recreation Department, well, lets just say that unless one is an extremely squeaky wheel with repeated warnings, it's DX time!!! Too bad this solar cycle is waning a bit. With the current batch of goons vacating Washington, and Iran and Russia screwing around and pinching each others behinds, I seriously doubt we will see or hear any more about CB enforcement from the federal level, at least for the next four years.

428. New CB Radio THE President GW Bush.....

Newsgroup: rec.radio.cb
Date: 2001-01-02 22:21:34 UTC
From: billy22soap@aol.comyilz
Message-ID: <20010102172134.10151.00000030@ng-fx1.aol.com>
Source record: 66532

Here's the rundown of features on the new President GW Bush CB Radio:

A) Even though most people bought other CB radios, this company will never-the-less claim they have the "Most popular CB" ever made.
B) The instuction book is full of spelling errors, like "frekwenseesee" and "standing wave ratashio".
C) The volume knob is on the side of the radio, & the channel dial is on the back, because the instructions state that the current way of doing things is wrong.
D) The radio, of course, will be made in Red China, by EXXON, who was given a waiver of EPA rules & allowed to use PCB's in the printing ink, freon in the packing material & harmful solvents in the paint, & dump any unrepaiable units in the Alaska wildlife refuge.
E) The radio will include a registration card that will make it easy for the Republican Senators that wrote & authored most of the CB & Scanner restriction laws to find you.....
E)

WELL???
What are you waiting for? I temporarily suspend the ban on graphic files to this ng, both in your case with regards to Bikini Shots and to brass and his ride. Let's see them!

Make sure and use REGEDIT to make sure you're not infected. I ran
one the first time I got it and nothing happened. W2K seems to be
immune. I checked REGEDIT and searched through it for the virus.

I heard on the art Bell show about how he was a ham and lived in an
apartment and had the same problem.
He solution was to run 50 ft of coax through his ran gutters. He said it
worked fine.

You can only get "infected" if you open the attachment. Also in case no one else has noticed, the message always comes from the same sender, hahaha@sexyfun.net. You can use the Block Senders feature to eliminate all emails from that sender.

When I first got that email, Hotmail didn't know it was a virus.
I downloaded it and tried it. Nothing happened. I deleted it.
No entries in my registry for it. W2K would have asked for my
CD to replace the changed file before continuing. YMMV.

I also don't use Outlook so there's no address book.

441. Open Letter From Aaron Voobner

Newsgroup: rec.radio.cb
Date: 2001-01-02 23:48:22 UTC
From: "Mr. Aaron H. Voobner" <aaronvoobner@my-deja.com>
Message-ID: <92tpc2$r43$1@nnrp1.deja.com>
Source record: 66546

Gentlemen,

Last night I discussed this whole situation with my wife Ludmilla. I told her that assorted miscreants, newsgroup trolls, and illegals had threatened my right to express opinions that uphold FCC legal operating practices in a public forum. Of course, threats alone have not ever and do not now deter me in the least. However, I explained that as the result of vandalism (someone has messed with the counter again) and sad obsession on the part of a fair number of ill-willed individuals who support illegal CB, our family web page was now the focus of widespread derision and god knows what other sick goings-on by these same anonymous criminals. I confessed that it troubled me to the point where I considered removing the page from the web.

Ludmilla (who is from Brescia) surprised me by insisting that I not remove the page. In her broken English, she explained that it would be giving in to the people who want to see illegality triumph. It would signal that the situation is hopeless to all those who are hoping and working for a Citizens Band free from the pointless anarchy and lawlessness that pervades it. Then she reminded me of something my dad, Abner told me shortly before he passed away. He said, "Aaron, the grass is always greener when you remember to water it". I interpret this to mean that we cannot simply sit around wishing for a better world, we must actively cultivate it.

Perhaps then, I am watering the proverbial grass in rec.radio.cb to see what grows. One of my critics compares me to a busybody protester picketing an abortion clinic. I'll tell you my honest opinion, if someone feels so strongly about abortion (or any issue) one way or another, I think they not only have the right - but they have the duty to go out and picket and stand up for what they believe in. My oldest daughter Winifred once had a situation where another child had stolen a package of bung nuts from her school lunch. This child attempted to intimidate her by saying that it would do no good to complain because they would never be caught. Needless to say, Winifred complained and the culprit was duly punished.

And so the bottom line is that I will not be leaving this NG. And the Voobner Family web page shall remain on line, at least for the time being. You in rec.radio.cb have unwittingly (and by your own actions) selected me as the lightning rod for controversy in the legal vs. illegal CB debate. I shall continue to call into question illegal practices as I see them. I shall also continue to praise those (e.g. Mr. 137) who have rejected the world of illegal CB and begun to think for themselves.

Sincerely,
Aaron H. Voobner
(A man not to be trifled with)

IMO, it's fun bagging on them for awhile, then it, like a lot of other things, gets boring. I don't think anyone has become obsessive about it. I had a little fun for a bit, then, it was in the kill file for the lot of them, including their butt-buddy apologist, The Professor. His fawning attitude towards them was the sickest of the bunch.
Now, if everyone else that I read would just stop replying to them...

Hello Tim: All ya need to do is run a 4 element Quad, with a Mastodon 5000 over the top of the Quad. This can be done with a heavy duty rotor mounted inside the tower assembly, while using a thrust bearing at the top of the tower. Also got to use a good piece of vertical mast.

A lot of hams run mono band beams this way.

The Quad Beam (from Signal Engineering) has both vertical and horizontal polarization. If you look at the old PDL-II, and the Signal Engineering impedance matching devices, you will see a pretty slick Vert and Horz impedance matching device. You simply run a coax for vert and one for Horz, and are able to switch in a instant from vert to horz. And with a Quad you may not need a additional vertical, unless you want a omni directional antenna also.

Jay in the Mojave

Tsk tsk. I know that there are a few hams causing some misery Dave (or Debby). The way I look at it there is a tremendous amount of money to be made here if anyone is interested. After reading (carefully) the various slams going back and forth - and noting with interest some posts about modulators - I think you have a SERIOUS money making possibility here. Consider this carefully ... I note with interest the posts on modulators (you carefully control the negative peaks and increase the positive peaks, thereby increasing the loudness of the radio). Since no one would be interested in a 500 watt amp that is 100 KHz wide (since only about 1/20 of that power, or 25 radiated watts would be in the passband of the receiver), these devices must work and have an interesting possibility. If you control now the POSITIVE peaks and run that through an audio amp, you can increase your average power without clipping! Think about it - without clipping to contend with, you could hook the circuit to a 50 watt amp in your car or truck and make it sound like a 200 watt amp! If you do this successfully (this will not be easy, I am sure), you could sell this to the aftermarket for car/truck stereo systems! You folks should join forces with N8WWM and others instead of slamming them; there should be plenty of money in it for you all! Of course, I can't for the life of me understand why the stereo manufacturers haven't figured this out yet, but if I give it careful thought, I'm sure I'll think of something.

As a former funeral-service professional, I can vouch for this tongues-not-for-killing-people theory. Guns, however, are COOL and help one to defend oneself, which is also COOL. They also allow one to make holes in paper at great distances and, of course, you can hunt with 'em and take pictures of yourself in camouflage with them to put on your webpage. Sorry, I have no Delta Force mods, but if I DID have 'em, I'd post 'em.

Yessir, Guns Are Cool,

Sea Captain Deadbeard

Doug and Mia,

Thank you for your support. You, I, and a growing number of others are sick and tired of being run off of 11 meters by "trash". You are not the first to have written to let me know of your support. I will do my best not to disappoint you.

These CB trash think anyone who doesn't want to help them screw up the airwaves is a "troll". In any normal world THEY would be the trolls. But not in rec.radio.cb. Here, they are held in high esteem as "heroes".

Many of the worst trolls (and one in particlar that I've heard the others "recruited" and paid specifically to attack me) think they are besting me via a barrage of foul and obscene remarks. It is worthwhile to note that these same people could not put together a coherent thought lasting longer than two sentences. They can't seem to express themselves without obscenity. So they had to hire a professional internet troll.

Yes, there are such people for hire. And it's too bad they had to bring them here to rec.radio.cb with the purpose of trying to quell discussion of legal CB. I assure you, they will not get far.

Sincerely as always,

Right...for future reference it's a VBI (Very Bad Idea) to download and launch attachments you get by email. It also sounds like you don't have any anti virus software which would be a VGI (Very Good Idea) to get. Whichever email program you're using you should be able to tailor it to your individual preferences.

Yeah I see some reason for what you have to say. I have one question. Are you employed by the FCC or just a right hand? Just curious, not trying to be a jerk. I think its good to post a picture of a rifle because this may somehow cause people to look the other way now or make it a more serious problem. Don't worry, If someone lets say "bring it on" thats fine and again its not. I see you are studing to be a ham but the NW8MM says you already are. Are you pissed that 28mhz has its problems? Once again only a question.... Every band that I see has its problems mainly 80m and 160m. Seems that 27 has its problems but some of the language even I could do without. Yes I am against abortion but I love to hunt. Just thought I would throw a few words out in your direction. The worst is not just the hams but some of the hams "just a few I know running 6kw, but guess anyone on 6,10,20,40,80 and "160 not advised" can run that stuff. I see that everyone wants to reclaim a portion of the 27mhz to 28.XXX band and why not just take the entire 1.2ghz band. Tell ATV links to relocate. Shesh, and yes I am a diehard CB'er of 20 years.

Sierra Tango 151 Atlanta, good day and god bless. PS: What do you think of new people here in this NG think of all this garbage thats posted......

Thank you Mr. Classic,

I do appreciate you having the courage to brave the climate of fear and hate that some of the illegal contingent has created here in this newsgroup. Sadly, I can count the pro-legal CBers of the group on one hand, i.e. Mr. 137, Doug and Mia Friel, and Professor.

Yes, in a way, I am associated with the FCC, however, I will not inflate the nature of my relationship with the commission, it is merely

advisory, and I have no power or jurisdiction, nor would I want any.

Re: my military service. Yes, the weapon seen in my photo was typical of our armament in BnSecurOps USAF. I carried the SAW on a lot of operations and got know it well.

Problems on 28 Mhz. Yes, I have heard truck drivers and others blatantly hooting their mouths off in the amateur bands. Discouraging. I blame the export radio dealers and manufacturers. The radios are designed for illegal CBers in mind and there is no reason that they should be sold. And the illegal amplifiers, too. Don't get me started.

You also mention N8WWM's postings. While I support his pro-legal stand I do not think that blanketing the newsgroup with obscene multiple postings and personal attacks is the ideal method to gain support and allies.

Even though some of the geniuses on this NG go out of their way to provoke people like him. They also seem to target hams. No, I am not a ham. But I am studying for my test. My plan is to go right to Extra Class, sort of a personal goal of mine, lofty as it may seem.

But back to the miscreants of this newsgroup for a moment. You know, sometimes I don't feel TOO badly for them being taunted by N8WWM. From what I can tell they are a lot of miserable cowards looking for excuses to justify their illegal behavior. They were even at one point afraid of my Uncle Fernald. Can you imagine? Afraid of a 60-year old man? It's true. Read on for the amazing details.

A while back some of the low-lifes in this NG were plenty pleased with their professional asessment of my given name. Some of them (e.g. Scott Unit 69) spent hours and hours searching the Internet for clues to my life.

"There are no Voobners" they boasted, confident they had the scoop on the entire Voobner controversy. Picture it. A bunch of 20 year old delinquents and a few toothless hillbillies with jail tattoos searching the web. Then I offered to set up a real-life meeting for one of them with my Uncle and Aunt.

You should have seen the backshuffling and scrambling that took place then. Needless to say, not one of them took me up on my offer.

Lately they have taken to messing with my family's web page, resetting the counter and doing other mischief. Pay them no mind.

I don't.

Thank you again for your kind post,

Sincerely,
Aaron H. Voobner

> Martin N5PZJ-a great source for trivia!!

Damfino! Hell, I don't grok DXers or contesters either. Following in the footsteps of RCA Globecom is sex on a stick but it don't make you Mr. Wizard or even Harry Potter. I am twisted enough to have more use for the local Red Green who converted his snow blower into a generator/battery combo for Field Day complete with a push-button to get starting voltage for his GM alternator and Rube Goldberg muffler arrangement. The nice thing about Field Day is that you can tell your wife you are participating in this highly important emergency drill when what you are really doing is going out into the woods to drink beer and talk dirty so long as the site has indoor plumbing or a first-rate privy.

Why do bozos show up on the net. I guess they got tired of talking to the drive-thru lady at Mac and Don's. What is really more amazing is that we seem to have an endless supply of bored gnomes providing them an audience. Trolling and bagging on this newsgripe is easier than working a W6. You don't have to round up the usual suspects; they volunteer.

When you gonna take the Extra and go down to the club to irritate the hemorrhoids with cryptic comments about 'real radio'???

Dick N�BK -- that's Bionic Klutz, son.

"Mr. Aaron H. Voobner" <aaronvoobner@my-deja.com> wrote in message
news:92u6gi$5sj$1@nnrp1.deja.com...

> Thank you for your support. You, I, and a growing number of others are
> sick and tired of being run off by "trash".

Tough luck. It seems LOTS of OTHER people find you a stark raving LOONEY.
Yes, all three of you have the personality of bent shit-cans and the
intelligence to match, and are routinely run off even from the city dump. It's
not the "trash" at the dump running you out. It's the night watchman who
doesn't want you scavengers disgracing the dump. You probably think he's
threatening you, as you are 3 paranoid looneys.

> You are not the
> first to have written to let me know of your support. I will do my best
> not to disappoint you.

Newsflash: Voobner had a friend once.

> These CB trash think anyone who doesn't want to help them screw up the
> airwaves is a "troll".

Nope. You're a troll because your only purpose on the group is to bitch and
complain about CB. I don't want to hear it.

> In any normal world THEY would be the trolls.

Would you happen to be "The Undisputed King of Cool" in any of these "normal
worlds"? Thought so.. <ahem>

> But not in rec.radio.cb. Here, they are held in high esteem as
> "heroes".

The word your skull-fucked brain is trying to find is "FRIENDLY". This word
might seem to be a THREAT to you, but that's because you're A LOONEY.

> Many of the worst trolls (and one in particlar that I've heard the
> others "recruited" and paid specifically to attack me)

I was paid ONE BILLION DOLLARS by MARK FULLER to flame you because he has heard
of your recent nervous breakdown and considers you a weakling and a looney. He
said to call you a "fuckhead". You're a Fuckhead.

> think they are
> besting me via a barrage of foul and obscene remarks.

Wrong. I AM besting you no matter WHAT I use as remarks. Basically, my Flaming
Style beats your Retard Style anytime, anywhere, in any forum, ask anybody.
Just look at you. You're a jibbering mass of horseflesh quivering in FEAR.

Pathetic. Weakling. LOONEY.

> It is worthwhile
> to note that these same people could not put together a coherent thought
> lasting longer than two sentences. They can't seem to express themselves
> without obscenity. So they had to hire a professional internet troll.

You sure enjoyed being "big man on campus" while it lasted, huh?
Since you can't believe anyone could possibly think you're a jackass and flame
you for it without being forced or paid to, I leave you lying on the floor
giving off smoke in your usual wrongness.

> Yes, there are such people for hire.

You GOTTA be kidding. A fucking newbie puke like you thinks flames are for
HIRE? Here's another clue, dumbfuck - Friendly people don't need to pay. They
don't even need to ask. Flames fly from me to you solely because of my CONTEMPT
for your disrespect of nearly everyone in rec.radio.cb. You sound like a broken
man. Did I do that to you? Fucking loonie. You deserve it. YOU BEG FOR IT.

> And it's too bad they had to bring
> them here to rec.radio.cb with the purpose of trying to quell discussion
> of legal CB. I assure you, they will not get far.

Now it's "THEM"?! PARANOID LOONEY. There's no quelling of legal CB going on.
Just quelling a malcontented NONSTOP-COMPLAINING WHINING INSANE BASTARD. You.

You're WRECKED AGAIN,

Sea Captain Deadbeard

Two of them are marine radios (Icom M-710, Uniden MC-120. And yes, I live near a marina and own a boat) one is a CB (Cobra 19DX, unused), the others are a scanner (Bearcat BC-350A) and a wide range receiver (AR-3000AB), respectively.

"Hours and hours." Just because you post from AOL and get kicked off every time you hit one million on the byte counter, doesn't mean a damn thing. If anything, I spent two minutes doing a quick directory search. If you weren't a low life, you could afford a real internet connection, not an AOL bastardized version. This took more time to type in then I spent searching for "Voobner" on the 'net.

Roger that, guys. A quad is a truly nice antenna. It has, however, a couple of weaknesses, the worst being very sensitive to high winds. A ham friend of mine built a 4-ele four-band yagi on a forty-feet boom, and he got some outstanding reports from far away places. Next spring it was rendered useless after a few bad winter storms. It collects a lot of frost, too, but if you live in the Mojave, that shouldn't be too serious a prob...
If you decide to build one, make sure that all the materials used are real solid. 73, Gary

I just picked one of those (51/2') up today, as a matter of fact. I always did like my "Amazer", but, as with my 102" steel whip, I got tired of being a non-paid tree pruner for the City of Ventura! I'm going to install the 5½" footer tomorrow. If anyone is interested, I'll post my observations about the swap tomorrow.

Reading about the two vehicles, I agree with your assessment of the other fellows pickup, but IMO, the placement of dbb's antenna sounds like he would expect the opposite result, i.e., if he has the mount to the front of the sunroof, then his signal will want to be directional towards the rear of his vehicle, right? I drove a Mazda version of the Explorer Sport for several years and I can tell you from experience that mounting the antenna between the windshield and the sunroof is not the way to go. I totally agree about the ignition/fuel pump noise problem, with regards to Fords. I've had a 90 Ranger, the Navajo, a '95 f150 and I now have a 97 f150 and a new Escape. Same with all vehicles. Noise for days!

There is a serviceable little dipole marketed by Workman (and others) that does pretty darn good for local transmit and okay for DX receive. I have one on my wall as I type. At night, when the noise level is down, I can get out to Fillmore from Ventura (17 miles). I don't become Mr. Channel master, but they can hear me. I run a legal, sorta, station. ;-)

I am in the market for a new CB and i have about 120 dollars to spend. I have to use this CB at home. I dont do much travelling at all, so a mobile in the car is not an option. I need this for my house.

Anyhow, I have considered buying a handheld with a strong antenna or someone has suggested I get a mobile and use it at home. Is that usual to use a mobile at home, and would it be safe to do so?

What would be my best option for a home CB?

OK ONE37,

I know you need to "fit in" with the group. But I also know you
probably will still continue to operate 100% LEGAL. So it'll be our
secret (wink).

Cordially,
Aaron

No it doesn't. It means the wrong instrument is being used for the test. A
RMS meter measures RMS best not PEP. Once the needle starts to move up or
down the accuracy of it's reading should be questioned.

Hello Barbequed Chicken: I bought a lot of 12 of them a few years ago. They will take all the heat. But you half to keep an eye on them if you have it mounted on top of a vehicle and it hits all the low lying tree's, cable TV Lines, power lines, brides, ect. My 4 pill smoked off because the Francis broke off and I did't see it. So I had to put the 8 pill in line. Be advised!

The Francis takes a lot of abuse hitting all the low lying things. But I may just put a 102" stainless steel whip on the 4X4 truck. The Francis is mounted on top of the cab and works great!

I'm at a loss as to why you would bring this up... but I remember when
this happened... this happened when my former business website,
http://www.chucks2way.com was in it's heyday.... and believe me folks,
there's nothing that can quite match the feeling in your stomach that
you get when you recieve an e-mail from the Vermont Divison of the
F.B.I. (i wish I still had the original e-mail.. or I'd post it...) it
was like one day, I was reading about this guy and the next, I was
getting e-mails asking me to comment on his death, and believe me, it
got very real for *this* former dealer... one of the many reasons why
I shut my website down....

take it from someone who knows...

507. FRS Test Friday in North Carolina

Newsgroup: rec.radio.cb
Date: 2001-01-03 12:21:20 UTC
From: qrm2000@aol.com
Message-ID: <20010103072120.12402.00000872@ng-ma1.aol.com>
Source record: 66557

When: Friday, January 5th. Noon.

Channel: Ch-1, Code 0

Places:
Grandfather Mountain. Bill from Gastonia will be on the mountain at noon with the Radio Shack Mobile and a GMRS radio.

Pilot Mountain. John from the Salisbury area will travel to the parking lot atop the mountain. His equipment will include a scanner hooked to an 8-element Yagi. In addition to FRS, the station on Pilot Mountain will have CB-15.

Others are encouraged to participate as their work schedule allows. The WX forecast is for clear skies and moderate temperatures. It does not require any special equipment to join in. Besides your FRS, it is helpful to have a state roadmap and a compass. This allows you to calculate the approximate bearing to the test stations and to be sure that you have a clear view to the horizon in those directions.

As an alternative to having a compass, you can get approximate bearings using the road map as a guide. (Or, if you have an analog wrist watch, turn it so the hour hand points to the sun; then the numeral "6" will be on the north side of the watch face.)

If you participate, please report results here--even if you only heard the test stations and were not able to contact them. Thanks.

That TV antenna and Phone line & ISP service for truckers at truckstops went bankrupt recently, I hear.

What caused this? Was it the lousy way they treated their employees that brought God's wrath on them, or was it the Govt. controlled economy trying to crunch out Independant Truck Drivers that also affected this PNV Company? Or was it something else? If YOU know anything please post. Thanks Dave!!!!!!!!!!!!

Hello Tim: Great Web Site looks like your havin a great time. And the Honey hangin all over ya, Yeah! I don't see anyone else with a bitchen web site, with Honies and goings on.

I like to pull a cork every once in a while, say Monday thru Sunday, either along or with someone. Remember when the designated driver could only have 8 drinks!!!!!!!!

Yeah I know about the extra PR and I don't even have a web site.

AA meetings are ok I guess, but you can't get a drink there, ah?

You younger guys do your par-taing with moderation, in my days of mass quantities guzzling, the girl would have been Tango Uniform by then. Any way she's a looker alright.

I don't have the time to look all over the ng as I did before, but glad to see the younger guys keeping up the Great American Social Events.

The local boys are ah talkin about a CB Break, Shoot Out, BBQ, Oldies but Goodies Dance, Short and Medium range shooting competition, and a Classic Car Rally in a few months. You will half to slid on out and get in there and amounist them, ah? Maybe ya can bring your Honey friend too!

Jay in the Great Mojave Desert, ... just down the road ah ways from the fillin station.

I don't think he has to worry about brain damage... he must already have a substantial handicap. Mounting RF transistors to a steel cab roof is a very poor way of dissipating the heat. Steel is a lousy heat conductor... and he'll probably be frying those devices before long.

Greetings!

You got one of those Tree trimmer accessories too eh? ;-)

One day, I lost 6" off the top of my Amazer, wouldn't you also know
it, was raining that day too. Ruined the wiring of the antennas
internals.

And since it was more than a year old...sigh.

Hey, I got for info about those antennas and how they are constructed!
Since it was already apart, took a peek inside...

Can post it if anyones interested...

On Tue, 2 Jan 2001 23:11:23 -0800, while the modem was ice fishing
with the Mouse, "Jeff Mayner" <bk43@pacbell.net> dissertated the

Greetings!

It's like the old adage, people ask for information. If information can be obtained, supply it. If you can't - then simply don't post extra bandwidth.

People asking for information is one thing, how they will use that information is a personal choice. It's simply none of our business what they do with it.

Arron takes a stance against illegal activity. Well, then let's post this postulate...

If someone wanted to know the wattage capacity of an antenna, would Arron care? Would he flood their Email box with - DON'T DO IT! type of spam? I hope not.

Or how about...

If I asked about how to unlock a clarifier? Would Arron fill up the NG or the mailbox with tons of useless drivel about the sanctity of SSB and how we shouldn't mess with it?

I hope not...

People know a lot of different techniques about different things, not just CB radio. And many use those techniques to avoid hassles and persecution. Are they violating my rights? As long as they keep it to themselves, no. It's none of my business.

Why waste my time?

Arron must have some problems with his radios receive, otherwise being a mud duck is really not that bad.

You can do a lot with 4 watts...I know!

I know a few things about a CB radio...
Does that make me a bad person?

On Tue, 02 Jan 2001 13:54:47 -0500, while the modem was ice fishing with the Mouse, Sea Captain Deadbeard <goldberg-no-spam@cotse.com> dissertated the following:

Source record: 66576

Greetings!

At least 500 watts, the tip does get warm though.

Smaller conductor at the top - tends to remove heat slowly. Doesn't dissipate heat well due to fiberglass acts like insulation to thermal - not RF.

Shouldn't be a big problem, now if it was a Top-loaded clone, I've seen the solder used to attach the wires to the tuning tip get hot enough and soften to cause the tip and the winds to separate.

On Wed, 3 Jan 2001 05:30:58 -0500, while the modem was ice fishing with the Mouse, "Barbequed Chicken" <squeezehack@hotNOSPAMmail.com> dissertated the following:

There is no "mod" for the HTX-10. It was specifically re-designed for RadioShack with a "10 meter only" non-modifyable chip. You must buy the non-RadioShack versions of the radio (Magnum 257, Titan mobile) in order to get the version capable of 25.3-29.7 Mhz

...there aren't any. Radio Shack got burned so badly by the HTX-100 that their new equipment being sold has no mods. You used to be able to cut/add a diode, cut a PC board strip, etc. to turn on and off features for "exporting." Their new rigs user CPUs that are burned at the factory and cannot be reprogrammed. Same goes for most of their scanners. Too bad, the HTX-100 made a great rig for a transverter.

Miles go hit the showers you are lost, a radio can swing backwards on RMS and it will still go forward on a PEP meter. And what the hell does a PEP meter have to do with a radio that swings backwards on rms??? So I guess i should throw away my Bird Peak reading meter. Why should the accuracy be questioned? Please explain?

Maybe I can explain the difference simply. A 100% AM modulated signal, will have a peak power level of 4X the dead key level. A peak reading meter attempts to follow that peak "swing". So unless you're overdriving your radio to the point of having no more headroom for modulation, your peak reading meter had better swing forward. But if it isn't swinging forward to at least 4X the dead key wattage, you are most likely beginning to overdrive.

An RMS meter, more or less, averages out the peak and negative trough section of the modulation wave. If the modulation is symmetrical (balanced), then in theory the RMS wattmeter should not move at all from dead key to full modulation.

Excessive forward or backward swing on an RMS meter is indicative of an unbalanced modulation waveform. Some likely causes of this include:

Forward swing due to more peak power than negative power due to the negative trough being clipped at zero (you can't go lower than zero), while peak power is allowed to rise significantly higher than 100%. Normally occurs when modulation limiters are clipped and the peak rises well above 100%, while the negative cannot go below zero. This condition is the cause of most splatter.

Backward swing due to there not being enough peak power to cover the negative trough power. This usually occurs with peaked up rigs that cannot supply enough modulation power to handle the increased carrier power, or an amplifier that is being driven too hard. A properly set up amp should never backswing.

Clear as mud?

You need to spend more $$$$. I have a Classic Cybernet AM base NOS for $150, the antenna for $60, and $20 for coax. Or you could get a used mobile on a 3 amp power supply or more.
Dave

"Gremlin" <barry@airmail.net> wrote in message news:67C38A840432627A.53026F16AE7D633C.9BD399D7CF5BF64F@lp.airnews.net...
I am in the market for a new CB and i have about 120 dollars to spend. I have to use this CB at home. I dont do much travelling at all, so a mobile in the car is not an option. I need this for my house.

Anyhow, I have considered buying a handheld with a strong antenna or someone has suggested I get a mobile and use it at home. Is that usual to use a mobile at home, and would it be safe to do so?

What would be my best option for a home CB?

Gremlin

Radio station? Isn' t that a sex talk-TV show with Dr. Drew and his side-kick Adam? Might even be on MTV, not sure, have to ask the kid. It's probably distributed over the air in many fashions, syndication, etc., like the Stern show. Take the good doc's advice with a grain of salt, at times (anytime it is a nonsex question) he is classic textbook without a clue other than what he reads.

Source record: 66598

Hey Steve.....I tried to reply to your email but got nowhere.
If your Turbo is on 26.000 or 32.000 every time you turn it off and
then back on, chances are the battery is dead.
There is a small battery located behind the LCD Display that
holds memory that is most likely dead. Take off the top cover and
you will see a silver shroud around the rear of the display. Take
off the four small nuts and remove shroud. You will see the battery
(size of a nickel) and usually got a green wrapper on it. This is the
place to start and a common problem of one the age of yours.
Pick one up at the local CB shop, or better yet, let them put it in.
The Phoneman

546. Cobra 138XLR FS. whats it worth?

Newsgroup: rec.radio.cb

Cobra 138 XLR mobile cb looks brand new in the box. has upper and lower channels on a little switch on the side of the radio. the radio I would rate 9 and a half out of 10. This radio has been well taken care of. a friend of mine bought it from an older man who died he has had it for a year now and he hooked it up and it works like a new one and looks like a new one too. when he got it he took it for a tune up at the shop and has recently been back for its yearly tune up...just to make sure everything is ok. Asking $50.00 plus $5.00 for shipping. Will garentee it to work when you get it or your money back.

Thanks

buy a 80-90 dollar mobile with a good noise blanker, get a 3 amp power supply from Radio Shack, and put up any reasonable antenna you want. You can make a good antenna for almost nothing if you follow instructions. DO NOT waste your money on a handheld. They will transmit about 200 yards if you're lucky. Trust me on this one.

I agree on the basic handheld; probably a waste of your money if you aren't using it for camping or outdoors use!

A 3 amp supply from the shack will run at least $30. If you have an old Personal Computer laying around, yank the power supply out. Hell you can even leave it the case. All of the various yellow power cords have 12Volts/8Amps; use any of the black for the ground. May save you 30 bucks or so.

Making your own antenna is a great idea, but you can purchase a 9ft steel whip for just about the same amount it would cost to make even a simple dipole, with a lot less hassle.

1.Check out the picture of his "uncle" blow up the frame in photoshop and look at it you may be surprised.
2. n8wwm, voobner, and seacaptdeadbeard are all the same person check their posts again and you will see exactly what I mean. This is one big spoof and we all got sucked into it!!!!
3. Read the html code of Voobners page and note that his picture is labeled "aaronmp.gif" aaron said his uncle was an MP not him.
4. Also look close at that picture of him with the gun he is in a ship you can see the hatch behind him. I thought he said USAF????
5. The picture of aarons radios there is a bearcat scanner that is the wrong model than the one he named. also there is a walkie talkie of some sort he didn't explain.
6. Look thru the article he posted about Chris the kid who got blown up in Vermont and then note the name 'Goldberg' in Sea Capt deadbeard's email address. See anything fishy????
7. Time of postings for n8wwm's posts, Deadbeard's and Voobners posts NEVER overlap.
8. Voobner referred to bung nuts if you do a search of the web there is only one place in the entire universe that the term shows up anywhere at all check it out.
9. Voobner family page has a hotmail email address but it is a phony link actually connects to deja.
10. The town of Jinnsk is mentioned in a book about the submarine war Blind Mans Bluff how is it that Voobner ancestors are from there suddenly.

Aaron (or whoever you are),

Which of us are screwing up the CB band? How can you make these assumptions? I blame it on the atmospheric conditions. I know there is illegal activity on the 11 meter band as well as others but why would you want to waste your time worrying about it? If you took every linear amplifier away you would still have the same problem on 11 meters. People could no longer use an amplifier to "get out" a little better and more beam antennas would go up, it would not change much. I think it would get worse because people would be in the privacy of their home where they could freely enjoy alcohol without the worry of a DUI allowing them to really screw up the band. I personally think you are doing this for the hell of it. It sure does look that way, no one in their right mind would be so concerned with something so minute. The reason I believe this is because you said you were planning on getting your amateur license. Why have you not already done this? Seeing the gripes you have about the CB I doubt very seriously you could stand more than 1 minute of listening to it. If you did and started the same stuff you do on the NG people would ignore you and I bet you would deadkey and preach even while others were talking, this would put you in the same shoes you accuse everyone else of wearing. Get the point. You make no sense to me. I think you are doing all of this for your own personal enjoyment. If you truly want to get your "ticket" then why not direct all of this ambition towards doing that? You could have aced the extra by now.

It started out that the moron that installed the radios in the
harvesters hooked up the power leads backwards (on all the
harvesters), so I had a lot of rectifiers to replace. When I got
around to the one with the dead porcupine, there were just a bunch of
farmers standing around trying to figure out how to get the thing out
of the chute. So I just bent a hook on the whip and fished it out. I
don't like to say anything bad about farmers, but maybe there is
something to the term "pea-brain".

The impedance given was 25 ohms. That is, 25 + j0 ohms.
If the impedance were reactive, there would be an imaginary
component. You cannot say 25 + j0 ohms is reactive.

> The RC
> value will play a role in antenna installs that cause feedpoint

You are talking nonsense. You're simply throwing out buzzwords.

What if the antenna impedance is 40 - j30 ohms?
What is the RC value?

> Sparky, FLRC

Oh, OK. It is reflection coefficient. Reflection coefficient
is conventionally represented by the Greek letter rho. It looks
like a small 'p'. "RC" is a term generally referring to a time
constant determined by a resistor-capacitor combination.
This non-standard representation combined with Handy Andy's
disjoint claims confused me.

OK, in light of that, let's look at what Handy Andy wrote:

In article <d1eq4tk53al6gauc1gtbin67l0chv0n6qs@4ax.com>,
codyspc@iserv.net wrote:

Absolutely false. Even a purely resistive load has a reflection
coefficient.

> In a typical install, the RC value is important. We see SWR issues
> thanks to that value - and pertains to coax lengths and antenna
> reactance.

SWR is just another way to express the magnitude of the reflection coefficient.

Just about any good mobile will work well in the home. My suggestion
is to save your money on the radio and get some good feedline. And
build your own antenna. All the base antennas I have built, even the
indoor antennas, have worked better than all the ones I have bought.

Oh Lord, this has got to stop. I am getting a headache from it all.

Some of the speculation in this newsgroup has gotten entirely out of hand.

In certain cases, obsessive-compulsive personalities (who shall remain nameless) have traversed the border from mere curiosity into clinically disturbed behavior. At least one of them has undergone a rather dramatic personality change from a hired troll to a very ill individual who spends hours a day writing tracts in an effort to "expose" me.

(If I may indulge myself in a moment of drama here to illustrate)

SEA CAPTAIN QUEEG: (nervously rolling steel balls in hand) "....Ohhh he thought he could fool me, pull the wool over my eyes, (CLICK-CLACK), but you saw it. You all saw it. It was the COUNTER incident...(CLICK-CLACK)...that's where I really triumphed ....Oh yes the counter incident...(CLICK-CLACK) I proved by...s-s-s-scientific logic...that he was deceiving me...lying to me....(CLICK-CLACK)"

Another one (who shall remain unidentified for his own safety) has got the sum total of his entire computing resources dedicated to examining the minutae of my life. He is poring over photographs on my family web page into the wee hours of the night, looking for god knows what.

(Another moment of drama if you please)

SCROTT UNIT 96: (peering into an electron microscope) "Aha! Now, I've got you Voobner! The DNA strands of the HTML code in your website are an EXACT MATCH to OJ Simpson's! Wait until Marsha Clarke hears about THIS!"

There are still others who have concocted elaborate theories about me being at least three other people, with three other separate personalities. If this were true, I'd have to be posting to this NG 24 hours a day, which I have no desire or capability to do.

I was thinking about this earlier, how people, if left to themselves, will manufacture all kinds of wild stories along with the proof to sustain them. Like when Paul McCartney of the Beatles was rumored to be dead. There were thousands who came up with the indisputable "proof" of his death by "seeing things" in album cover art and deconstructing song lyrics. Ditto for the "backwards masking" craze of the 70's when poor misguided fans played every record backwards looking for hidden meanings.

I will tell you right now, there is nothing to me other than I am an ordinary individual who happens to disagree with illegal CB and its

supporters.

As far as my family goes, take them or leave them. If you do not believe that they really exist or that the Voobner name is real, then so be it. All the better for them, as they'd rather be left OUT of this debate. Although I know that Ludmilla supports my activism and being raised in Brescia, she has no problem with controversy or threat of danger. However, I'd rather have you all focus on the issues at hand, and not details of my personal life.

Sincerely,
Aaron H. Voobner

Huh? If the SWR is 3, then what is the magnitude of the reflection
coefficient?

No I just think it is a shame, that as a representative of Ham Radio
that you act this way.
SPARKLINGLY as you may think you are, you are still a smuck and if I
hear you on any of the bands acting as such I personally will drop a
dime on you!
Unfortunate for me I probally won't ever hear you because your to
busy bashing folks here instead of applying yourself to the code,
I don't condone illegal activities however the MIGHTY N8WWM
really is setting an example of how Ham Radio operators shouldnt be.
Quick Poll from Hams who frequent this forum,
Are you tired of the way N8WWM represents us?
if so let him know.

Let the enforcement folks clean it up! I DO NOT Condone illegal
activities but it is not our responsibility to try to police this
bandwidth, let the folks we pay taxes for do the job. they will get it
done, it is going to be slow but it will get done. the MIGHTY N8WWM
Hanging here making a ass of himself can't and won't get it done
with your daily dose of ignorance.
You certainly aren't making any brownie points within the amateur
community. I am ashamed to be ranked in the same hobby as you with
this childish behavior.
Your postings using this common C.B. slang/mentality shows where you
came from and where you still desire to be.
I am most certain some hams who read from this group feel the same
as I do, you indeed sir are a pimple on the ass of amateur radio.

Call me what you will,
but you will have to present yourself one day on all the bands and
when you do folks who read this group who are true to the hobby will
remember you as a man who has no manners and you may find you won't be

welcome anywhere and the group you bad mouthed regardless of right or
wrong might be the only place you can communicate.
Friendship through Amateur Radio.
N4JZH Donnie

don't forget the groundplane on that 9 foot whip

"Matt Deremo" <mderemo@mpowernet.com> wrote in message
news:0aM46.1803$KZ.247204@news.uswest.net...
I agree on the basic handheld; probably a waste of your money if you aren't using it for camping or outdoors use!

A 3 amp supply from the shack will run at least $30. If you have an old Personal Computer laying around, yank the power supply out. Hell you can even leave it the case. All of the various yellow power cords have 12Volts/8Amps; use any of the black for the ground. May save you 30 bucks or so.

Making your own antenna is a great idea, but you can purchase a 9ft steel whip for just about the same amount it would cost to make even a simple dipole, with a lot less hassle.

>rec.radio.cb and offer their opinion on this bill.

OK, you invited....I accept the invitation. I had no idea that this bill was even proposed, much less passed. I am going to contact the FCC for an opinion on whether it is enforceable at a local level.

If so.....Wooooooo Hoooooo! Wait until I catch the next SOB that wants to throw a 20 minute dead carrier, or force his/her favorite music on everyone on the 27 meter band, or wants to try to shoot some skip on channel 9 while I am trying to receive an accident report, etc, etc, etc.

We have an idiot in this area who's morning commute to work involves repeating "Bah, Bah, Boooey" on channel 19 for at least an hour. This is usually at peak traffic times when I am trying to give local information to out of state truck drivers and keep them off our "no-truck' routes. All I need is an official Okee-dokee from the FCC to remove his CB from his vehicle and slap a fine on him that he will be sacraficing his pension to pay!

As far as interfering with the neighbors TV, etc, I would probably knock on your door and suggest a filter or a reduction in wattage or modulation <wink>. Most CBers are responsible and considerate folks, and would do their best to stop the interferance.

Those that are boldly defiant, like the guy with 2000 watts of power and a directional antenna pointed directly at the church PA system, would get a cite.

So, whadda you folks think? Can cops enforce this new law, or should we leave it to the FCC, who are never around anyway?

To enforce this thing, you will have to have a local ordinance that fits the FCC regs you are permitted to enforce pretty tightly which more than likely, you know better than I do, also requires some high-level head-nodding among prosecutors, judges, et al before you are going to be let loose. Much like the city passing an ordinance that is word-for-word identical to the state statute, this lets the city pass ordinances that are enforced locally but reflect FCC regs. It just lifts Federal preemption in a small area.

Showing your lack of logic? If he has a boat, wouldn't it be a good
idea to have a radio on board? He did not say that he used the radio
from shore, he did not say that he used it for communications other
than an emergency, he did not say that he used it for private use, and
he did not say what frequencies were available on the radio.

Anything else you want to read into it?

Sparky, FLRC

Indoor CB antennas just SUCK (to put it nicely) if you use one you will find
your signal will stay really local! I would try the 50 coax gutter idea!

Well thanks for all the replys guys.I have done a little research on the tower at hand,and I'm not quite sure I'm going to pick up on the deal.The tower,a Hg70HD is a Hygain built tower.70 foot free standing crank up model.In mint condition BUT the company was bought by MFJ and apparently they have no interest or intention of manufacturing towers or parts for the older towers.So I would have to have all the mounts that go in the concrete pad custom made and I'm not sure I want to gamble on something like that(I do all my gambling on a four and a half by nine foot,felt covered table!)
PS. Jay,I still think if I do it I'd be better off w/a Yagi and a ground plane above it.
Again,thanks for the input.

Bravo Lenny!

You have described EXACTLY the reasons why this legislation was
designed.

I take it we can count you among the supporters of legal CB.

(Supporters of illegal CB will of course throw up the usual propaganda
designed to stampede legal hams)

Truthfully,
Aaron H. Voobner

626. HELP!with short wave radio opinion?

Newsgroup: rec.radio.cb
Date: 2001-01-04 05:29:44 UTC
From: "A.Bierens" <rusty@dccnet.com>
Message-ID: <3A540A48.CF7D4AD9@dccnet.com>
Source record: 66677

Hi there guys,
Just wondering if someone could give me a heads up on a beginners short wave radio?
I am new, don't have a lot of money but am interested in short wave radio, I do not need anything to fancy, so just wondering what you might

recommend in a radio either a new on or a few years old, I would preffer

a desk top or base model but portable would be ok as well.Digital display?,I have read on the net but its a little confusing and overwelming.
Yaesu?...Kenwood?.Radio Shack?
Thanks in advance for any help or advice you may have.
Russ

627. Cb color potts?

Newsgroup: rec.radio.cb

The picture on the wall behind the radios was taken from the site below and then edited.
http://www.inficad.com/~mfuller/kids/me00.jpg
I am telling you the guy is doing all of this for his personal enjoyment, the more replies he gets the happier he is. If we all ignore him or put him in the turd bin he will go away. I believe everyone ought to be a whole lot less defensive and it will really get his goat. I smelled a turd the first time he post. He has been here a while or he would not have known about mark fuller.

They are not "Pots" or potentiometers "or how ever you spell em"
The are tunable coils and osc, RF amp, Mixer, transformers, IF coupling,
Detector,
since most CB sets and tabletop AM broadcast radios use a 455Khz IF you see
much of the same.
Those colors go back to the early 60's

Would you please check any text book and find out that impedance (Z)= (r^2 + x^2)^1/2
ergo there are any number of combinations of R and X that will equal 25 ohms. I have no clue where you get the idea that impedance is at J0, but your just flat wrong.

The smoking remains of some Voobner whoopsed in msgID <930qlu$c46
$1@nnrp1.deja.com>...

>Leave it to the criminal mind to <-WILD APPLAUSE->

Aaaaaaand leave it to our Official Group Nutjob, "Aaron Harold Voobner" to make yet ANOTHER fool of himself RIGHT HERE IN REC.RADIO.CB!! Remember, Little Retard, you don't get to make the decision of who IS and IS NOT a criminal. You're just a two-bit delusional FRAUD pointing his little shitty finger at people WITH NO RIGHT TO DO SO!! YOU are a TROLL and this is JUST ONE EXAMPLE of our Official Group Nutjob, "Aaron Voobner", TOTALLY UNAWARE OF HIS ABSOLUTE LACK OF ANY AUTHORITY WHATSOEVER.

You other groups with Official Group Nutjobs ain't got NOTHIN' on OUR NUTJOB!! Did you know that *our* Group Nutjob thinks he is a "secret agent"? Are you aware that *our* Group Nutjob thinks he comes from "American Vikings"? BUT WAIT, THERE'S MORE!! *Our* Nutjob's WIFE is from BRESCIA!!! Yes, we here at rec.radio.cb are PROUD of our Official Nutjob because HE IS STRIKINGLY NUTTY!! He's a CLASSIC TEXTBOOK NUTJOB, not a "borderline" like SOME groups get! <-WILD APPLAUSE-> Thank you!! Thank you!!

Your Host,

Sea Captain Deadbeard

>Hi group, can anyone provide the 11 meter mod for the Radio Shack HTX-10 10
>meter transceiver?

Easy-to-follow directions:

(1) Box up radio in original packaging material.
(2) Return box to local Radio Shack as unacceptable.
(3) Receive full refund or in-store credit.
(4) Purchase a *real* CB, preferably legal.

When you transmit, you will be on 11 meters.

The cremains of "Mr. Aaron H. Voobner" <aaronvoobner@my-deja.com> wrote in message news:92t11a$4nl$1@nnrp1.deja.com...

> That's quite, enough. You've made your point.

Have I ever. Glad you're getting it.

> You have no right to drag Petulia Voobner or any of my family down into
> the low-minded septic tank that your postings dwell in. So let's leave
> them out of this.

Look, you melodramatic tear-streaked fool. YOU dragged "Petulia Voobner" AND your family
into it. Is it my fault that you use your family as human flameshields? The answer, dumbass, is NO. In the future, don't hide behind your 8-year-old daughter, you contemptible coward. You're just LUCKY I have a sense of decency and don't flame any member of your family but YOU.

> You are merely a common flame-artist with a penchant for colorful
> obscenity.

I agree wholeheartedly. It IS an art and you're crying about it because I'm succeeding famously in exposing you for the delusional idiot you are.

> And you will flame until your material runs dry (soon) and
> then be gone.

YOU'RE my material, nutjob, and until your finger-pointing nuttiness runs dry I'm going to KEEP ON busting your lying, pompous, snooty little bubble.

> I however, will remain.

I'm not trying to run you off, you terrified lump of creosote. I'm just having fun flaming you right off your imaginary high-horse. See ya in the threads, looney.

> Yours,
> Aaron Harold Voobner

Yes. You ARE mine. I OWN you. Dance, puppet, dance! =D

> PS> Perhaps I was correct in my initial assessment. Which one are you...
> Dennis #12, WildCat perhaps, or Sean?

Well, I remember #12, I vaguely remember WildCat and Sean, but NO, as usual you're wrong and paranoid. I don't own an amp, my CB is legal, I built a base antenna with advice from guys on this group, and UNLIKE YOU I ACTUALLY USE MY CB AND ENJOY IT.

I also enjoy flaming you because you claim to speak for legal CB. YOU DON'T. You're a total lunatic and legal CBers don't need your "me vs. the CB Mafia" insane stupidity. Get a life, get a clue and understand that I will stop flaming you as soon as you quit your trolling and grandstanding. Join in and talk about antennas or coax length and represent legal CB in a RESPECTABLE way like Sparky, Handy Andy, and LOTS of other normal people do. Leave off your trolling and harassing and I will have no reason to flame you. I think you're INSANE and incurable. Prove me wrong or you'll just keep on getting spanking after humiliating spanking. That's a promise.

You're On,

Sea Captain Deadbeard

You know Peakaboo I'm glad you posted this. I suspected this for a long time. Mark Fuller, Rf Enforcer, N8wwn and Aaron Voobner all share the same style. They all try to beat you over the head with the word "Illegal" like it should matter to you. They spend a lot of time in this NG with no technical input or or opinion. Their views are strictly legal or political. There is no talk about getting a licence so that you can run power or talk out of band. Aggitation only. They all say how bad the 11-meter band is yet they spend a considerable amount of time in the NG doing the same thing they so strongly oppose.

Well, maybe now some of the guys here in the group will believe they've been hoodwinked, bamboozled and played! We should be talking about amps!!!

Why you would want to remodel a transceiver to be illegal is beyond me.
However, posting a page to show others how to do it is nothing short of
unconscionable.

I, in fact, wrote several letters to manufacturers like Uniden, Cobra,
RCI, and Radio Shack complaining about the apparent ease of illegal
modifications to their products. Evidently Radio Shack got the message.

Damn, this is some real basic shit.....Slowly re-read my post. Do not throw your meter away.

Here is what I saw:

"most of the guys on the bowl swing back when looking at there signals on a rms
meter."

"Yes the ones who dont operate there radios correctly, most are non-technical
type older black men this is not a knock on them they dont know any better. I hear them brag I key up at 5000 and swing back to 2500, then i laugh but guys at keydowns who win usually swing forward they are not looking for clarity."

"a radio can swing backwards on RMS and it will still go forward on a PEP meter."

True.

"And what the hell does a PEP meter have to do with a radio that swings backwards on rms???"

See your first quote above.

"Why should the accuracy be questioned?"

First do your homework. What does RMS mean to you? How about P.E.P.? Do you think your radio swings forward because you are using a modified bird or you are a guru or both?

I've seen a loud radio sit still on a bird RMS meter. If you want to impress me, make that happen. Otherwise go to your room......

With a pile of dollars, of course, you could buy an Icom communications receiver, or a cheaper Sangean world receiver. If you invest a lot, you get good front end, sensisivity and selectivity. However, a digital readout and an outdoor antenna connector are two musts. 73, Gary

Hello Tim & 257: This is a good point Tim has brought up, about using a none ground plane antenna above a horizontal mounted Yagi Beam.

One of the Locals made a 5 element beam, mounted it horizontal, and then mounted a old Hustler 5/8 wavelength ground plane antenna with 3 ground plane radials, that are evenly spaced at 120 degree's apart, approx. 5 feet above the beam. The ground plane worked ok, but the beam was not directional as it should have been. Removing the 5/8 ground plane antenna with the 3 ground plane radials fixed the beam. Having the ground plane radials crossing the horizontal yagi beams elements caused the beam you act like a omni antenna instead of a beam. I duplicated the beams pattern distortion on the antenna program Eznec.

Eznec indicated that the beams pattern was significantly distorted from the ground plane radials, that crossed above the beams elements. I then modified the antenna in the program to have 4 ground plane elements, and placed these 4 elements parallel or in line with the beams elements and boom. The beams pattern was slightly effected, but in very small way, and the beam was now usable.

I then moved the 4 element ground plane antenna from 5 feet to 10 feet above the beam, while keeping the ground plane radials parallel to the beams elements and boom, and this made the beams pattern look like it did with out the ground plane antenna mounted above it. So a 4 element ground plane antenna can be used over a horizontal mounted yagi antenna.

I think it would be a neat thing to experiment with the beam antenna and a 4 element ground plane antenna, with the ground plane antenna mounted 1/2 wavelength about 18 feet above the horizontal mounted yagi beam antenna. This would add a significant ground plane or counter poise 1/2 wave length under the ground plane antenna, probably causing some sort of elevation angle changing to allow the 5/8 wavelength ground plane antenna to work even better.

The ground reflections from a antenna significantly change the elevation angles of any antenna. The higher the better.

The antenna modling program "Eznec" is available from:
http://eznec.com/index.shtml

Here is a web site on the how close yagi beams can be spaced:
http://www.ifwtech.demon.co.uk/g3sek/stacking/stack3.htm#4

Here is a really neat impedance matching program, called winSMITH 2.0:
http://www.noblepub.com

Hello Scott: Yes friends will hose ya off.

This brings to mind my bachelor party, in 1970. One of the distinguished gentlemen after consuming mass quantities, passed out after the chain saw and coffee table contest, (the coffee table didn't make it thru the night)
we moved his lifeless carcass outside so that the eventual throwing up could be done without soiling the carpet and other party goers, now standing up with a list. As a torpedoed ship.

After the eruption of vomit (straight up, then straight down) we hosed off poor old Larry so that the nasty organic material wouldn't stain Larry's shirt. But because the hose was badly frozen with ice made this task more difficult. We then wrapped up Larry in dry blankets and had a detail move the body to a awaiting car.

Hello A.Bierens: I suggest the Sony ICF-2010 and a 20 foot length of small gage wire that can be easily be wound up on your hand. Also the book Passport to Shortwave Frequencies.

I have travelled around the world many times, and always brought my Sony Portable Shortwave Radio ICF-2010. It has a digital frequency readout and doesn't suck the batteries dry. I use the radio all the time I still have the set of batteries installed in the radio a few years ago.

I always was able to hear the Voice of America (VoA) and a bunch of others Shortwave, CB, ham, and other stations.

Message-ID: <gq395tog66p5vbitcj66iulsmkc4kgf98i@4ax.com>
Source record: 66709

Greetings!

Ok, guys, someone is backpedaling here.

Under "purely resistive load" I claim the issue of RC is moot, we will
always see a mis-matched load on the coax impedance used.

Simple enough, so the RC value will always be a constant. We don't
have reactance. Hint: Dummy load on coax, no matter how you trim it,
you'll see the same SWR. Now, if we have reactance - we have a
different story.

Now, Mr. Koaxial Kop, you claim RC doesn't matter in this message...
:+> In article <d1eq4tk53al6gauc1gtbin67l0chv0n6qs@4ax.com>,
:+> >
:+> > In a typical install, the RC value is important. We see SWR issues
:+> > thanks to that value - and pertains to coax lengths and antenna
:+> > reactance.
:+> >
:+> > It should not be discounted in the real world.
:+> >
:+> > What do you think?
:+>
:+> I think you are talking nonsense. Nothing is being discounted.
:+> What is this "RC" value that is so important to a typical install?

As claimed before, any antenna has reactance.

Then you post this...

:+> In article <7tnv4t8kh750s8i37klutai7va56ofdabq@4ax.com>,
:+> codyspc@iserv.net wrote:
:+>
:+> > Greetings!
:+> >
:+> > By your statement, then you choose to ignore any arguments that will
:+> > change your stance.
:+> >
:+> > Any antenna is REACTIVE, it's not a "pure resistive load".
:+>
:+> The impedance given was 25 ohms. That is, 25 + j0 ohms.
:+> If the impedance were reactive, there would be an imaginary
:+> component. You cannot say 25 + j0 ohms is reactive.
:+>

I never did. The RC value becomes a constant - any value used in the
equation will be the equal RC value when the "antenna" is tested. Your

antenna being the 25ohm +/- j0.

We'll always see the 2:1 SWR.

In same message...I continued

:+> > The RC
:+> > value will play a role in antenna installs that cause feedpoint
:+> > impedance problems with antennas that don't have enough bandwidth to
:+> > tune out the reactive changes DUE TO LOCATION OR POOR GROUNDPLANE - I
:+> > can't stress that enough.
:+>
:+> What "RC value"? Give us an example.
:+>
:+> > Since you say it's not important, that is a foolish mistake.
:+>
:+> 0 is not important. It is 25 + j0 ohms. Get it?

Yep, I sure do, we are dealing with a dummy load.

To which I also added...
:+>
:+> > Prove it or shut up.
:+>
:+> Proof: Zero is zero. It is nothing. Therefore, it can be ignored.
:+> Are you going to make me find a reference?
:+>
:+> Prove that 0 is important.

Already have, you can supply all the numbers and plug them into the
equation if you wish to test. When dealing with an antenna supposedly
resonate at 25ohms with no reactance, no matter what can be done,
you'll always arrive to SWR of 2:1.

And then I continued...again...

:+> > James avoided a problem - unfortunately, the problem
:+> > exists in the real world - we aren't dealing with dummy loads.
:+>
:+> > If you can't prove it, I'll drop it here then. You had a chance to
:+> > teach me, but you refuse to allow a SPECIFIC variable that DOES occur
:+> > in real world installs. Both Magnitude and Conjugate work together in
:+> > the RC value - Magnitude to determine SWR, Conjugate to cancel it.
:+>
:+> You are talking nonsense. You're simply throwing out buzzwords.
:+>
:+> What if the antenna impedance is 40 - j30 ohms?
:+> What is the RC value?

Now, we have reactance...

Ok, let's take a look

Since you didn't give a lot of info, like another freq showing it's Rohm and +/-jX value, I can only assume an SWR of about 3 at whatever frequency you chose.

This may be a valid antenna value, but the frequency of interest and it's reactance is inclined to show that we may have an arbitrary value here. You're plugging numbers. The antenna is considerably short.

If you think that we should see an SWR less than the 3 value, the reactance prevents this. So, therefore we'll need some more info from you to help determine "which direction" the antennas' reactive properties go.

Like,

Open end line feed, or using shorted stub?

50ohm coax, or something else?

Measured at feedpoint?

What are you doing over there? ;-)

Regards!

yeah miles. i'd prefer my radio sit still on a bird rms meter and swing as close to 4x's the carrier thats possible on a peak meter. of course text book things dont always come to life but its real close and you will sound loud and a lot closer to VOA clarity then a 10 or 20 to 1 peak carrier ratio like these swing guys love. the only reason i'd do something like that with the big swing is if i'm running tubes and dont wont to run them hot. but that might bring back all the discussions dennis and some other guys had about tuning the amp for peak or tunning it for carrier and i'd hate to start all that back again. i can see no advantage really to using a super low key and high pep on solid state amps like davemades and xforces.

I've been hearing this perennial pest quite often lately. Not on 14.313, but down "slumming" on the lower side of CB Channel 38. Signal is always very strong...probably the result of a high-powered amateur station being used illegally on 11-meters.

What's the deal here? Did the FCC finally pop him for his 20 & 75m antics? If so, someone needs to tell Riley that he has not ceased operations, but simply migrated down to the CB band.

>-Spike

Because, in today's junk society, NOBODY is responsible for their own actions.

Whenever a shooting occurs, the GUN is blamed.

When someone is stupid and spills hot coffee in their lap, the RESTAURANT is
blamed.

When someone chooses to smoke cigarettes for several years, ignoring the
well-publicized fact that it causes DEATH, the TOBACCO COMPANIES are blamed.

When someone gets drunk and rolls their SUV by driving erratically, the
AUTOMOBILE MANUFACTURER is blamed.

I could go on and on. Legislators, in collusion with greedy trial lawyers,
have assured that individual responsibility in this country is a thing of the
past.

If it is so blessed simple, try it yourself. You are about to get a
lesson in the three rules of technicianing:

1) Know when to quit.
2) Know when never to begin.
3) Don't try to outengineer the man who built it armed only with a parts
catalog and two fanzines.

I'm assuming you're interested in Short-wave AM Broadcast listening along with the ability to listen in on Hams and Military/Commercial SSB/CW/RTTY/etc as well....

If so, and you're looking to keep costs minimal, you might want to look at a used SW rig... anything that you buy off the shelf new for less than $200 will perform miserably except on the strongest stations. A few years ago I purchased a Kenwood R-300 (Radio Shack had a similar model.. don't know the model) for under $40... It could run on 12v, 120v, or 'D' batteries... It had a great receiver (sensitive & selective), a decent sized internal speaker (3"x6"), fine tune controls, a calibration scheme, and a BFO (for CW). It did not have a digital readout, but that was unnecessary, as the analog dial was easy to read and calibrate.

With the exception that most of the 'new' SW radios do the FM broadcast band (in stereo) as well, I've yet to come across one for under $300-400 that even comes close to that $40 rig in performance.

==========
Ok ill go along rms =root mean square.. PEP= peak envelope Power .. No my
radio swings forward on rms because of where my deadkey is set. It has
nothing to do with a modified Bird Meter. btw what is a modified bird meter?
Yes I am a guru of sorts

>
> I've seen a loud radio sit still on a bird RMS meter. If you want to
impress

==========
You have seen a loud radio sit still on a bird , ok and your point is? I am not into impressing people but you would have heard a "louder" radio if it keyed lower and swung forward, Now I am not talking about keying up at 1 watt swinging 10 all that will yield is a raspy sounding radio, personaly I run them this way if my radio holds 10 watts on a bird under modulation i will key it up at about 1/2 that, I am also not against a bird holding still but it will sound better if it didnt. >

Tim again you are making assumptions about how much swing people like we are talking about a radio that will swing a rms meter forward not a deadkey reading and swinging up to 40 watts peak or whatever. So you would prefer your transistors to run hot but not tubes? Who is talking about a low deadkey and a high pep we are talking about rms not pep a 4 watt dead key of course rms and having it swing to say 8 -10 watts rms whatever the PEP is It is you cant control that with a variable power knob but you can control how much you key up at and how much you either swing a bird forward or backwards.so you see no advantage, Ok what would be the advantage of keying the solid state amps you mention high ?
lets say a xforce 5 pill holds 400 rms under modulation and will PEP 1000 at 15 volts, this is thier rating ...now if your deadkey is 800 watts your PEP will not change it still is 1000 watts, so we lower our deadkey to 200 watts the PEP value will still be 1000 PEP that will not change and it still will hold 400rms on a bird . so now it is 200rms swinging to 400 rms and the PEP is still 1000 what does this tell you????

simply put i wont run a amp that will hold 400 and pep at 1000. i'd back the carrier down to 250 and let it pep 1000 where it will sound the best and be the cleanest like a 4 or 5 pill should. you should know the reason about the transistors. you can put a fan on the heatsink and one on the transformer side and run them hard all day as long as you dont exceed your drive or voltage by too much however tubes wear out and often times are expensive to replace. i dont have a problem at all with rms 200 deadkey to 400 talking while pep'ing 1000 the whole time because thats just how it should be. nobody ever said the rms meter will actually not move at all. ive never seen one that didnt show some bit of swing unless it was cw or fm. now you explain to me the advantage to runnning a amp with less than a 4:1 peak carrier ration in daily use? other than a little higher dead key thats not even three db's you get a shitty sounding station with too much heat. some of the swing gurus i hear have sideband style signals that dont sound too well and i thought that was what you meant. seems to me your doing it right if you do like the last example.

Lenny,

Once a local statute is passed, a LEO *may* investigate interference complaints, for example, from a church whose PA is being swamped by CB transmissions, or a person whose TV is suffering from interference. I am not sure whether it would be OK to just go around "busting" CBers simply because you see an antenna on a house or car. That would not be sufficient evidence of illegal activity. From your post (Wooo-Hooo!), you sound a little too eager, which is one of the reasons I am not much in support of local enforcement. It's only a hunch, and I don't have facts to support it, but I am afraid this will cause problems for innocent CBers due to mistaken identity. I don't, of course know your own qualifications as to electronics, but *most* LEOs just don't have the expertise to DF and/or operate a spectrum analyzer to nail down an offending signal. I would caution LEOs that to begin "busting" CBers without definite cause could generate lawsuits against cities, counties, and states with the charging officers being named as co-defendants. Also bear in mind that under the Federal law, licensed stations, such as Amateur and commercial, are EXEMPT from such local enforcement. Any questions that arise from the operation of such stations MUST be referred to FCC. LEOS can NOT touch them! Once a license is produced a LEO MUST back off and refer the matter to the Feds. Again, to pursue" enforcement" against a licensed station places an officer outside his jurisdiction and *can* subject him to legal action. I could see some "rambo" cops interpreting the operator attempting to show his license as "contempt" of cop and causing the licensed operator to have to appear in court to prove his operating authority and the invalidity of the action. Again, can you say LAWSUIT? I know I would slap a suit against the cop/local authorities so fast, it'd make their heads swim!

Yea..instead of that combiner being held down i think they should just let it bounce around..smack the sides of the cabinet, maybe roll across the pills. I think you are just getting upset because you have an x-force user not giving you any talk time with your 1-pill. It is very obvious that you do not know the theory behind x-force and dave amps and why they work so well. So sit back and give a listen, cause you won't be talking.

Hello City Slicker: Ok you may a valid point here. I still can't view the jpg photo, it just isn't wanting to come up on my screen. Maybe you can e-mail it to me?

I have seen some pretty bad construction techequnics in many RF Amps and such, in everything from CB, Amateur, Commercial, and even Military systems.

But my point here is that if Brian wants to bitch about it, why not send the bitch to the manufacture, not the ng? Making a one pill amp doesn't make you a Quality Assurance Engineer, or a expert on the subject.

Background:
Anytime you have a technical complaint or a better way of doing things, people who have designed and tested the whatever piece of equipment will usually listen to someone who can point out the flaw, and have a answer to the problem, that will fix the problem. Simply pointed out a construction flaw won't get much attention, in most cases, if a certain amount of success is experienced by the product.

Suggestion:
If Brian wants to show that the construction techniques are wrong than show us a before and after jpg photo, of the improved construction, on a 4 or 8 pill amp. A jpg of the Amps output Spectrum Energy from a Spectrum Analyser would be a great indicator that the modified construction techniques really work. As compared to the before and modified construction configuration. This won't be cheap to do, and will take a little time to knock out.

I have modified quit a few pieces of equipment in my time, and I have seen where obvious things appear to need something bigger and better. Only to measure the equipment's performance after a modification with no change.
Brian says that "some components have too long leads, hanging in mid air, and silicone rubber gooped to hold components" Well show us what you can do, and how this effects the performance!

Jay in the Mojave

Time to go back and read the bill again; I am not too certain that misuse
of Channel 9 or jamming 19 (hell, the Ohio Hiway Patrol wanted to do that)
is part of the grant. Off frequency and hi-power is within it. Remember,
the whole shebang was a product of some local mayors tired of telling Mrs.
O'Leary that they could not help her getting to their very senior
congresspeople.

In those towns where the mayor is gung-ho, the city attorney is going to be burning the midnite oil and you can believe he has lawsuit on the brain. Some of them will get it right and clean up the local headcase population pretty quickly; in most cases, they are already known unto the authorities so this will be a no-brainer. The problem is what happens then and this is where we agree.

Two years later, when all the training has been forgotten, and some ham with a big loading coil is piddling thru town on his way to the pool hall is when the fun begins. You will then need to use the ham's secret weapon: call-sign plates with zero calls. It is incredible how many times you will see the gumballs from an indiscretion and have him go by: you know full well he went to run your plates, couldn't figure them out, and just gave up :-)

Gentlemen,

Allow me to go on record as stating that I am certainly NOT posing as
the other two individuals you refer to.

One of them (this "Captain" person) was brought into this newsgroup as a
paid assassin, a professional internet troll, a flame-artist for hire.
Please note that he specifically attacks only me, no one else (because
those are his orders). This unstable individual was obviously recruited
from the ranks of known troublemakers plagueing the internet newsgroups
and pointed towards me.

Regarding your assertions that this newsgroup should return to
discussing illegal amps, I contend that the "CB = Amps" mindset is what
has brought the majority of strife and discontent into this newsgroup.
By your posts, Twistedhead and Nebo, I can tell which side of the fence
you are on, and I am saddened that you have chosen to oppose the legal
CBers of the group.

Sincerely,
Aaron H. Voobner

70 kw AC is a possibility. There was a picture at my favorite Tech place of a Buick with two railroad generators.
No one stands within 10 feet of these beasts and they are not typically used on a daily basis. If they were no one would be using the channel for miles. 1-5 kw is more common for drive around service. 250 to 500 is even more typical. Fred, are you peering over into the darkside? :^)
I am curious how well the main bearings of some of these multi alt vehicles hold up. That is a lot of extra load that wasn't calculated in the original design.

Jay when you do see the photo I think you will see Brian's point. I don't think I would feel comfortable with the construction of this box. Not in a mobile environment. That Glue gun material dries out eventually. I thought that stuff was for craft projects like flower arrangements.

Ok, Voob, someone apparently thought your post worthy enough of me to read 'cause they forwarded it to me...get this.. it happens again, you're ALSO in the kill file...you know who you are. You give yourself to much credit Voob. No where did I say we should return to any certain subject. The point is, no matter what the content, we should be able to discuss it. But you, along with your imaginary friend (yea, yea, I heard your denial, but you are one lying SOB) have committed more trollish behavior concerning any subject you deem questionable, by YOUR STANDARDS ONLY. That makes you worse than a troll. It makes you a fascist as well. Couple that with your absurd inadequate defenses with all who may disagree with your point of view,, consistently crying, "the law", proves you have no grasp whatsoever for the finer merits of discussion and communication, which makes one wonder if you are into radio at all, and it makes you fodder for the kill file. The only "strife and discontent" arrived along with you and your imaginary playmates. And I don't oppose ANY cbers, legal or otherwise, just one track minded ignoramuses and liars. You have superbly and demonstrably exhibited both traits in your past posts. No one gives a flying leap who flames you, and I could care less how friggin' "sad" you are because of my actions, which you have no clue other than what I allow, and certainly will never explain to the likes of you, due to your limited comprehension and ability to see anothers viewpoint, even if you can't agree on subject matter.

Hello One37: Ok good deal, these programs really help.

Eznec is a great antenna modling program that will allow you to insert the dimensions of the MaCo Beam Antennas, the Beam Antennas in the ARRL Antenna Book, and the Hy-Gain 5 element 10 meter beam, which is pretty bullet proof, and easily modified to the CB Band. And you can see what if any a vertical with or without ground plane radials will do the beams pattern.

Hy-Gains use of the 1 to 1 Balun, insulated driven elements, and Beta Match are the way to go. I have a few old Gamma Match Rods here I use to push aluminum tubing and wood thru the table saw blade area, where you don't want your fingers to go. Some of the Gamma Match Rods have holes burned thru in them, where some CB'er didn't observe the 5 watt input limit. Heaven forbid.

Sir, since you initiated the request and As the recipient of the request, it is my perogative to dictate terms I would need a phone number and your passport # and proof positive id before I can answer any of your questions. I am also going to need your telephone number, my fingers hurt when i type alot. . I am sure you can understand my reasons for requesting this info.Then we also must discuss how much you are going to pay me for this info and when can I expect payment? , I get $1000 for public speaking engagements, and question and answers are going to be cost a bit more. So I will wait to hear from you with this all important information. Hope to hear from you soon!
.

This is from November, I think. The 3 BIG fagboys on here<well, NeboDweebo is close>
got married and wrote a book. Here is the story.

Special announcement about the 3 special kids!
Folks, you need the following book...Twistie, tnom and Scottiekins have, with adult supervision, drooled into a dictaphone the following masterpiece of authorship and it is now available at your local book store...Don't miss "Muskrat Love", the heartwarming story of 3 illegal CB'ers who find love and marriage through uniting in hatred for N8WWM, the mean 'ole hammie they wish they were 1% equal to in quality of flame issues.
While their Sparkomatic and 2 pill amp combo splashes all 40 channels and into 10 meters, listen to the 3 sweet little CB'ers plot, plan and generally scheme to out flame the greatest flamer of all time. Read about their use of electronic components as aids to their sagging libido's. Learn why no female relatives ever come to visit. Look at the special 13 page photo insert that shows the dried snot on their microphone! This and much, much more.

Folks, this book is on par with the smash hit "I am faithful to my wife", by Bill Clinton, and will become recognized as a major literary accomplishment. The trippin' trio have outdone themselves this time, and you have just gotta read it to believe it. Only 29.95 now at your local bookseller.

The MIGHTY N8wwm...Hated & feared by ILLEGAL CB twerps...And LOVING it! Special "howdies" to Scottiekins, Twistiekins, 1mangayboy, NeboDweebo, cd<BKA complete dork>, SwangHISThangman, Phoneyboy the butt pumper, and PunishMYbootie413! You Cat box lickers!

Criminal Mind ? Dude get a grip ! I live in a very rural area, have horses and farm a small piece of my land. I've ran my Collins S series with its matched 30 L1/phone patch and power supply for years out here.(all tubes..rec,trans,amp..on 11 meters). Friggin thing takes up a bench and then some. Nothing but compliments on my audio and conduct. Qsl's from the world and back. I can only hope when you get your ticket you will enjoy it at least half as much. I am new to this group, but not new to your type trollboy, you live for this ng . A sad state of affairs when the HAM attitude in all is self righteousness has to spoil a very fun hobby. I smoke weed too, I know it's illegal but the stuff grows like dandelions on the "back forty " <g>. You go ahead and let the government take even more control of your life, it will distract them from me.
If you still have the sense you were born with, you will find another cause . Lord knows there are plenty of them that are worth even less time than you spend flaming CB'ers :)

yep i have seen one. bo weaver has one that eq made for him . damnist
thing i ever saw. said he could tie 8 12 pill boxes together and make a
96. aint that a kick in the pants?, of course that was when he ran
that 8 alt chevy but he sold that. hmmm, i would assume that would put
you in dc sky class, going up against any two alt a/c boxes there
pump??? no, you got it all wrong pump. the deal is this.....what i
would like right now is for all you fat out of shape cb radio sweat
hogs to keep the noise down while i take my robe off , so these ladies
out here can see what a reallllllllllll man looks like, hit my

music,.......cd is out.........

On Mon, 01 Jan 2001 09:27:15 -0500, Handy Andy <CodysPC@Iserve.Net> wrote:

*Greetings!
*
*By your statement, then you choose to ignore any arguments that will
*change your stance.
*
*Any antenna is REACTIVE, it's not a "pure resistive load". The RC
*value will play a role in antenna installs that cause feedpoint
*impedance problems with antennas that don't have enough bandwidth to
*tune out the reactive changes DUE TO LOCATION OR POOR GROUNDPLANE - I
*can't stress that enough.
*
*Since you say it's not important, that is a foolish mistake. Prove it
*or shut up. James avoided a problem - unfortunately, the problem
*exists in the real world - we aren't dealing with dummy loads.
****

What problem did I avoid??

****
*If you can't prove it, I'll drop it here then. You had a chance to
*teach me, but you refuse to allow a SPECIFIC variable that DOES occur
*in real world installs. Both Magnitude and Conjugate work together in
*the RC value - Magnitude to determine SWR, Conjugate to cancel it.
****

If by RC you mean the reflection coefficient, the antenna impedance and the transmission line's characteristic impedence solely determines that. There is no conjugate matching an antenna to the transmission line.

1) First must admit that antenna is not matched to the transmission line by conjugate match. There is no way to match a transmitter to a transmission line by conjugate match either.
2) Second you must understand that the transmission line is not part of the antenna.
3) Third, I think you may need to understand the Conjugate Match Theorem.
4) Fourth, adjusting cox length is not matching the antenna to the coax. The mismatch is always there if and when it exist.
5) Fifth, only way to match the coax to the antenna is to introduce a matching circuit at the feedpoint to raise the feed impedance up to that of the coax. Also in the matching circuit is a reactive component that is threre toune out the reactive part of the antenna. Thus the antenna will appear to be the same as the coax and it will be purely resistive. The problem is that this is valid only over a very small frequency spectrum. Generally less than 1 Khz.

Until you can accept these concepts there is little that anyone can say to you that will make a difference to your opiniion. I have said this before, you have gained knowledge by trial and error. While this is not a negative, it does mean that your knowledge is still incomplete. You throw up the "real world" and dismiss the theory behind the electronics. SWR is a condition determine solely by the antenna. Your claims of location and groundplane do not in any way deminish the theory. Instead it just takes general case and refines it to a specific instance. When this happens more variables are added to the equation. One then has to consider the antenna's design and location. Each antenna installation on a vehicle is in itself a unique situation. I have stated that the location can affect the antenna's impedence. That variation in antenna impedence will alter the SWR. By adjsuting coax length you will find a length that the SWR meter will read 1:1. At that point you have not obtained a conjugate match. Adjusting the coax length in no way alters the feed point impedence. Thus the SWR on the line is not altered. This so-called match condition does not match the antenna to the transmitter.

regards
james

*x^2)^1/2
*ergo there are any number of combinations of R and X that will equal 25
*ohms. I have no clue where you get the idea that impedance is at J0, but
*your just flat wrong.
****

The equation listed is only the magnitude of the impedence and not the whole impedence. You have left off the angle. A purely real impedance is a subset of complex impedance.

From: jdaggett@gate.net
Message-ID: <3a5917ab.5685728@news.gate.net>
Source record: 66805

On Thu, 04 Jan 2001 10:38:58 -0500, Handy Andy <CodysPC@Iserve.Net> wrote:

*Greetings!
*
*Ok, guys, someone is backpedaling here.
*
*Under "purely resistive load" I claim the issue of RC is moot, we will
*always see a mis-matched load on the coax impedance used.
****

No. the reflection coefficient is a there whether the load is purely resistive
or complex. It is from the reflection coefficient that SWR is derived. Just
because the load is purely reistive does not mean there is another set of rules.

****
*Simple enough, so the RC value will always be a constant. We don't
*have reactance. Hint: Dummy load on coax, no matter how you trim it,
*you'll see the same SWR. Now, if we have reactance - we have a
*different story.
****

The case of a 50 Ohm dummy load, the load's impedance is 50 +j0. Now when the
load's impedance is 50 +j0 and the transmission lines impedance is 50 +j0 Ohms
the load is considered matched to the transmission line. Therefore the
reflection coefficient is zero. This then means that there is no reflected power
from load. Therefore the SWR is 1:1! The reflection coefficient does not change
with coax length. It changes only with coax impedance and/or load impedance.

If we have reactive component of the load yes the impdance is changed, the
reflection coefficient changes and thus the SWR changes. This happens because we
altered the load's impedance by adding a reactive component to it's impedance.

Finally the reflection coefficient is a constant as long as the coax and the
antenna impedance reamin constant.

james

****
*Now, Mr. Koaxial Kop, you claim RC doesn't matter in this message...
*:+> In article <d1eq4tk53al6gauc1gtbin67l0chv0n6qs@4ax.com>,
*:+> >
*:+> > In a typical install, the RC value is important. We see SWR issues
*:+> > thanks to that value - and pertains to coax lengths and antenna
*:+> > reactance.
*:+> >
*:+> > It should not be discounted in the real world.
*:+> >

*:+> > What do you think?
*:+>
*:+> I think you are talking nonsense. Nothing is being discounted.
*:+> What is this "RC" value that is so important to a typical install?
*
*As claimed before, any antenna has reactance.
*
*Then you post this...
*
*:+> In article <7tnv4t8kh750s8i37klutai7va56ofdabq@4ax.com>,
*:+> codyspc@iserv.net wrote:
*:+>
*:+> > Greetings!
*:+> >
*:+> > By your statement, then you choose to ignore any arguments that will
*:+> > change your stance.
*:+> >
*:+> > Any antenna is REACTIVE, it's not a "pure resistive load".
*:+>
*:+> The impedance given was 25 ohms. That is, 25 + j0 ohms.
*:+> If the impedance were reactive, there would be an imaginary
*:+> component. You cannot say 25 + j0 ohms is reactive.
*:+>
*
*
*I never did. The RC value becomes a constant - any value used in the
*equation will be the equal RC value when the "antenna" is tested. Your
*antenna being the 25ohm +/- j0.
*
*We'll always see the 2:1 SWR.
*
*In same message...I continued
*
*:+> > The RC
*:+> > value will play a role in antenna installs that cause feedpoint
*:+> > impedance problems with antennas that don't have enough bandwidth to
*:+> > tune out the reactive changes DUE TO LOCATION OR POOR GROUNDPLANE - I
*:+> > can't stress that enough.
*:+>
*:+> What "RC value"? Give us an example.
*:+>
*:+> > Since you say it's not important, that is a foolish mistake.
*:+>
*:+> 0 is not important. It is 25 + j0 ohms. Get it?
*
*Yep, I sure do, we are dealing with a dummy load.
*
*
*To which I also added...
*:+>

*:+> > Prove it or shut up.
*:+>
*:+> Proof: Zero is zero. It is nothing. Therefore, it can be ignored.
*:+> Are you going to make me find a reference?
*:+>
*:+> Prove that 0 is important.
*
*Already have, you can supply all the numbers and plug them into the
*equation if you wish to test. When dealing with an antenna supposedly
*resonate at 25ohms with no reactance, no matter what can be done,
*you'll always arrive to SWR of 2:1.
*
*And then I continued...again...
*
*:+> > James avoided a problem - unfortunately, the problem
*:+> > exists in the real world - we aren't dealing with dummy loads.
*:+>
*:+> > If you can't prove it, I'll drop it here then. You had a chance to
*:+> > teach me, but you refuse to allow a SPECIFIC variable that DOES occur
*:+> > in real world installs. Both Magnitude and Conjugate work together in
*:+> > the RC value - Magnitude to determine SWR, Conjugate to cancel it.
*:+>
*:+> You are talking nonsense. You're simply throwing out buzzwords.
*:+>
*:+> What if the antenna impedance is 40 - j30 ohms?
*:+> What is the RC value?
*
*Now, we have reactance...
*
*Ok, let's take a look
*
*Since you didn't give a lot of info, like another freq showing it's
*Rohm and +/-jX value, I can only assume an SWR of about 3 at whatever
*frequency you chose.
*
*This may be a valid antenna value, but the frequency of interest and
*it's reactance is inclined to show that we may have an arbitrary value
*here. You're plugging numbers. The antenna is considerably short.
*
*If you think that we should see an SWR less than the 3 value, the
*reactance prevents this. So, therefore we'll need some more info from
*you to help determine "which direction" the antennas' reactive
*properties go.
*
*Like,
*
*Open end line feed, or using shorted stub?
*
*50ohm coax, or something else?
*

*Measured at feedpoint?
*
*What are you doing over there? ;-)
*
*
*Regards!

Sec. 80.505 Points of communication.
(a) Private coast stations and marine utility stations are
authorized to communicate:
(1) With any mobile station in the maritime mobile service for the

exchange of safety communications;
(2) With any land station for the purpose of aiding the exchange
of safety communications;
(3) With ship stations.
(b) Private coast stations of the same licensee may be authorized
to communicate on a secondary basis between themselves if:
(1) The communications are confined exclusively to those for which

authority has been granted the coast station, and concerns ships with
which one or both of the coast stations are authorized to communicate;
and
(2) Other satisfactory point-to-point communication facilities
between the coast stations are unavailable; and
(3) Coast stations which communicate with each other are not more
than 160 km (100 miles) apart; and
(4) Harmful interference is not cause to mobile stations.
(c) A private coast station and associated marine utility stations
serving and located on a shipyard regularly engaged in construction or
repair of commercial transport vessels or Government vessels are
authorize to communicate between stations when they are licensed to
the same entity and communications are limited to serving the needs of
ships on a non-interference basis to other stations in the maritime
mobile service. A separate showing is required.

I think you got an F on your homework. Now, unless you can show that
he doesn't have a license, then you probably should take your own
advice and "shut the fuck up trollboy !"

That's not suprising. Are they for your 17 imaginary friends? I find
it hard to believe that you would have any real friends because of
your attitude and the way you communicate. Or do you actually think
that you are smarter than most by having 17 aliases? Are they just
used for fraudulent purposes, or do you have 17 personalities?

> Tell your Mommy and Daddy about it fuck face.

Jeez, can't you think of something better than that? I've heard better
rhetoric from first-graders.

>like dandelions on the "back forty " <g>.

More irrelavent justifications?

> You go ahead and let the
>government take even more control of your life, it will distract them
>from me.

You are apparently proud of the fact that you own your land and your
horses. The reason you do is because of the government. Without the
government and it's laws you would have been killed for your land a

long time ago. You say that the government is too controlling? As opposed to what? Are laws just rules that bind those that might otherwise infringe on your rights, but also rules from which you are exempt? You can't have it both ways.

>
>.....73's and pump up them amps.....
>

Now if THIS isn't the equivalent of saying "everybody get illegal, now! now! now!" - I don't know what is.

Some argue with me and say that rec.radio.cb is just innocent CBers discussing mostly inocuous aspects of their hobby. But I have hardly seen ANY postings dealing with ANYTHING - except AMPS. Why is that?

Oh yes, antennas are ocassionally discussed, as in "how many hundreds of watts will this antenna handle?", and coax is certainly discussed, as in "what's the best coax to handle big power?", etc.

It pretty much all comes down to amps. Amps are ALL you guys care about.

Which are illegal for CB.

Oh, I know what you're thinking, "Oh Aaron, lighten up". But darn it all, you (i.e. Punisha, etc.) have turned this newsgroup into a trash bin and alienated a whole bunch of legal CBers and intimidated people to the point where they don't even recognize how severely BENT a concept it is that illegal CBers are demanding their RIGHTS to be illegal.

The rights of illegals. Oh my Sweet Lordy Jesus, what an idea. OK, class, Illegal CBers do NOT have the "right" to organize a newsgroup so that it excludes legal CBers. Illegal CBers absolutely do NOT have the "right" to openly transact business and distribute contraband goods and break federal laws.

Sure, make fun of my name, swear at me, attack my family, hire an outside agitator to keep me occupied with threats, vandalize my web page counter, accuse me of treachery and deceit, creating multiple personalities, doing everything under the sun, but I will tell you this; each of these things only increase my resolve.

There is an old Brescian saying, "the cows in the barn do not hear the milkmaid approaching". I think that Petulia Voobner's question was a very appropriate one, in that she asked me "Daddy, why is that man on the radio being so awful?". If anyone can provide an answer for her query, or explain the widespread antisocial posture that pervades CB and this NG, please let me know.

Sincerely,
Aaron H. Voobner

If you read the regs you have posted you will see they apply to maritime industry. So before you spew anymore crap on how it's legal to transmit on land with a marine radio, ask Aaron if his profession is shipping. If he is a recreational boater he has no authority to operate that Icom marine radio from his home. I'll say it again, stay on topic jackass !
>
From: sparky@cet.com (Sparky)
On Thu, 4 Jan 2001 19:26:31 -0500 (EST), moparholic@webtv.net (Moparholic) wrote:
Ask him why he has them mounted on his bench dipshit. Did you forget your "ship to shore last time I checked it was a two way thing" brain fart reply. Or did you realize it too is illegal ? Stay on topic or shut the fuck up trollboy !
Sec. 80.505 Points of communication.
(a) Private coast stations and marine utility stations are authorized to communicate:
(1) With any mobile station in the maritime mobile service for the exchange of safety communications;
(2) With any land station for the purpose of aiding the exchange of safety communications;
(3) With ship stations.
(b) Private coast stations of the same licensee may be authorized to communicate on a secondary basis between themselves if:
(1) The communications are confined exclusively to those for which authority has been granted the coast station, and concerns ships with which one or both of the coast stations are authorized to communicate; and
(2) Other satisfactory point-to-point communication facilities between the coast stations are unavailable; and
(3) Coast stations which communicate with each other are not more than 160 km (100 miles) apart; and
(4) Harmful interference is not cause to mobile stations.
(c) A private coast station and associated marine utility stations serving and located on a shipyard regularly engaged in construction or repair of commercial transport vessels or Government vessels are authorize to communicate between stations when they are licensed to the same entity and communications are limited to serving the needs of ships on a non-interference basis to other stations in the maritime mobile service. A separate showing is required.
I think you got an F on your homework. Now, unless you can show that he

doesn't have a license, then you probably should take your own advice
and "shut the fuck up trollboy !"

You are correct in one sense Brian, but wrong in another if not more. If you had looked at many other designs including the DaveMades, you would see the same if not even worse. Actually X Force has tried to make many different changes so problems would not surfix at all. So for, so good and still the #1 selling competition amp on the market, not to mention with the wins to back them. Brian, you and I both know that you are much more intellegent than to worrie about some silicon. The New Year is in and I am sure you are working on some sort of rf project, so would this not be a waste of time to be pondering over when the products have proved in the last 3 years to be one of the, if not the very best available.

770. THE BAIT, N8 et Voob

Newsgroup: rec.radio.cb
Date: 2001-01-05 05:12:14 UTC
From: Martin <mdwade@mobiletel.com>
Message-ID: <3A5557AE.5820@mobiletel.com>
Source record: 66821

I am amazed at all the BS going on in this newsgroup!!!! As a Radio Hobbyist,
owner of CBs and Ham Licensee it is amazing at the level to which someone
can aspire! The guilty dog barks the loudest and I suppose its true here
also, the respondants to Doug & Aaron just keep adding fuel after Doug & Aaron
start the fire (Flame throwers on)!!! Nobody has thought that the main
purpose of these trolling posts were to see what would pop up. After all,
here in Louisiana, trolling is a way of life and you don't get anything if
your nets are kept dry!!! I still don't know the purpose of flaming the
group if only to see a hornet's nest flare up! Entertainment must
be at a premium for this bunch, but then the group provides the
entertainment by the antics of a few who ain't figgured out the kill
button yet.

Amps attract attention and that my friends is why the Gentle Readers of this
newsgroup have attracted the likes of the Radio Cops!!! One must learn
when discussing a matter which could result in a legal imbroglio, discretion
is the better part of valor.

Freeband is another subject which is watched with particular interest by
those people intrigued by things of the imbroglio nature of gray area
legal subjects. Again, see discretion above.

The new CB "LAW" is giving those not in compliance the nervous willys and
the Radio Cops a dose of Glee, so that is not unexpected at this time.
No State or locality has started to avail itself to the new law, so all
is a SWAG (Scientific Wild Ass Guess) and who knows what will happen.
We can only guess, the group will need firm input when the legislatures
and town councils start to delve into this new area. Report only the
facts, maam!

By flaming Doug & Aaron, most of the group has marked themselves for the
wrath of the Radio Cop Crowd and Doug & Aaron have marked those they feel
responsible for Non-Conforming CB usage.

I wonder what the purpose of this BS is, but, then is the fire brigade
here

(Doug & Aaron) working for the FCC or just trying to go for some cheap entertainment? Why try to figure it out, what is the purpose of trying to figure out Voobner's web page? Is someone trying to figure out where doug lives? Threats to protect what? A stupid radio. You stand a better chance of getting a letter from the Lottery than the FCC if you head the signs, keep it clean and keep your signal outta Mrs. O'Learys lava lamp. Why chance it with problems over a radio? Whats the gain?

I started in CB and got a ham license to call home (something like ET) since HF is pretty dependable in places the phone doesn't always work and some countries are pretty funny about transceivers like 2950s used by guys calling themselves "Big Bubba", "Rockmaster", and the such. You must submit a Ham License, so sorry, but that is the way how it is in the real world (Yes, Dave and Debby, even in those lands, CB is frowned upon, that is, the average Joe and Jane isn't allowed access to 2-way radio much less a telephone) so being a dreaded hammie can open a door or two.

Are all hammies bad, nope, some are downright friendly and I would ask anyone on board to invite em to the coffee stop and show the friendly side of the CB life, something the Ham Clubs should copy. Some try to act out Radio Cop and miss the boat. (ITS ONLY A HOBBY!) I will try to inform, politely, those which may offend my gentle sense of radio fairplay but always in a helpful way and those who rebuff those efforts, I leave them to their own devices and consequences.

73's to all,
Martin D. Wade, N5PZJ "Landman"

PS: Doug and Aaron, the message is across from what I see, those that operate in their own style outside Part 95 take the responsiblity of the consequences of their actions.

PSS: To those who really like to push amps and freeband, you too are attracting the attention of folks who take offense at that type of stuff. See discretion being mentioned above.

Tim, shouldn't it go to 150% of carrier rms with single-tone applied? I know some of the rms meters are about as slow to respond as the average gas gauge so that may be part of it.

I share your sentiments about 'swing'. It is a receiver fake-out pure and simple and does exactly zero good where the AGC is set by the competition.

How to get rid of these slimy trolls? Simple - IGNORE THEM. Starting immediately is the IVAN campaign. I gnore V oobner A nd N 8wwm .
It's quite simple really. What I want is that everyone who is sick of Voobner and N8wwm to post a reply to this post vowing that they will never reply to anything those 2 idiots put on this NG, no matter how inflammatory or annoying they might be. Especially if they reply to this post!

If we all ignore them they will eventually get sick of posting to no-one and hopefully go away. Remember that once you pledge your support to IVAN you must not, repeat not, reply to them no matter how much they flame you. Don't take the bait !!!

Any Takers?

Tim,

Why would you be interested in the PEP of any device anyway? PEP is nothing but dirty watts... RF is all what it is. RMS is the way to go. It measures true watts to the point where the actual Transistor or Tube is rated to.

I've seen big radios do some hellacious watts on a Peak BIRD, but switch back to RMS, it stays one place. Gotta love them GrantXL's. Right UNIT?

So I can assume that you pledge your allegiance to IVAN :)) It's good
that you already made that decision, but the object of this exercise
is to get everyone else to think and act the way you are. When
Voobner & N8wwm realize that they can't get their little thrills by
annoying other people they will soon grow weary of this NG and go and
annoy someone else.

One thing I forgot to mention in my original post was that I run a
totally legal station - just in case those weidos try to use that as
an angle. Not that I would reply to them if they did !!!

sorry my davemade doesnt have glue or silicon holding down the combiner,
thats your xforce baby
I have scoured the picture and dont see any real difference from a
davemade and xforce other than chassis, where are the big changes at steve?
123 has already come out here and he told the truth You want to continue to
lie. Where are all these wins coming at steve? If BB didnt win at the breaks
and he has proven he wins with any amp he runs then Xforce is just an also
ran. did they win the $2000 at ohio nope how about any other classes? ...
No sorry, that would be noname with davemade a close second, as far as
exportsrus if it helps you make a buck you come out here and brag otherwise
go peddle your bullshit to someone else.

Sir, again you initiated the request of the question and i feel it is my perogative to ask you to comply with my request. If i remember correctly didnt you ask the same of someone else? Otherwise, I am going to have to ask you to direct your questions elsewhere if you are not able to fulfill my request. I have nothing to hide unlike you, but it seems that you do have something to hide, just take care of business like a real man and you can find out whatever you like. So whats it gonna be? Why do you need to ask me anything it seems that you have all the answers already according to your twisted logic anyhow.? Again I sit and wait for you.So if you want somewthing from me I am going to need something from you not real hard to understand right....Now do the right thing.....

Steve,
Happy new year...
I'm just pointing out that if these X-Force are the best out there... then god help us. As far as being #1... any moron can throw together an amp that will put out at a keydown for 30 seconds and then blow up! But remember that most people want an amp to work on a daily basis. The construction techniques I saw in those pictures of the X-Force amps are not conducive to reliability. Those types of construction practices lead to oscillations that can kill an amp in a matter of seconds.

Hmmm....seems that when the shoe is on the other foot, you girls get your panties in a wad. HOW many times did the chickenhead go off on somebody for mentioning an amp, an export, or tech question about conversion, even though it was never stated or implied it was for cb? You gets whats you gives. Personally, I don't feel it is his station, it was too clean down there, and if the chump in the pic was operating it, it would be dirty and greasy. Tell you one thing though, the call sign may be active, but it sure as hell isn't on the air. Now I wonder why that could be.......heheehhehe!

So I can assume that you pledge your allegiance to IVAN :)) It's good that you already made that decision, but the object of this exercise is to get everyone else to think and act the way you are. When Voobner & N8wwm realize that they can't get their little thrills by annoying other people they will soon grow weary of this NG and go and annoy someone else.

One thing I forgot to mention in my original post was that I run a totally legal station - just in case those weidos try to use that as an angle. Not that I would reply to them if they did !!!

Right on 2-5-7, I'll be listening! Gonna try and get back to Tim as well, today..great conditions early this AM, left the house at about 4:00 AM and after blasting the ice (yea, ICE, friggin' 28 degrees in the 'pile this morning) off my windshield, the only thing left to do was heat the cab of the truck, and with the DX running strong, the cab was warm in no time. Didn't even need the heater after about 10 minutes. Sounding loud and proud in the swamps 257, 'till we do it again.....

I have a good new looking used Panasonic RFB-45 unit I am selling for a customer of mine for $150. It is portable and FULL coverage inc. SSB. It is the best lowest cost one you can get. I have been making these radios available since '94, and have been sellins SWR's since 79 or '80.

What you want is these 2 factors: Digital TUNING and NOT made in China. The SWL people know this big time, since China had a JUNK $50 unit a few years ago that gave them a bad name. Don't buy Sangean. If you add another antenna to it's or touch it, it's tuning will make you hear 2 stations at a time! Plus they have a newer unit made in China that says NOTHING as to where it is made @ ! An antenna socket is not needed--you can use what is on it but I think this unit has one.

Any questions, e mail me.
Dave

Hi there guys,
Just wondering if someone could give me a heads up on a beginners short wave radio?
I am new, don't have a lot of money but am interested in short wave radio, I do not need anything to fancy, so just wondering what you might

recommend in a radio either a new on or a few years old, I would preffer

a desk top or base model but portable would be ok as well.Digital display?,I have read on the net but its a little confusing and overwelming.
Yaesu?...Kenwood?.Radio Shack?
Thanks in advance for any help or advice you may have.
Russ

You mean I can hook up my poter to my CB? What happens if I hook up the 12v + and -, will I get 24 volts? I know you will!
Dave!

"Matt Deremo" <mderemo@mpowernet.com> wrote in message news:0aM46.1803$KZ.247204@news.uswest.net...
I agree on the basic handheld; probably a waste of your money if you aren't using it for camping or outdoors use!

A 3 amp supply from the shack will run at least $30. If you have an old Personal Computer laying around, yank the power supply out. Hell you can even leave it the case. All of the various yellow power cords have 12Volts/8Amps; use any of the black for the ground. May save you 30 bucks or so.

Making your own antenna is a great idea, but you can purchase a 9ft steel whip for just about the same amount it would cost to make even a simple dipole, with a lot less hassle.

823. Voobner: Magnificent Dolt

Newsgroup: rec.radio.cb
Date: 2001-01-05 18:21:27 UTC
From: seacapndeadbeard@aol.com
Message-ID: <20010105132127.26222.00000050@ng-cm1.aol.com>
Source record: 66776

<< In article <20010104072111.04000.00001428@ng-cn1.aol.com> the fruity, subtly
textured aroma of Mr. Aaron Voobner wrote:

Now if THIS isn't the equivalent of saying "everybody get illegal, now!
now! now!" - I don't know what is.

That's right you persquodital half-wit. You DON'T
Know what is - and wouldn't if it hopped up and
bit you on your wife's Brescian aureole!

Some argue with me

Some? SOME? You flaming heap of anecdotal
pork! ALL of the newsgroup HATES YOUR DAMN
GUTS! (Forgive me for the outburst, I forgot to
take my Pamprin today and my peg leg is abso
fuckin lootley KILLIN me)

and say that rec.radio.cb is just innocent CBers
discussing mostly inocuous aspects of their hobby. But I have hardly
seen ANY postings dealing with ANYTHING - except AMPS. Why is that?

Ohhhh Voobner, baby, yes, you DO see AMPS in
every closet ("Momma, HELP! The AAAMMPS are
gonna git ME!") don't you? Here let me put you
out of your misery with a swift .357 slug in
the midsection.

Oh yes, antennas are ocassionally discussed, as in "how many hundreds of
watts will this antenna handle?", and coax is certainly discussed, as in
"what's the best coax to handle big power?", etc.

Look, dink-boy. I TOLD you before. The charming
dudes in this newsgroup once helped me put
together an antenna for my piss-weak CB set.
One of them even explained Ohms Law to me.
I was SOOOOO bewitched by their seductive
ways that I became their official CB attack
Dog and pro troll-fer-hire. (Why am I telling
YOU this? BWAHAHAHAHAHAHAH!)

It pretty much all comes down to amps. Amps are ALL you guys care
about.

Which are illegal for CB.

Oh, I know what you're thinking, "Oh Aaron, lighten up".

No, we're thinking, "OH AARON, PLEASE TAKE
THE STRICTNINE! PLEASE! PLEASE! PLEASE!"

But darn it
all, you (i.e. Punisha, etc.) have turned this newsgroup into a trash bin and alienated a whole bunch of legal CBers and intimidated people to the point where they don't even recognize how severely BENT a concept it is that illegal CBers are demanding their RIGHTS to be illegal.

RIGHTS? Oh my holy pancake mother of all
shitstained underwear (sorry folks but I
am running out of material and being a sea
captain you don't get into port very often)
Voobner, YOU have NO FUCKING RIGHT TO
EVEN EXIST IN FREE SPACE! YOU should be
locked away in an Egyptian TOMB with
the rotting corpse of Ramses!

There is an old Brescian saying, "the cows in the barn do not hear the milkmaid approaching".

BZZZZT! TIME OUT. Voobner has just entered
The Twilight Zone. Please avoid sudden
movements and loud noises as it may upset
the equilibrium of THIS MAGNIFICENTLY
DEMENTED CRACKPOT!!!!!!!!!!

I think that Petulia Voobner's question was a very appropriate one, in that she asked me "Daddy, why is that man on the radio being so awful?". If anyone can provide an answer for her query, or explain the widespread antisocial posture that pervades CB and this NG, please let me know.

Not Petulia AGAIN! Please Voobner - KILL
YOURSELF while there's still a chance to
Save humanity!!!!

Sincerely,
Aaron H. Voobner

(Hey, what are ya doin after work. Let's go out
and bowl a few frames. Call me.)

Your erstwhile pal,

Sea Captain Deadbeard, Esq.

It's not me so it must be you.

> Under "purely resistive load" I claim the issue of RC is moot,

The reflection coefficient represents reflected power. You can
have a non-zero reflection coefficient with or without a purely
resistive load. It is not moot.

> we will
> always see a mis-matched load on the coax impedance used.

??? What does that have to do with whether or not it is purely
resistive?

> Simple enough, so the RC value will always be a constant. We don't
> have reactance. Hint: Dummy load on coax, no matter how you trim it,
> you'll see the same SWR. Now, if we have reactance - we have a
> different story.

Not true. If the load impedance stays the same, the reflection
coefficient stays the same. This is true regardless of coax length.

> As claimed before, any antenna has reactance.

The antenna impedance can have zero for the imaginary term.

> :+> The impedance given was 25 ohms. That is, 25 + j0 ohms.
> :+> If the impedance were reactive, there would be an imaginary
> :+> component. You cannot say 25 + j0 ohms is reactive.

You said you had a 25 ohm antenna with an SWR of 2.7:1.

What you said is incorrect. Either you specified the wrong impedance
or you specified the wrong SWR.

> We'll always see the 2:1 SWR.

That's what I said. You had a 2.7:1 SWR. Who is backpedaling? YOU!

> :+> 0 is not important. It is 25 + j0 ohms. Get it?
>
> Yep, I sure do, we are dealing with a dummy load.

We were dealing with your 25 ohm antenna. You specified 25 ohms.

> Already have, you can supply all the numbers and plug them into the
> equation if you wish to test. When dealing with an antenna supposedly
> resonate at 25ohms with no reactance, no matter what can be done,
> you'll always arrive to SWR of 2:1.

That is not what you said Backpedal Boy. See what you said here:
http://x68.deja.com/getdoc.xp?AN=708641232.1&CONTEXT=978720148.1146290326
&hitnum=7

You said:
> BTW - the SWR scale for 25 to 50 ohm mis-match is not 2:1 it's closer
> to 2.7:1 - 33 ohms is closer to 2:1 mis-match:

> :+> What if the antenna impedance is 40 - j30 ohms?

> Rohm and +/-jX value, I can only assume an SWR of about 3 at whatever
> frequency you chose.

[other nonsense clipped]

I gave all the information necessary. You know the coax characteristic
impedance and you know the load impedance. You have everything you
need to compute the reflection coefficient.

831. THANKS RON, for the only sincere reply to my post

Newsgroup: rec.radio.cb
Date: 2001-01-05 18:54:29 UTC
From: JAD <jdavoli@NOSPAMerols.com>
Message-ID: <93558a$i1r$1@bob.news.rcn.net>
Source record: 66782
Cross-posted to: alt.radio.cb.skip,rec.radio.cb

Apparently, the mod was removed from the www.mods.dk website shortly after my original post. I suppose it did not work, anyway.

As for the kind folks who told me to TRY IT MYSELF, did you think I was asking for help if I COULD do it myself? I don't own an HTX-10, but was considering one, and wanted to know if the radio would mod out of band with the information I found. The info MIGHT just be of some use to others in the group as well.

The guy with the (supposed) amateur call should be ashamed at his reply to my post. A better-than-thou know it all if I ever encountered one. If you have nothing constructive to post, then why post at all? Lid.....

> your just flat wrong.

Your equation is incorrect and your conclusion is incorrect. You have
the equation for the magnitude of the impedance in polar coordinates.

This equation is not found in "any text book"; it is only found in
the ARRL Handbook and is a typographical error. You will find only
a few paragraphs away in the same book that this equation is correctly
specified as the magnitude term and they provide the equations for
finding the angle also. Both magnitude AND angle are necessary to
specify an impedance.

Your "any number of combinations" are actually impedances with the
same magnitude but different angles. Thus, they are not the same.

Who said impedance is at j0? The impedance specified was 25 ohms.
That is, 25 + j0 ohms.

The correct equation should be written as:
|Z| = (R^2 + X^2)^1/2

In rectangular coordinates, the impedance is correctly written as:
Z = R + jX

You are hopeless, the information you have provided below is pure bovine excrement. "Only in the ARRL hand book", not hardly. You are wrong and all the nonsense to the contrary changes not a whit. Your basics are flawed and the derivative conclusions based on them are wrong as well.

861. Cb radio, the last post!

Newsgroup: rec.radio.cb
Date: 2001-01-05 21:31:36 UTC
From: toxic_waste@my-deja.com
Message-ID: <935efo$8qi$1@nnrp1.deja.com>
Source record: 66914
Cross-posted to: uk.rec.radio.cb,uk.radio.amateur,rec.radio.cb

In the last few months it has become totally depressing reading the postings (well what postings there are) on the uk.rec.radio.cb ng, one constant stream of Cb'ers complaining&#65533; "There's no one out there" or can't hear anything except Russian taxi drivers!!!

What happened to all the Cb clubs? What happened to all the Cb publications? What happened to all the rigs that were sold in the eighties? Maybe some of the hams that are ex or current Cb'ers may have some ideas. From reading rec.radio.cb, it would appear the Americans might be experiencing the same problems as we in the UK, folk losing interest.

Personally I don&#65533;t think you can blame the price of equipment, in real terms it&#65533;s a lot cheaper than say twenty years ago!

Maybe SSB will be the answer to our prayers, if the Americans can use it why cant we? Maybe some Americans would wish to give us their views on SSB?

BTW, anyone heard anymore about the SSB issue, or is it on the back burner again. Typical of the RA, fiddling while Rome burns.

Geez, if it gets any worse, I may be forced to take up Morse.

Regards
toxic waste

The fact that you couldn't operate the radio, and that you attempted to service the radio yourself had a lot to do with the fact that your radio was not serviced under warranty. As far as your return refund... we issue refund checks once a month. Most people who aren't deadbeats have credit cards, so we don't have a lot of money orders to refund like yours. We issue all the checks through our accounting office, and they are only issued monthly. Yours was issued and returned to us because your address you gave the company was inaccurate. We tried to call but your phone had been disconnected, so in short. You're a loser, apparently with a very unsteady address and phone. As I have run this company for its duration, I have not once ever intentionally screwed a customer out of one dime. We even reimburse shipping, and offer additional warranties no other company does. Guess what! You'll be the first; the check we sent to your new address you gave us was canceled two minute ago. Don't bother trying to cash it. If you want your damn refund try to be a man and call me yourself. Short of that, feel free to run your little hate page for as long as you like. We have thousands of satisfied customers that we provide prompt and professional service to daily. You actually bitched enough to eventually get the CFO on the phone, that's who told you would get it when you got it. The facts are simple; we operate along strict policy to operate a company this large and growing. There was no way she was going to make an exception for you just because you whined the loudest, especially since all your problems were self inflicted. If you needed the money that bad maybe you shouldn't have bought a $400.00 radio you couldn't afford anyway. So cry your eyes out Damon. If you want to plead your case, go ahead. If anyone want to hear the real story, I'm sure Damon would love to talk to you about it. So feel free to send him some mail.

863. FOR SALE: MACO LASER 400 6 element Beam Antenna

Newsgroup: rec.radio.cb
Date: 2001-01-05 22:08:11 UTC
From: big124john@aol.com
Message-ID: <20010105170811.09012.00000042@ng-cr1.aol.com>
Source record: 66915

Hello,

I have a "AS NEW" Maco LAZER 400 6 element Beam, I started to assemble it but never completed the project, I have all the parts and the manual for it, could possibly ship it if someone wanted to pay the freight. This Antenna has a 31 ft boom and very soundly built, much heavier material than a Moonraker. Copper Electronics currently sells these for $439.99 plus shipping.

Will consider trades or offers, looking for some FT101E accessories or good ol' Cash will work too, but I am not going to put it up so it is of no use to me, putting up a Mosely 10-40m antenna instead.

If interested send me an email, we can discuss over the phone as well if you prefer.

Thanks!

John in Washington State

The fact that the uhh hmm "ceo" of expresselectronics posted on the NG and in the fashion and idiocy he has just proves to me this is not some one to deal with they are arrogant when you talk to them thier web page lends you to believe half of what they say. Now we all can believe they are this big huge conglomerate "ala" Wizard of OZ from the web page and what the "CEO" has said that they are the biggest and the Best. Hell no one else can tune a radio they have all the best techs working for them, all other ampssuck. I hope the idiots keep buying from them so we can read more storys about them, there amps are way over priced i know i forgot that lifetime warranty you know the one where a year or 2 they are out of business because of the fcc no where to be found or the there are always bad deal no matter what company and i mean non cb related and customers are allowed to voice there displeasure thats part of being in business you take the good with the bad I mean when you get a bad meal somewhere and voice your displeasure the ceo and the owner dont go out and berate the customer in public no matter what the customer says they are right, the proper thing to do is bite your tounge and move on to the next customer if you read the web page theyare all college people (supposedly) did you not take business classes? I mean you are a conglomerate arent you mr Oz. I think you are nothing more than smoke and mirror a web page and a few phone lines if you are as big as you say why does this one little customer deserve all this attention and in anegative fashion. Why not let him blow his steam and you go sell those crates of radios and amps that you are supposedly selling? No the CEO himself makes an apperance on the CB NG to set this man straight I tell you what I am really impressed I hope everyone else is.....

If you choose to deal with one man operations you are of course welcome to do so. But, you might want to consider a few things beyond your small view of the world (have you checked a search engine lately, EEI, Top Ten in the Top Ten engines, 14 months) Concerning Bill and Steve, do they have business licnse? Are they registered with the SEC as a corporation? Do they by chance even have a Dunn and Bradstreet rating? How about a warranty program, maybe for a year? How about customer service, or maybe tech support? Can you even get anyone on the phone? Once again, don't be jealous of our success, you had your chance just like we did. Concerning "Creative Marketing", I guess the idea of a successful business plan is a foriegn idea to you, but we call it advertising, just like every real company on this planet does. You should get out more, maybe even get off the radio and smell the roses once in awhile. We offer a warranty and customer service unheard of in this industry, and we have thousands of satisfied customers, your tiny words won't change that of course, but your welcome to your tiny opinions. The bottom line is that EEI is still the best in the business, and neither Steve, Bill, or Panther or Copper will tell you that we are bad people. We do the best we can, and that just happens to be better than the competition. Maybe they chose to have a life instead of living radio, but this is what we do, and I'll be damned if anyone does it better than EEI.

Uh professor....I have had an x-force box for quite some time. I have had a davemade even longer. I have had both boxes on an 18 volt system and have gotten pretty "long winded" with all of them. They seem to be holding up pretty good. The dave i have had for over 4 years beatin the hell out of it. I also had a 16-pill x-force that was also on higher volts. Beat the hell out of that one too. Now a good friend of mine has it and he runs it the same way. Guess what...Still workin just fine.

Source record: 66929

This is from the ARRL members only web page. YEEEHHAHAAAAAA!

FCC levies fine for illegal amplifier sales: The FCC has fined Stephen Fowler, doing business as Exports R US in Pineville, Louisiana, $7000 for marketing an unauthorized external radio frequency power amplifier. The FCC's New Orleans field office issued a Notice of Apparent Liability last September against Fowler d/b/a/ Exports R Us; the FCC says Fowler has not responded. The forfeiture is due within 30 days of the Forfeiture Order, adopted December 28, 2000

YUK YUK YUK YUK...Yep keyclowns...Riley doesn't care about ILLEGAL amps. Not a bit. YEEEHAAAAAAA!

I betcha THEY made the tape!!!!!
EEAYTONG SONGHONGEYETONG, little sissies.

The Hal Turner Radio Show has obtained a copy of a cassette tape of a "Gay Educational Conference" held in Massachusetts. The conference exposed children as young as age 14 to explicit instruction on gay sex, "fisting" lesbian clitoral stimulation, swallowing after sucking on another boy/man and other items.

The Gay Lesbian Straight Education Network (GLSEN), which co-sponsored the conference, obtained a court order barring its distribution or airing by media. The Hal Turner Show will air the tape on Monday, January 8, 2001 from 8 to 9 PM eastern US time (2300-2400 UTC Monday) on WBCQ at 7.415MHz.

==========
what is your dunn & bradstreet rating? what is the exact name of the company
that is listed with the SEC? Why wouldnt Bill or Steve have a business
license?
Is your company public? If so i how do you conduct sales of illegal
equipment, backroom? under the table?secret handshake? You are the one who
came out here now we want some answers.

JAD<

As far as I know, the HTX10 will NOT mod. Period. That is, unless some-
one has come up with something since I heard last. The reason is, Radio
Shack got "burned" on the HTX100 because it was easily modded. So the
HTX-10 was designed so that it wouldn't go out of the 10 meter band.
I have heard of some people trying "wizardry" of varying sorts on them,
and the thing just went bonkers. That's all I know personally. No
flames meant on my part.

Best 73

Jerry

From the ARRL "In Brief" page, January 3, 2001:

FCC levies fine for illegal amplifier sales: The FCC has fined Stephen Fowler, doing business as Exports R US in Pineville, Louisiana, $7000 for marketing an unauthorized external radio frequency power amplifier. The FCC's New Orleans field office issued a Notice of Apparent Liability last September against Fowler d/b/a/ Exports R Us; the FCC says Fowler has not responded. The forfeiture is due within 30 days of the Forfeiture Order, adopted December 28, 2000.

At the last family reunion cum brawl I got a pretty good dissertation on Billy from a nephew in law or somesuch relation. He may preach a good line but no ham bill has gotten thru his committee in years. This friend of cellular is almost single-handedly responsible for the US having a major shortage of spectrum space for cellular. His main aim in life is to give the National Association of Broadcasters good value for their campaign contributions.

Sounds as if you have been listening to the campaign speeches. :-)

> Dick Nï¿½BK

LOL! Yup! I've already had my plate run just because of the big screw-
driver antenna on my mobile. I got run away from McDonalds by a local
LEO one night. I stopped in on way home from movies one nite for a
Coke and a burger. I had just bought my IC706 MKIIG and was having fun
with it--just band-hopping. I musta overstayed my welcome, lost track
of the time, etc. for it wasn't too long before a city cop drove in,
pulled up and asked me what I was doing. I showed him my half-eaten
sandwich, and told him I was just eatin' and talking on my radio. I
volunteered to leave. Yeah, I can see how hams and innocent CBers
could be hassled by misinformed LEOs.

Source record: 66961

I agree. They edit their "forum" to make themselves look good.
They freely change the things others post there to suit themselves.
They deny access to people that disagree with them or make them
look bad, then go on to post lies about those people that cannot
be countered because they've denied access to them.

People in the know laugh at them. If they were as almighty as
they claim to be, why are their prices mediocre? Why don't they
buy in such quantity as to just blow everyone else out of
the water? How can anyone else be in business with such an
unbeatable juggernaut as their competition?

The truth is, they are nothing more than another more-or-less
wholesale-to-the-public cut-throat outlet for equipment. And
they're not the best at what they do. Better prices can be found,
and better, more honest service can be found. In other words,
they're mediocre at both ends of the scale. They trap customers
with their flashy website and manipulated forum. Customers such
as those shouldn't be surprised if they get ripped off.

Fellas, remember last week when I told you that some busts were coming down? I was not kidding at all. I am sure you read the post about the NAL and fine levied on Exports r Us with great interest. I assure you I know what I am talking about. There are more busts coming and they are coming soon. Keep a watch out for the news. It is going to happen and enforcement in general will be increased significantly in 2001. There will be news releases by the FCC on an ongoing basis and they are also planning to involve the media on large scale busts. You may well end up on some national news show, depending on how egregiously offensive your operating practices are. The FCC believes that increased public awareness and more publicity will inspire local law enforcement agencies to enact ordinances to deal with the problem. it is a widely held belief among illegal radio operators that the FCC is too busy to deal with them. That is not the case at all. There is, at this time, a well orchestrated strategy being implemented to make it extremely difficult to obtain amplifiers that can operate between 25 and 34 megahertz. Along with this strategy comes an increase in NAL amounts and stepped up enforcement. This has already started and will continue into the forseeable future.

It is a financially dangerous time to operate illegally. Gentelmen, you would be well advised to heed this message. If you do there is a good chance that you will avoid the problems those who do not will experience.

Clinton very recently signed a bill that turns enforcment of FCC rules
regarding CB over to local law officials.
Does anyone have any more info on this subject? Especially web links,
news, and the actual wording of the bill itself?

Any factual info greatly appreciated.

Wow! This is an unexpectedly emotional burst from a CEO. My impression of your operation has dropped a bit here. In my few dealings with David (sales) and Cliff (tech) at your place, I've been treated very favorably. Based on those coversations I have had a good impression of EEI.

However, this kind of public blasting of a customer (ableit a LOUD customer) with a complaint was not very well thought out. You might have benefitted from this by seeing the loud complainer as an opportunity to show how well you treat everybody who walks in your door.

Of course I haven't had to deal with the actual verbal and email assault that he sounds like he's landed on you. And I'm perfectly aware that Damon's web page is probably a little toned down on his end to make him sound more reasonable than he may have been on the phone. But even so, you're the CEO. You need to be able to constructively handle adverse situations. Sounds like you were on the right track to me by immediately agreeing to reimburse the guy. Then you came out with this note.

Just as an example of the way you might have changed the tone, here's how I think I would have tried to handle it.

On Fri, 5 Jan 2001 15:35:24 -0600, "CEO" <exports@exportradios.com> wrote:

>The fact that you couldn't operate the radio, and that you attempted to
>service the radio yourself had a lot to do with the fact that your radio was
>not serviced under warranty.

You might have said: We also found the radio inoperatable when you sent it back. Would you like us to send you another one? We'll make sure to check this one out for you before it goes out the door.

>As far as your return refund... we issue refund
>checks once a month. Most people who aren't deadbeats have credit cards, so
>we don't have a lot of money orders to refund like yours. We issue all the
>checks through our accounting office, and they are only issued monthly.
>Yours was issued and returned to us because your address you gave the
>company was inaccurate. We tried to call but your phone had been
>disconnected, so in short. You're a loser, apparently with a very unsteady
>address and phone.

You started off good here then lost it in the second sentence. Starting there, you could have explained: Had you purchased your radio with a credit card, we could have immediately credited your account.

We did send you a check as well as call you, but we must have gotten your address and phone number down wrong. Probably a miscommunication on our part. Please send us your correct contact information again so we can get the check out to you as soon as possible.

>As I have run this company for its duration, I have not
>once ever intentionally screwed a customer out of one dime. We even
>reimburse shipping, and offer additional warranties no other company does.

Simply say your good points here and avoid the negative word 'screwed'. You are absolutely right to be proud of your warranty and reimbusement policies. I think I'd try not to mention the 'no other company' since you really have no way of knowing what all the 'other companies' do in all cases. You can only really talk with certainty about about what your company does.

>Guess what! You'll be the first; the check we sent to your new address you
>gave us was canceled two minute ago. Don't bother trying to cash it. If you
>want your damn refund try to be a man and call me yourself.

Here you are blatently saying that you intend to try to screw this guy - in writing - in public. Not good. You should have told him when he should receive his refund and to call you if he doesn't see it this week (or something along those lines). You certainly should refrain from the colorful language of 'damn' and 'be a man'. Tone down the testosterone level - this is business, not the WWF. Also it seems to me that you should have provided some contact information if you are publicly asking someone to call you. Traditionally a name and phone number are good. Here, you might have asked him to reply to you via email instead.

I should also mentioned that along with your other losses you are suffering on this customer, you may also have encountered an extra fee for cancelling the check. How is this good for your shareholders?

>Short of that,
>feel free to run your little hate page for as long as you like. We have
>thousands of satisfied customers that we provide prompt and professional
>service to daily. You actually bitched enough to eventually get the CFO on
>the phone, that's who told you would get it when you got it. The facts are
>simple; we operate along strict policy to operate a company this large and
>growing. There was no way she was going to make an exception for you just
>because you whined the loudest, especially since all your problems were self
>inflicted. If you needed the money that bad maybe you shouldn't have bought
>a $400.00 radio you couldn't afford anyway.

Obviously you wanted to get the message to Damon that the woman he talked with on the phone wasn't some bimbo with no authority. You want to let him know that you directed him to the highest level to get his questions answered which I think was the appropriate action to take.

In my opinion, I would bend the rules for this customer. I'd want him happy and quiet as quickly as possible. I would have cut the check to him that day and sent it to him via some trackable mail system. I think he'd understand that he had to wait until the end of the month if that's the way you wanted to do it.

Your CFO knows your billing cycles, she should have been able to guess at least when the check was going to cut and therefore about what week it should be arriving at his place. She might also have double checked the address she was sending it to. My guess would be that she was just bowled over by the customer being loud or abrasive. She probably just wanted to avoid saying anything politically incorrect and get off the phone. I'd bet she was just showing restraint and it came off as a flippant comment to the customer. She'll likely do better at communicating next time. For most of us (me included), it takes time to get good at being calm under fire.

>So cry your eyes out Damon. If
>you want to plead your case, go ahead. If anyone want to hear the real
>story, I'm sure Damon would love to talk to you about it. So feel free to
>send him some mail.
>
>Damon Breeden
>401 East Harter Ct. (Trailer Park)
>Visalia, CA 93277

This part is of course totally unnecessary. Further, you've posted his real name and address, yet failed to include yours. And remember - you asked him to contact you.

In short, don't shoot from the hip (or heart in this case) when you are posting something in a public place when you're the CEO of a company. I'm sure you've got a lot of your own time, money and energy sunk into the business. And for the most part it seems that you are gaining momentum and things are going well. Why battle with this one guy when you know the smart move is to refund his money?

I'm sure in your line of work you have lots of folks who are literally tough customers. You can be pretty sure this won't be your last one. And yes, maybe he did get in there and mess with the radio, but so what? Cut your losses, keep your reputation and get on to the next, more profitable customer.

There you have it - free advice, probably worth what you paid for it.

Thanks for reading. Hope some of that makes sense.

-Toby Mills

Apparently, the mod was removed from the www.mods.dk website shortly after my original post. I suppose it did not work, anyway.

As for the kind folks who told me to TRY IT MYSELF, did you think I was asking for help if I COULD do it myself? I don't own an HTX-10, but was considering one, and wanted to know if the radio would mod out of band with the information I found. The info MIGHT just be of some use to others in the group as well.

The guy with the (supposed) amateur call should be ashamed at his reply to my post. A better-than-thou know it all if I ever encountered one. If you have nothing constructive to post, then why post at all? Lid......

****

Well, if it had some effect in keeping your wallet in your pants, you owe me a thank you. You had been told how and why it would not convert and continued on your search for El Dorado anyway with less than stupendous results. A bit of logic would and should have worked a lot better. If it did not, I will apologize for my judgement and move on.

Nothing supposed about the call; check out QRZ.com or Buckminster and it is there big as life and twice as ugly. Use the info to get my phone number and I might even answer it. I do not live in prisons of my own construction and, being a lazy soul, find masquerading as the Velvet Codpiece too blessed much work. Having been in amateur circles a few years I recognize the symptoms of a ham cleaning out his garage on the local space cadet.

No hard feelings and with any luck we both learned something.

* FCC levies fine for illegal amplifier sales: The FCC has fined Stephen Fowler, doing business as Exports R US in Pineville, Louisiana, $7000 for marketing an unauthorized external radio frequency power amplifier. The FCC's New Orleans field office issued a Notice of Apparent Liability last September against Fowler d/b/a/ Exports R Us; the FCC says Fowler has not responded. The forfeiture is due within 30 days of the Forfeiture Order, adopted December 28, 2000.

I wonder who they will get next???
Have a nice day

The "rigs" that were sold in the 80's were mostly 27Mhz AM, that's why they are not prevalent in these days of approved 27MHz FM UK operation.

Lenny, everyone........

You don't have to bother checking....and the
FCC won't be providing you with any opinions....

It's not the 27 meter band, either.
It's 11 meters/27 mhz. And if I were you,
I'd be careful if you're considering taking
someones property from them without due process
of law. I believe that's still part of most
state constitutions.

Most radio operators are not responsible for
the bulk of interference complaints caused by
harmonic or front-end overload scenarios. In
1973-74 the EIA removed necessary front-end
filtering from the majority of entertainment/
consumer electronics in an effort to offset
rising costs of plastic used in enclosures for
equipment of this nature. BTW, plastic is a
by-product of petroleum. The gas crunch did
more than just raise prices and generate long
lines at the pumps. Others that I have spoken
with seem to think that there were other goals
in mind as well, like that of generating a
positive cash flow for the FCCs enforcement
division. Seems they were lacking a budget
at the time, expressly for this purpose.

Individuals involved in law enforcement at
the local level had better do some digging and
make an attempt to understand what this is all
about. As you can see, any local governments
planning to take up the mantle of enforcement
will need to be laying out some cash to educate
and train LEOS to handle this effectively, lest
this all just create more litigation and
further bottlenecks in the courts. And don't
forget, when you go into the alledged victims
domicile asking what device was experiencing
the interference, take a look at the back of
it and make sure you read and understand the
following:

THIS DEVICE COMPLIES WITH PART 15 OF THE FCC RULES.
OPERATION IS SUBJECT TO THE FOLLOWING CONDITIONS:
(1) THIS DEVICE MAY NOT CAUSE HARMFUL INTERFERENCE, AND
(2) THIS DEVICE MUST ACCEPT ANY INTERFERENCE RECEIVED,
INCLUDING INTERFERENCE THAT MAY CAUSE UNDESIRED OPERATION.
SEE INSTRUCTIONS IF INTERFERENCE TO RADIO RECEPTION IS SUSPECTED.

Yes, the FCC has covered their collective asses well here.
If you will note the last line:

SEE INSTRUCTIONS.....

The consumer is just as much to blame here as anyone else.
The EIA just did what they did so you wouldn't have to pay
higher prices for your tvs, stereos, toasters, what have you.

This places the responsibility not only on local radio
operators but consumers and manufacturers as well. If you
read the info provided with your purchase the distributor/
manufacturer explicitly states that you should contact the
manufacturer if any problems arise, instead of dialing 911.

And these problems can be had with FCC type-accepted
equipment just as readily as with the non type-accepted
stuff. Type acceptance is no guarantee of interference
free operation.

There are many of us in this industry who are all to
familiar with the long, on-going process that has brought
us to where we are today, and if they try pulling this with
someone knowledgeable of both the history mentioned and
his rights, this will come to a head very quickly. There
are already attorneys boning up on all of this on a nationwide
basis, just waiting for a first trial case.

And in all cases of interference, the FCC has exclusive
jurisdiction. The Federal Appeals Courts will have some
fun with that.....

I hope that I have at least caused some of you to seriously
consider what lies ahead and, at the very least, made you
realize that this is not so cut-and-dried as I'm sure some
of you seem to think it is.

73,
NAO911/Jack

From: Rag Chew 442 <sezfamily@email.com>
Message-ID: <936broio1@nnrp1.deja.com>
Source record: 67001

As a special education teacher for 24 years, I have come to the conclusion that N8wwm is mentally retarded. I have shown some of my colleagues copies of his post on this news group and the concur that he is mentaly retarded. One of my colleagues is the professor of mental health at the New England College of Medicine. I feel that his analysis of N8wwm is correct and that we should keep this in mind in our responses to his postings. It pains me to see someone with disabilties be treated in such a way by others in this news group.

This is from the Exports-R-Us website, describing their illegal "products":

"Each amplifier is shipped in a plain brown box with no documentation, instructions, or owners manual. Exactly as the products are shipped to our company. Our company has no control over the methods of operations for the manufacturers of these fine products."

Can you BELIEVE that? This equipment is so ILLEGAL (and they KNOW it is) that they have to wipe out all traces of who made it.

"These amplifiers represent high end communications for the serious radio operators."

You mean radio operators who are serious about being illegal!

"These are not common consumer electronics products."

You BET they ain't! They...

(a) Violate FCC rules
(b) Are illegal devices
(c) Need to be kept hidden from the law

"These units are not for the average enthusiast or novice. Some of this equipment requires 2 gauge wire, multiple batteries, and high powered alternator(s)."

LOL! Thick wire! 2 batteries! Such advanced state of the art concepts! My head is spinnning.

"Proper attention must be paid to the installation and use of such equipment. We are not responsible for misused equipment, or damage caused by misuse."

How about the FCC fine for illegal use? Might mention THAT, too.

"If you are new to the equipment we suggest you start with the products at the top of our mobile amplifier page and work your way down. The smaller amps are very easy to install and use. And of course our technicians are always available if you have any questions. EEI Tech Center (903)236-4569"

Hello, is the the tech center for illegal CB amplifiers?

"All of our amplifiers are made to cover 10 to 80 Meters, operations on some bands may be illegal in your country. Contact your local regulatory commission for more information."

But they are peaked for 11 meters (wink wink).

"These Amplifiers are for Industrial, Scientific, Medical, Amateur radio, or Export use only. These Amplifiers should not be used to transmit on the citizen band in the United States, or Canada."

But we'll use words like "competition class" and "CB" in our ads cuz we know that YOU know who's buyin' these things.

Criminal. Dishonest. Illegal.

I'm glad they are goin DOWN.

If you think of all of the Ham's!
All they are is the old" Good buddy" "10-4" "CB" people just like
you!!!!!!!!

Now that they are a big shot "HAM" there shit don't "Stink"!!!

Well they think they never had broken the "Law".....

Well if you had ever talked to one you will know that it's all a big
line of BULLSHIT!!!
Now that the "FCC" know's how to find them they want too squeal like a
pig...
that's FUCKED UP.......

All i can say is that all you ham fag's need to get a LIFE..

You all had started at the CB entries level and you can't say you
didn't!

So were do you all get off coming down on the "CB'ers"..............

Have a good day!!

Yeah, Train, illegals got to stick together on this deal. Next thing you know, they'll be bustin up your illegal "cb mods" business. Mind if I make a commment directly to Steve, too?

Steve: ignore the fine. It's like a JAYWALKING ticket. Silly laws. Tear up the letter. Just sit tight. It'll all go away. (Maybe)

Okay, let me rephrase an earlier message I wrote. I need an antenna that I can stick out my window for a while, and then put it back in the apartment. A magnet mount has been suggested, but Im not sure if I have anything to stick it to. Is there a good temporary antenna you can just place on a flat surface instead of mounting it?

How do you get young people interested in anything these days...

A typical young person will probably be a student, likes drinking, goes out
nightclubbing....
Hobbies of any kind are not seen as being 'cool' or 'interesting' ....

An apartment? If you are above the ground floor, then you have a
unique opportunity. Find or wind a 50:75 ohm balun and try a vertical
dipole. Very cheap, very easy, and very efficient.

>> Sparky, FLRC
>
>0.5

Really? I seem to recall that the reflection coefficient is a complex
variable. If you do the algebra (and you didn't) you will find that
for a given SWR the reflection coefficient is undefined.

Just to save you the trouble of reading, and I know you have trouble
reading, here are the equations:

gamma = (Zload - Zline) / (Zload + Zline)

SWR = (1 + |gamma|) / (1 - |gamma|)

So I'll ask you again, what is the reflection coefficient when the SWR
is 3?

And, since you seem to have forgotten, what are your many references
that you claim makes me a liar? Since school has started up again you
should have no problem finding at least one. Don't forget to ask your
librarian about the book you said you would get almost a month ago.

I guess you didn't read my post:

>>Now, unless you can show that he
>doesn't have a license,

Since you were the one that said transmitting from shore is "extremely
ILLEGAL", and saying so without any further qualification, the burden
of proof would be yours to show that 1) he used the radio, 2) he used
it illegally. I guess that is just too much logic for you, isn't it?

Go back to your farm and smoke your horse-droppings.

Wow! You really shot yourself in the foot here, didn't you? I am certainly glad to have had the chance to read how you treat irate customers. Sure, this guy is mad, but whatever the reason, you should not have replied to him in the manner that you did in a public forum. Publicly sticking your tongue out at a customer is never an acceptable reply for a "CEO" of a "corporation" to make. Even though it may have felt good to click the "send" button on your browser at the time, I'm sure that in the long run, you will see repercussions from your childish response. At this time, I would suggest that you attempt to save face, and the way to do that would be to apologize for your actions in the same forum that you made them. Just remember one thing......we can all make choices, you made yours, and future customers are making theirs now. Just my $.02 worth. Have a great day!

Sincerely,
Randy Chapman

Thanks for the thoughts, Fire. I posted that to see how the actual cops on the job and the ones on the street feel about it. That was a while ago now and only one out of the entire LEO forum even gave it an after thought deeming it worthy enough to reply. I did receive an email from a LEO in Miami asking me if cb's are still made, said he thought they went by the wayside with the advent and proliferation of cell phones and hasn't even seen one in twenty years. Sucks, but the occasional token bust will continue to happen every once in a while, always has, always will, nothing new there, no new revelations, business as usual, paying lipservice once or twice a year to one of the little guys. Now its back to business as usual.

Innocent until proven guilty in a court of law by a jury of your peers.
There are people that conduct illegal business every hour of every day,
knowingly. Their do have that right until they are proven to be engaged in
an illegal activity. I have the right to choose to live legally or not, and
if I choose to persue illegal activities, until I am proven guilty of
persuing them, I have the right to continue to do so. When it is proven,

then punishment will be given, and in theory, I will not continue that activity.

And no SPACE CADET here, either. That's why I was doing my homework. There are plenty of these transceivers out there second hand at very attractive prices, and I needed a "double duty" rig for a second vehicle. Say what you want about CB, but I won't travel without one, despite the profanity and filth, they are still quite useful on the road.

No, I was not content with the answers I got here, especially when one of the first sites I examined had a mod to offer. So, I returned to the forum with what I had found, to see if anyone else had tried it. Was the best way to go.....

Yes, I hope we BOTH learned something, and sorry about the digs on your call.....I have NO doubt it's for real....

My sincere thanks to others that responded!

980. FCC Bust!

Newsgroup: rec.radio.cb
Date: 2001-01-06 15:25:36 UTC
From: k8cpa@arrl.net
Message-ID: <3a57380d.8682408@netnews.att.net>
Source record: 67033

This came in from the ARRL Letter:

* FCC levies fine for illegal amplifier sales: The FCC has fined Stephen
Fowler, doing business as Exports R US in Pineville, Louisiana, $7000 for
marketing an unauthorized external radio frequency power amplifier. The
FCC's New Orleans field office issued a Notice of Apparent Liability last
September against Fowler d/b/a/ Exports R Us; the FCC says Fowler has not
responded. The forfeiture is due within 30 days of the Forfeiture Order,
adopted December 28, 2000.

See why I quit?

Again Sparky you are wrong, the reflect coefficient is .5 when a swr of 3 it is not variable , bird electronics even has a slide rule for swr, return loss, match efficiency and reflect coefficient. so when we have (just for example) 200 watts forward power and 50 watts reflected power the swr is 3 and the reflect coefficient is .5, just the same as 2000 forward and 500 reflect, so we still have a 3 to1 and a .5 ref coefficient

He has stopped several anti-ham bills but except HR 2346 which he
put off until the last while it could sail through without
opposition. The City of Houma (Terrebonne Parish) has had a
problem with High Power Stuff (Yeah, its CB) so they ask dear
Ole Billy to look into this. Louisiana's legislature meets this
year for general session (once every two years) and this year the
HR2346 has become a fat (read: Revenue enhancement) item to be
considered. If Dateline was right, now cars and trucks coming into
Louisiana on I-10 & I-20 will have a new inspection item to worry
about.

Meanwhile Qualcomm and the NAB love dear ole Billy and he does get our
roads paved, garbage picked up and kiss the ladies and hug the babies
(or is it the other way around), well anyhow twisted understands this
thread.

******,

This is a typical first of the year ploy by many
large companies and corporations to create a huge
tax write-off to defer negative cash flow usually
followed by re-organization and sometimes a merger
or leveraged buy-out with/by another company.

This is how many savvy businesses are able to avert
total collapse. This allows them to write off large
amounts of debt. Your government has been doing pretty
much the same thing for years by devaluing the dollar
every so often. They'll be back.....Most likely
under another name, so pay attention.

Bankrupt doesn't mean out of business.

Bankruptcy is the great cash cow of corporate america.

I have added the ability to auction off your CB/Ham or communications equipment on my website at ChargersCastle.com. This is a free service and there are no fee's at all like there is with Ebay and some of the others.

To check out the auctions already in progress, go to ChargersCastle.com and then click on "Castle Auctions". There you can view what is there or you can post your own items, and again, this is a FREE service.

Hope to see you there!

Greetings!

Oh, I see, you just want to argue, I thought we cleared things up.

All you want to do is cloud them again.

Speaking of backpedaling, you really should re-read your posts. Since you like to issue false statements at least not without reading other post FOLLOWING that message...ahemn...

I do remember being corrected, and all I see in the reply is 2.7 SWR? Uh, sir, you're making a fool out of yourself - you quoted 2:1 SWR that I now understood, in this same message. Your point being? At least I made an effort. Is it supposed to be 2.7:1 SWR or 2:1 SWR - can you please make up your mind?

If you have a personal problem, we can stop right here...

j0 - at any Rohm factor, becomes a constant, you still get the same SWR - you can't even seem to agree to that. When you state load, the suggestion of the dummy load has all intents and purposes to provide fact to that claim. It stays the same, therefore becomes a constant. Nothing else is being said here, so don't add words, unless you're clarifying. If that is the case, the claim to the hint I made, will stand.

When reactive elements are present at the antenna, their own effects are not necessarily repeated as a constant through the coax. It does have a factor when the load and coax impedance are not equal, and the Rohm value with the jX factor is not 0.

When you can agree to this - then I will continue to listen.

You're stuck on resistance, real world values aren't.

As far as your 40 - j30, are you just plugging in numbers - I gave the answer of SWR 3 - is that correct?

On Fri, 05 Jan 2001 13:49:21 -0500, while the modem was ice fishing with the Mouse, Coax Length Police <anylength@willdo.com> dissertated the following:

:+> james

Thank you.

Could you possibly help out here and see if there is a formula for
conversion?

Preferably one that helps show RC when two different impedances are
used? You showed the one with Zl and Zo, what I'd like to know is the
formula for the reactance of the antenna and how it will affect
impedance. I've got a lot of formulas over here, just trying to find
the one you're talking about.

Regards!

news:t5dvsh87mhpv3e@corp.supernews.co.uk...

| How do you get young people interested in anything these days...
|
| A typical young person will probably be a student, likes drinking, goes
out
| nightclubbing....
| Hobbies of any kind are not seen as being 'cool' or 'interesting' ....

I think you're being a bit hard on the kids here [btw whilst no longer a student, I'm still relatively "young" here..]

not *entirely* true. I like drinking and partying [prefer underground raves to commercial nightclubs] - so do my friends...

but we still have "hobbies" as you call them. Not maybe in the anorak way [well we wear bomber jackets these days anyway ;)] but my friend is a musician with his own project studio, his girlfriend is an artist who does a load of her own sculptures etc - other friends of mine put on their own music events, paint backdrops, we make video projections, websites etc.... its not merely just a life of drugs, alcohol and hedonism...

its not all doom and gloom for radio either, one weekend last year I showed a bunch of my friends how I could decode some RTTY and stuff with my laptop and pick up details of the big storm from a german meteo station [this was a day before all the floods etc] and also get news in swedish etc.. they were fascinated by this, as also by the things you can get on scanners [one friend
was a bit more wary of his pager after I showed him POC32....]

we even sample aircraft selcalls etc off HF and some russian/serbian mil traffic to make tekno records with! [actually there's a lot of this goes on, so if your kids play records which sound like a load of QRM then maybe that's because it *is* :)]

people think the 446 sets are cool, they *are* slightly put off that they don't have dialling facilities ;) but they are starting to become of interest to the youth...

another friend [who wasn't last year that interested in radio etc[just asked me last year about UHF and microwave comms etc and how it all works, he's just gone and bought some books about radio comms principles to learn about it!

and with increasing european unity and collaboration especially amongst the
I'm sure young people would like to have SSB CB to talk to friends in
France, Germany etc during the summer or easier access to HF bands for
this....

I think its an image thing as well, you hams *HAVE* got to get shot of the
image that the hobby is for middle aged or retired OM's with right-wing
political views, [and I know not all of you are like that anyway]. and a
question of education. Most young people don't realise that when they use a
mobile they *are* using a radio set [and a very sophisticated one too] -
those with the knowledge need to educate them!

Alex

Steady on :-)))
When (not if) it is proved that mobile phones are dangerous to your
health, there will be an upsurge in telecommunications that do not
involve microwave frequencies.
These will include PMR, and CB.
There is already a major court case going on in the USA involving the
safety of mobile phones.
It is up to us to tell people that there are alternatives to microwaving
your brain.
Do you remember the safety warnings that went out with 934MHz equipment,
that told of the dangers of being in close proximity to a radiating
antenna ?
Mobile phones operate on this band, as well as 1.8GHz.

Do you honestly think that mobile phone pose no discernible health risk ?
You must all know of action groups that have been set up to fight the menace of mobile phone masts near or in school grounds or housing estates.
The youngsters today have no idea what a CB is, so is it any wonder that user numbers are declining ?
If all goes well, I shall soon be involved with a company that we all know and love, and I intend to make it my business that the public is enlightened.

Cheer up :-)

There are a lot of reasons that CB (and Ham) radio are not as popular as they once were. The primary reason, in my opinion of course, is that there are so many -other- interesting things for young (and not so young) folks to get into. Like computers & the Internet. Heck, all of us on here are into that!

Good suggestion although a 1:1 balun is probably better because you don't get 73 ohms in realspace, only freespace.

Similarly, making it out of twinlead as a folded dipole and feeding it with a coaxial balun (neat name for an electrical half-wave of coax) will give you better bandwidth and less coupling to every metal object in sight.

Either one is eighteen feet long though.

Agreed, JR,

Unfortunately, the "gangsta" mind has a twisted view of personal responsibility. They actually BELIEVE that it's PERFECTLY OK to do a crime as long as one is prepared to "do the time".

After they're caught, they sit around in jail with "born to lose" tattoos on their arms pumping iron and acting tragic.

Well, that was informative. I missed the Dateline, wish I could have caught it. I like the whole Cajun aura thing that surrounds this topic. Lends even more mystique to the idea or notion that we're gonna have the cb cops in fatigues running through the neighborhood hiding behind trees wth their M-16s ready to shoot me on sight for talking to Bob on triple 5. Like in the movie, "Talk Hard" with Christian Slater. Any one thats ever been to the bayou country knows a cajun can be a force to be reckoned with. I ain't all that up on politics in Louisiana, but I'm gonna do some reading.

Captain,

I do not usually allow myself the luxury of answering your slanderous posts, but this time I shall make an exception.

My posts dealing with legal CB have been a welcome breath of fresh air to a newsgroup grown stale with arguments about who's band-splattering amp is best. You obviously take exception to my brief, celebratory announcements concerning the FCC's actions to punish the flagrantly illegal Exports-R-Us. I believe that all my hard work and effort to call attention to the plight of legal CBers has earned me the right to crow, even if mildly, when justice has been served.

You may or may not agree with me, but your attacks on my family heritage and veracity are certainly OFF TOPIC here. Please note that only after repeated attempts to vandalize the Voobner Family web page (by resetting its counter) did I even mention it here. Also note that information regarding my status with the Commission is discussed only in response to queries from various detractors bent on defaming my person.

It is worthwhile to note that a group of hard-core illegals was so anxious to rid the newsgroup of me that they, after some effort, hired the likes of you with the express purpose of silencing me. You may turn your flamethrower on me if you wish, but it shall not slow my progress.

Sincerely And With Conviction,
Aaron H. Voobner

I have said 2:1 all along. You said 2.7:1 and I showed you exactly
where you said it:

Are you saying the impedance 25 + j0 yeilds the same SWR as
40 + j0?

You're not making sense. Give us an example.

No conversion is required. Zl is a complex number representing the
antenna impedance including its reactance.

> for a given SWR the reflection coefficient is undefined.

Sparky, you recall incorrectly. And your math knowledge is poor.
Give it up.

You asked for the "magnitude of the reflection coefficient."
Magnitude is a scalar. It is not complex and has no angle.

Your odometer displays magnitude of miles traveled. It doesn't
tell you what direction you went.

For any given SWR, you can find the magnitude of the reflection
coefficient. The formula is in the ARRL Handbook.
What you cannot find from SWR is the angle of the reflection
coefficient. The SWR does not provide enough information.

> Just to save you the trouble of reading, and I know you have trouble
> reading, here are the equations:

>
> So I'll ask you again, what is the reflection coefficient when the SWR
> is 3?

You've changed your question. First, you asked for the "magnitude
of the reflection coefficient"; now you ask for the reflection
coefficient.

The answer to your latest question is 0.5 at some angle.
You have not provided enough information to determine that angle.

I say you DON'T have a right to crow, you DON'T have the right to LIE, you
don't have a right to ACCUSE anyone who doesn't agree with you, and you DON'T
have the right to speak for LEGAL CBers. Speak for YOURSELF, retard.

> You may or may not agree with me,
> but your attacks on my family heritage
> and veracity are certainly OFF TOPIC here.

You're right, I DON'T agree with you. I have NOT attacked your "family
heritage", you paranoid lying ass-monster. Even should I have damned your
lineage all the way back to ADAM, the fault for it would LIE WITH YOU for
DIVULGING IT where it DOES NOT BELONG. NOBODY cares where your wife is from.
NOBODY cares what your childrens' names are. NOBODY cares what your pet peeves
are, or what your children or relatives say. THAT crap is OFF TOPIC.

> Please note that only after
> repeated attempts to vandalize the Voobner Family web page (by resetting
> its counter)

Anyone who is net-savvy KNOWS that's an idiot newbie's LIE. Unfortunately for
your sympathy campaign, NOTHING AT ALL has been done to you, your webpage or
your family. It's actually funny to read your accusations because they are so
far-fetched. Get a clue, Oh Persecuted One.

> did I even mention it here. Also note that information
> regarding my status with the Commission is discussed only in response to
> queries from various detractors bent on defaming my person.

Your status with the Commission is "EMAIL-SENDER", you ridiculous looney. Prove
otherwise and your "person" will not bear such easy "defaming" by the
detractors YOU have insulted, accused, harassed and told your ridiculous newbie
lies about.

> It is worthwhile to note that a group of hard-core illegals was so
> anxious to rid the newsgroup of me that they, after some effort, hired
> the likes of you with the express purpose of silencing me

This is a great example of your totally insane accusations. The selfsame net-savvy people who laugh at your "vandalized hitcounter" also laugh about this.

I must say, I find it flattering that you think my work is worth money.

The only reason I won't EVER reply to your no-talent friend who enjoys flood-posting to this group is because he is an admitted homosexual. I refuse to have an attention-seeking gaylord beating off over a response from me.

. You may turn
> your flamethrower on me if you wish, but it shall not slow my progress.

I will definitely flame you, because you're a haughty, snooty little fruitcake telling lies and acting like a complete fuckstool in a friendly group I enjoy reading and learning from. I shall not slow your progress toward being COMPLETELY IGNORED as fuckstools and self-important pea-brains such as yourself ought to be.

That sort of monitoring can be very interesting, but it's totally
illegal in this backward country. So if you and/or your friends
do it, you'd be advised to keep your heads down and do your
monitoring in private.

A little bit of traffic analysis on pagers can be very
revealing about the embarrassing things which are kept out
of the news! Just don't get caught doing it!

Against my better judgement, I have decided to answer the good Captain's latest round of flamboyant vituperation with some cold, hard facts:

1) He can't ever admit to being hired by a coalition of illegal CB boosters and privately advising them to vandalize my family web page by attempting to reset the counter.

2) This cut-rate Ahab appears bent on my destruction in order that illegal CB may flourish unopposed on the Internet.

3) His aim is to fill the newsgroup with shreiking, emotional screeds and laboriously cross-referenced tracts that feature me and my family as their target.

Is there no end to this poor man's Melvillian obsession with me? Perhaps there are those who don't believe his crackpot quest is dangerous. I politely call their attention to "Sea Captain Deadbeard"s virtual vow to "chase" me and my family "round Good Hope, and round the Horn, and round the Norway Maelstrom, and round perdition's flames".

One can never predict what a sick individual such as the Captain may do next. Therefore I am forwarding all future posts by him to abuse@cotse.com and keeping a write-protected log of his threats and accusations in my database.

Sincerely, And With Added Gravity,
Aaron H. Voobner

| >so if your kids play records which sound like a load of QRM then maybe
| >that's because it *is* :)]
|
| That sort of monitoring can be very interesting, but it's totally
| illegal in this backward country.

aye, something I am indeed aware of. hence the use of easily portable kit ;)

its still illegal in many other EU countries too, [not that it stops people]
not suprising given what much of HF is used for ;) I can't believe some of
the [state] laws re scanners in the USA! Land of the free???

some years ago I *used* to be a pirate broadcaster [at one point it was the
only way of getting some *real* underground music on to the air in
England] - not now though, I know that this does to aircraft comms etc with
bad TX kit - there's too much drugs and crime in that scene anyway - and
have gone legit now thanks to RSLs.. at least listening isn't causing anyone
any potential hassle [its not as if we're all suddenly going off to spy for
Vlad Putin now in return for drugs ;)]

anyway thanks to Major, Blair, Straw etc the *parties* this music gets
played are now classed as illegal!

FWIW a British comedian [mark thomas] regularly broadcasts chunks of
"numbers stations" across C4 programmes and websites etc along with
explanations of what they are about...

I'd bet there's *very* few people on these 3 groups who *haven't* listened
to something they "shouldn't have done.." and what about the listeners in
countries [hams or otherwise] where there are civil wars who find out and
help pass on vital information?

didnt' Marconi get a swift visit from the GPO pretty soon after he keyed
up;) ?

Well... it appears that the days of blatant amp selling are finally ending. I have nothing personal against Steve but I don't think he would be so foolish as to pay the fine and continue in the amp trade. The next time they come to the door might involve a prison sentence. You have to remember... these are federal agents and have they have much power. Thumbing your nose at fines from the FCC can be a very poor decision.

$275 COD (Shipping Included)

The SkyWave2879 mobile amplifier has been designed to give maximum
performance while eliminating unnecessary gimmicks that do nothing to
enhance performance and have a negative impact on reliability.

Telstar engineers have developed the SkyWave2879 by sticking to the
basics
and coming up with a high quality robust design.

Telstar uses nothing but premium electrical and mechanical components
throughout to give the consumer unparalleled performance, value and
reliability.

Features

Black Anodized All Aluminum Heavy-Duty Chassis

Extra Large Heat Sink

"No Bias" for High Efficiency

All Mode Operation (AM, FM, SSB)

Automatic Transmit / Receive Switching with Dropout Delay for SSB
Operation

Reverse Voltage Protected

Polarized Detachable Power Cord

THIS AMPLIFIER IS ILLEGAL TO OPERATE ON CB RADIO

Electrical

Transmit / Receive Switching Automatic COR or *Remote Keying Signal
Amplifier Configuration 2SC2879 x 2
Current - Receive 100uA Typical
DC Operating Voltage 14V Nominal, 18V Absolute Maximum
Efficiency 55% Average Over Various Drive Levels
Input Impedance 50 Ohm Port (VSWR 1.5:1 or Less)
Current - Transmit 25A Maximum
Input Power (DC) 450W Maximum
Input Power (RF) 10W RMS Maximum
Output Power (RF) 110W RMS Typical @ 14V/28MHz @ 4W AM Drive
*RMS Measured into a 50 Ohm Load with no Modulation

220W PEP Typical @ 14V/28MHz/12W PEP (SSB)

Operating Frequency Range 26 to 30MHz
IMD (Two Tone Test) -24dB Minimum @ 110W/28MHz
Operating Temperature Range -40C to +50C
Output Impedance 50 Ohm Port
Power Gain 13dB Minimum @ 28MHz/14V
Protection Fuse 30A Fast Acting Glass Type
Relay Pull-in Time 50mS Typical (Receive to Transmit)
Relay Release Time 0.5S Typical (Transmit to Receive)

Mechanical

Dimensions 5ï¿½"L X 4ï¿½"W X 3ï¿½"H
Chassis and Heat Sink Material Aluminum
Power Connector Four Contact Polarized
Weight 4.0 Pounds
Input / Output Connectors SO-239

Installation

IMPORTANT

THE SWR IN THE SYSTEM SHOULD BE BELOW A 1.5:1 RATIO PRIOR TO INSTALLATION OF THE AMPLIFIER. THIS REDUCES EXCESSIVE HEAT DISSIPATION IN THE AMPLIFIER WHICH COULD RESULT IN PREMATURE FAILURE

1.) Find a suitable place for the amplifier. The amplifier can be located anywhere that the airflow around it is NOT restricted and where it is NOTdirectly exposed to outside weather elements. The amplifier may be positioned in any orientation.

Although most installations place the amplifier near the radio, possibly the best location for the amplifier is in the vehicle's trunk where it is not only out of the way but closer to the antenna. This keeps the coaxial cable short from the amplifier output to the antenna and eliminates unnecessary RF losses.

2.) Connect the polarized power cord to the back of the amplifier.

3.) Make solid connections to both positive and negative with a minimum of AWG #10 wire as shown below.

An optional SPST switch can be installed anywhere in the positive power lead if remote operation of the amplifier is desired. This would allow the amplifier to be turned on and off from the passenger compartment while the amplifier could reside in the trunk of the vehicle.

4.) Connect a 50 Ohm coaxial cable between the connector marked XTMR on the amplifier to the output connector on the transceiver. Connect the 50 Ohm coaxial cable from the antenna to the connector on the amplifier marked ANT.

Operation

Once the SkyWave2879 is connected properly to the system, operation is simple and straightforward.

1.) Turn the power switch on the front of the amplifier to the ON position. The amplifier is now ready for operation!

If you are using the remote powering scheme, the power switch on the amplifier should always remain in the ON position. In this configuration the remote SPST switch controls the amplifier exactly as the switch on the front of the amplifier did.

When the power switch is moved to the OFF position, the amplifier is no longer active and the system will work as if the amplifier was not present. By switching to OFF the transceiver and antenna are effectively connected together.

The SkyWave 2879 when in the receive mode draws extremely low currents and therefor if the unit is inadvertantly left in the ON position will not significantly drain an automotive battery.

*For special situations where the carrier power level is below 0.5W, a remote keying signal can be multiplexed directly on the amplifier input for transmit / receive switching. This signal is any DC voltage level from 5 to 15V. Contact Telstar Electronics for details on using this feature.

Warranty

The SkyWave2879 is guaranteed to be free of defects in operation and workmanship for a period of 90 days from date of purchase. This implied warranty covers all components except power output transistors. Warranty shall be void if Telstar Electronics determines the amplifier has been used for other than intended purpose. Telstar Electronics retains the right to mediate and evaluate all warranty situations. An RMA (Return Material Authorization) number is required before a warranty claim can be processed.

Glossary

COR Carrier Operated Relay - Method of Switching from Receive to Transmit Automatically.SWR Standing Wave Ratio - A Voltage Ratio that Indicates the Impedance Match Between the Transmitter and the Antenna.

The lower the Ratio, the More Power is Directed to the Antenna.
IMD Intermodulation Distortion - Method of Determining Harmonic
Content of an Amplifier.DSB Double Sideband - Transmission Mode More
Commonly Referred to as "AM".

Telstar Electronics

"Quality not Quantity"

All Inquiries Promptly Answered by bgriffey@megsinet.net

End of quote.

You must of anticipated this "FCC bust" a long time ago.
After you consulted with the Telstar engineers you must
of decided, just like Chuck, to quit while you were ahead?

So you too, no longer sell these amps/doorstops?

Professor,

Curious Dan, Mr. Pain, Twistedhead, Tim Nebo, IceColdNYC, Train, ScottUnit69, and a whole BUNCH of other brilliant thinkers have said again and again in this newsgroup that "the FCC doesn't care about CB" and "CB laws are silly, like jaywalking", etc.

So why should Steve knuckle under? These are "trivial" rules, yes? I suggest he do nothing. Or else scrawl some kind of obscenity on the FCC ticket and send it back to them. After all, "illegal CB is here to stay", right? Where's his BACKBONE?

The entire illegal contingent in this newsgroup is COUNTING on him not to back down. After all...

...CBers have the "RIGHT to be illegal" -- don't they?

Aaron

>Sparky, you recall incorrectly. And your math knowledge is poor.
>Give it up.

I knew you wouldn't do the work.

gamma = (Zl - Zo) / (Zl + Zo)

= (Zl - Zo) (Zl - Zo) / (Zl + Zo) (Zl - Zo)

= (Zl^2 - 2(Zl)(Zo) + Zo^2) / (Zl^2 - Zo^2)

All terms are squared but one, 2(Zl)(Zo), defining gamma as a complex
variable. Plug in complex impedances and you will get a complex
reflection coefficient. I recalled correctly. If there is something
wrong with my math then point it out.

>You've changed your question. First, you asked for the "magnitude
>of the reflection coefficient"; now you ask for the reflection
>coefficient.

Then why did you respond to this -

>> In a typical install, the RC value is important. We see SWR issues
>> thanks to that value - and pertains to coax lengths and antenna
>> reactance.

with this?

>SWR is just another way to express the magnitude of the reflection
>coefficient.

You changed the subject by interjecting something off the topic.

>>And, since you seem to have forgotten, what are your many references
>>that you claim makes me a liar? Since school has started up again you
>>should have no problem finding at least one. Don't forget to ask your
>>librarian about the book you said you would get almost a month ago.

No response, as I suspected. So what's the problem? Where are these
piles of references? Is Indiana still closed for the holidays?

Well a few things are clearer now. While there were some other members of
the College of Cardinals (House Committee Chairs) involved, it was always
a wonder that anything happened that Billy did not at least bless.

I hope that you don't think HR2346 was a ham bill; the main aim in life
most of us had is staying the hell out the flak, not having it aimed at
CB. Same with the trucking industry.

From what I read out of it (Thomas) the grant is extended only to equipment (non Type Approved) and frequency use. Can't see the gendarmes or Surete or whatever sitting with freq gear -- maybe a receiver on 28.085 -- and do them in at the weigh stations. Commercial vehicles do require probable cause to inspect and a license brings the whole thing to a grinding halt at least on the equipment issue. Does not seem to be a major fund raiser.

But it does explain a few busts in the New Orleans office, doesn't it.

Thank you, sir.

Two problems here. First off, I don't think any Old Timer or General or above has in my tenure around here given CBers any crap at all.

Second, I was first licensed in November of 1954 which predates CB (1 Sept 58) so it would have been a bit difficult to have served some entry-level time on CB.

Lance the boil on your butt and the world will feel a lot better.

1062. N8wwm: A Historical Background

Newsgroup: rec.radio.cb
Date: 2001-01-07 02:13:04 UTC
From: Rag Chew 442 <sezfamily@email.com>
Message-ID: <938jbd$k9l$1@nnrp1.deja.com>
Source record: 67063

After much research into the life and times of N8wwm, I have
discovered the following history that should be of interest
of all. It seems that N8wwm's hate for CB started as a young child.
You have to understand that he was raised in a small town
of which his mother was the only professional whore. She
worked night and day on her back to support poor N8wwm,
after her husband left her because he got sick of N8's none stop
whining and crying. It was one night that started N8's
hate for CB. His mother, while servicing the biggest, blackest,
most well hung trucker in the town, did not realize that
her ass was on this truckers mike and keyed it through the whole
event. N8 loved to stay up late listening to his Mom's
home base station while he was being baby sat by his uncle Sid
or also known as his mothers pimp. Well poor
N8 was horrified to hear his mother moaning and groaning as the
big black trucker gave all 12" of black meat to his
mommy. To this day poor N8 hates Cbers, Truckers and and can't
even look at a big black polish sausage. So keep in
mind as you respond to N8's cries for attention, that it is not you or
me he hates. It is hate for that big black trucker that
made his mommy cry!

It is now obvious to all that I can make you spout profanity at will. It is now obvious to all that that is all you can do. it is now obvious to all that you are incapable of anything remotely resembling normal human conduct. It is a laugh to see you spouting your junk on here.
N8wwm pushes your button and you jump. Of course, you are incapable of thinking about that concept, due to your own obsession with me. It is extremely funny to watch. I encourage you to keep it up as long as you want.

Also, clinging to the wishful thinking that I am Voobner, deadbeard, Professor, Sparky, etc. avails you nothing. It only proves the delusional aspects of your personality to an even greater degree.

I laugh in your face, but I am still kind enough to refer you to the information below, so that you can hopefully gain the perspective that will enable your thinking to the point that you decide to undergo a species change operation and become a human being. Doubtful. LOL

Well,

They say that curiosity killed the cat, so......I visited the webpage. What I just can't fathom is the point of all the fingerpointing and flames. It isn't doing any good. You would be better off just to leave it alone. Coming on here arguing about "illegal" CB is not helping anything. Everybody on here knows I don't agree with illegal operations, BUT word-slinging isn't gonna change it. People are going to do what they are going to do. All I can do is try to operate within the laws that govern MY own operations, try to get along, and help people with questions if I can. That's what YOU should be doing. If you want to "change" what someone is doing, perhaps you should use less vinegar and more maple syrup. You might be getting a big kick out of jousting with CBers, or maybe it makes you feel good or more of a man (mistakenly). People messing with your web counter and using obscenity, etc. is caused by your own tactics. I suspect your "association" with FCC is mostly in your own mind. After all, most of us have Riley's email addy and *could* do the same thing you (are?) I mean no disrespect to you, I only disagree with your tactics. Tell me, have you ever MET Riley Hollingworth? Have you ever talked to him PERSONALLY? Here's a little test: Tell me the name of his home town. Can you do that? I bet not. Again, I am not doing this to disrespect you. I AM getting tired of all the flames and such. I just think that you have become obsessed with this thing and have made yourself believe you are part of the "inside" loop. (Old detective show theme playing in the background)
As to Riley and the FCC, I HAVE met him, I DO know him casually and talk to him when he comes into the area (about HAM radio--not CB). But I am trying to disprove your allegations of "working" closely with FCC to bust ANYBODY. Oh, while you're at it (this is an easy one), tell me Riley's callsign and amateur license class.

Now I've said my piece and I'm pulling the switch. OOOPS! I forgot. Don't you realize that it is not illegal to TALK about amps, modded radios, modulators, etc on a newsgroup? I could come on here and discuss amp design, circuitry, keydowns, swap meets and anything else I want to. Now, it probably would cause an FCC agent to look closer *IF* I were advertising CB amps for sale, or if I blatantly wrote that I was running 10 KW at home. BUT it is perfectly OK to talk about "cutting off" somebody's lips, dropping the "maul", or telling someone even how to build an amp because it doesn't imply that ANYONE is going to build one. They're just TALKING about it, OK? Ever heard of free speech? THAT, my friend, is NOT illegal.

******,

We'll try again with a new administration.....

Petition for Regulatory Relief of Burdensome
And Unnecessary Rule that Inhibits the
Public's
Simple and Unencumbered Access to this
Communications Service.

GREETINGS:

SUMMARY

Although Subpart D Citizens Band (CB) radio is
intended as a short range
communications service1, users should not have
to concern themselves with the
possibility of inadvertently contacting
another CB station farther than presently
permitted by rule. Further, CB operators
should not be constrained from contacting
distant CB stations in order to facilitate
communications necessary for personal
convenience, navigation, traveler assistance,
and least of all emergencies and
disaster communications.

The propagation characteristics of frequencies
surrounding the 11-meter band are
well understood to be capricious2 and, in as
far as the average consumer is
concerned, unpredictable. Utilizing a consumer
device such as a CB radio should be
a simple and unencumbered process. A user
should need only to exercise common
sense and courtesy, not posses a technical
understanding of High Frequency (HF)
radio wave propagation, nor a regional
geographic frame of reference limited to an
arbitrary radius.

DISCUSSION

Whereas; the Federal Communications Commission
(Commission) has objectively
stated that unnecessary and burdensome

regulations should be eliminated or
streamlined3.

Whereas; the CB Radio Service is intended
primarily for use by consumers and small
entities4, rather than by trained or licensed
operators or technicians.

Whereas; in spite of sporadic communications
that do occur beyond the existing
155.3 mile limit, such communications will not
substantially alter the primary use of
CB as a short range communications service.
This has been well evidenced for
decades, particularly through and during the
previous and present 11 year solar cycle
peaks. Such long distance (DX) communications
can and do occur on a frequent
basis, with or without the knowledge of the
operators involved. Such DX
communications have not materially affected
the given short distance purpose use of
the CB Radio Service, as demonstrated by the
functional, actual everyday use of
short distance CB radio communications by such
entities as over-the-road truckers,
automobiles travelling in groups or caravans,
and neighborhood watch groups.
Admittedly, there are times when
communications from distant stations do interfere
with local communications. This occurs
however, whether the distant interfering
station is communicating with a local station,
with respect to the station being
interfered with, or with another distant
station. There is little operational control that
can be exercised by any party in this example,
except common courtesy under
existing CB radio traffic rules relating to
permitted communications and priority of
traffic.

Whereas; nothing in this petition seeks to
permit the operation of other than
presently type accepted or certified CB radio
equipment. This petition does not in any
way seek higher authorized transmitted power
output levels or expanded operating
frequencies or any sort of refarmed
channelization plan. Additionally, nothing in this
petition seeks to change or add to existing

modes of communication presently
authorized in the CB Radio Service.

Whereas; CB communications utilizing
authorized 12 watt Single Sideband (SSB)
mode are more likely than 4 watt Amplitude
Modulated (AM) signals to travel longer
distances by means of ionospheric reflection
(skip)5. Additionally, these higher power
SSB signals are more likely to travel greater
distances as ground waves as well6.
Therefore, it is even more difficult for SSB
mode users to determine the range of their
communications without actually first
establishing an errant DX contact.

Whereas; emergency communications should never
be subject to any law, rule, or
regulation inhibiting the immediate transport
of such message to any station in a
position to render aid or to forward such
message.

Whereas; disaster relief communications,
including tactical relief logistics, health and
welfare traffic, and point-to-point
communications between and among relief and
public safety agencies, organizations, and
individuals need not be restricted from
making maximum use of the low cost and ease of
deployment of CB radio equipment
to mitigate the effects of such disaster.

Whereas; motorists and other travelers need
simple access to their CB
communications without regard to having to
assess their immediate location in
reference to other potentially distant
stations. This is particularly true for motorists
who are presently required to know not only
their instantaneous location, but also
potential distances of stations contacted. The
present rules require such traveler to
figure a dynamic regional geography extending
well beyond 155.3 miles, in order to
avoid fear of running afoul of this regulation
simply by keying the microphone and
contacting the "wrong" station. Relief of the
distance of communications limitation
will enhance driver safety by allowing CB
operators, while driving, to complete their

communications promptly and thereby devote
more attention to the operation of the
vehicle.

Whereas; CB calls and communications for the
purpose of determining the utility and
operational ability of legally authorized CB
station equipment and antenna systems
should be unencumbered of distance
limitations. Such relief will enhance the value of
such test calls and communications, and
establish operator confidence in both the
reliability and limitations of the band and
such CB station equipment. Such on-air
testing including DX calling would not
materially disrupt the existing, ongoing,
purposed, and predominantly de facto use of
the CB Radio Service as primarily a
short distance communications service. Again,
this scenario has been well evidenced
for decades, particularly through and during
the previous and present solar cycles.
And still again, such DX communications have
not materially affected the given short
distance purpose use of the CB Radio Service,
demonstrated by the functional,
actual everyday use of short distance CB radio
communications by such entities as
over-the-road truckers, automobiles travelling
in groups or caravans, and
neighborhood watch groups.

Whereas; the absence of the 155.3 mile CB
communications limit will serve to relieve
FCC enforcement personnel of a portion of
their workload, freeing such resources for
more important enforcement issues such as
dealing with cases of patent abuse of
the band including malicious interference,
profaning, and music broadcasting.

Whereas; until contact with another CB station
is actually commenced, the calling
CB operator has no way of knowing if the
station contacted lies within or without the
presently authorized 155.3 mile radius! Thus,
inadvertent and otherwise innocent
violations of the 155.3-mile distance
limitation do occur. Consumers must be
protected from this unreasonable, unnecessary,
ineffective, and no longer useful

regulatory burden.

SEEKING

Now therefore; this petition seeks regulatory relief by these means:

1.) Immediate repeal of 47 CFR §95.413(a)(9) found within CB Rule 13, herein paraphrased: "You must not use a CB station-- § To communicate with, or attempt to communicate with, any CB station more than 250 kilometers (155.3 miles) away;"

2.) Modification of 47 CFR §95.413(a)(11) found within CB rule 13, herein paraphrased: "You must not use a CB station-- § To communicate with stations in other countries, except General Radio Service stations in Canada;". This section should be modified to permit communications with stations in other countries, subject to any restrictions or exclusions that may be imposed by either the International Radio Regulations of the International Telecommunications Union, or of the government of any country affected so by. In any event, unrestricted distance of CB communications must be allowed within or over any area of the world where radio services are regulated by the FCC, including within the territorial limits of:
The fifty United States.
The District of Columbia.
Commonwealth of Puerto Rico.
The Caribbean Insular areas under the jurisdiction of the FCC.
The Pacific Insular areas under the jurisdiction of the FCC.
Any other area of the world, except within the territorial limits of areas where radio services are regulated by-- An agency of the United States other than the FCC. (Subject to its rules.)
Any foreign government. (Subject to its rules.)
An aircraft or ship, with the permission of the captain, within or over any area of the world where radio services are regulated by the FCC or upon or over international

waters. You must operate your CB station according to any applicable treaty to which the United States is a party7.

The present authorization to communicate with said Canadian stations must continue to be embraced. Further, any rule change relative to this petition must clarify that such communications with Canadian stations is always permitted, any extant distance of communications restriction notwithstanding, whether or not such had been the original intent of §95.413(a)(11).

3.) Modification of 47 CFR §95.418(b) found within CB rule 18, herein paraphrased: "How do I use my CB station in an emergency or to assist a traveler? § When you are directly participating in emergency communications, you do not have to comply with the rule about the length of transmissions § You must obey all other rules." The statement "You must obey all other rules." is unnecessary, must be stricken, and language inserted that adds in essence, "You do not have to comply with any rule about communicating with or attempting to communicate with any CB station more than any specified distance away." This change is necessary to expedite response of emergency services in an emergency, so as not to further endanger life safety or property.

4.) Modification of 47 CFR §95.418(c) found within CB rule 18, herein paraphrased: "How do I use my CB station in an emergency or to assist a traveler? § You may use your CB station for communications necessary to assist a traveler to reach a destination or to receive necessary services. When you are using your CB station to assist a traveler, you do not have to obey the rule about length of transmissions § You must obey all other rules." The statement "You must obey all other rules." is unnecessary, must be stricken, and language inserted that adds in essence, "You do not have to comply with any rule about communicating with or attempting to

communicate with any CB station more than any specified distance away." This change is necessary to expedite information of necessity or convenience to motorists and other travelers.

The proposed rule changes herein are clearly in the interest of the public interest, convenience, and necessity and appropriate to the new deregulatory momentum8 of the Commission. Your careful and prompt consideration is greatly appreciated.

SUBMITTED

This day, 29 October 1999

1078. Re: Open Letter From Aaron Voobner

Newsgroup: rec.radio.cb
Date: 2001-01-07 03:54:19 UTC
From: "Mr. Aaron H. Voobner" <aaronvoobner@my-deja.com>
Message-ID: <938p99$oo1$1@nnrp1.deja.com>
Source record: 67080

Hi Jerry,

Riley's call is K4ZDH, Extra Class. I don't know where he lives, but I imagine it's probably close to where he works in VA. He collects Collins gear and is known to be a fan of boatanchor AM and old Corvettes. He has even spoken at the Dayton Hamvention a few times.

Of course this proves nothing, because anyone with half a brain could find this information in 3 seconds on the Web. So I'm not sure what your point was in asking me this stuff. Maybe you hoped to embarrass me. I don't know Mr. Hollingsworth personally. My contacts within the Commission are, and will remain, confidential. I hope that satisfies you.

But let's get to the real content of your post. No, it is not my intention to ban free speech. I'm sure child molesters have a newsgroup where they can talk amongst themselves and share tips. Would you seek to ban a parent who's child was molested from posting their opinions in that newsgroup? (I'm sure I'll take a lot of flak for comparing CBers to child molesters, but alllow me to point out in advance that the flak-hurlers will be missing the point entirely)

The point is this. You seem fearful of unecessarily"angering the illegal CBers". You think it's somehow impolite to mention legalities in their presence. You intimate that those who support legal CB should remain quiet and respectful of people who (for example) gleefully trade tips on how to transmit illegally on amateur frequencies.

It is my opinion that legal radio operators should NOT remain silent. By our cowardly silence, we validate the transgressions of the illegals. Look around at the (non flame) topics in this NG. It's 90% dominated by hard-core illegal CBers. Black market businesses have sprung up (unopposed) on the web dedicated to supplying the illegal CB movement with equipment.

A group of these heroes recently organized themselves into a coalition in an effort to silence me. They brought in an outside agitator who spearheaded a clandestine program of internet attacks on my personal family web page. Nice guys, huh?

So yeah, sure, let them yak about "dropping the maul" and "freebanding" to their hearts content. But I'll be there, too, telling them EXACTLY how I feel about their illegal practices.

Most Sincerely,
Aaron H. Voobner

******,

Information for all operators....
Just so you know........

I suggest that we all spend less time wasting our
resources and providing attention for "spoiled children"
and more of our time effecting some change. The boobs
(pun intended) will find something else to do when they
no longer take up our time.

73,
NA0911/Jack

http://www.uscboa.org/

get behind the revival of this renewed petition to
the FCC under the new administration. The rights you
preserve may be your own.

CB or Ham, it don't matter, you mess up my TV, U goddog beem gonna cumm
down right now, you heree me boy, (does wonders for keeping off the
neighbors tv set down here)

I ain't all that up on politics in Louisiana, but I'm
> > gonna do some reading.
> >
Heck we even hava board game called "POLITRICKS" which is like Monopoly
but set up like a Louisiana Political Rally and deal making rolled into
one!!! With more speed traps than anyother state in the union, I
wonder what this state is going to do when faced with a NEW SOURCE
OF REVENUE (be honest and forgo?) (HELL NO) Milk the Cow, Mon Cher,
dat trukker jus paid de streetlight bill and he no vote in
Louisiana so whats de worry? Hell Voobie and Doug will be running
down here any time to help (We survived the Civil War, Carpet Baggers
and Now This?) Hell, the FCC got ole Steve before the State boys
decided to tap that cash cow so see how it works?
Twisted, do read up on the Long Boys and how to do Revenue
enhancement, highly refined in Louisiana so long as no voters

hasta pay.

> (I'm sure I'll take a lot of flak for comparing CBers
> to child molesters, but alllow me to point out in advance that the
> flak-hurlers will be missing the point entirely)

No, not in the least. You're an absolute fool to make any such comparison.
Hobby radio is WORDS, you mook. WORDS. No matter how illegally these words are
transmitted, any comparison to physical crime is just your attempt to
legitimize your bitching campaign, which IS wholly illegitimate.

> The point is this. You seem fearful of unecessarily"angering the illegal
> CBers".

Implying that OTHERS are fearful is ridiculous. If they don't get on board YOUR
weirdo train it's because they're not interested in harassing people on usenet.
YOU seem fearful of GETTING OFF YOUR DEAD ASS and going around to "coffee
breaks" and hassling people about your peeves IN PERSON. You are the one who is
fearful, and rightly so.

> You think it's somehow impolite to mention legalities in their
> presence.

It's impolite to harass people who are discussing ANYTHING, dumbass. Discussion
is discussion and anything more you like to make of it is ridiculous. Maybe you
think it's impolite that I flame you? You don't like the shoe being on the
other foot, do you?

> You intimate that those who support legal CB should remain
> quiet and respectful of people who (for example) gleefully trade tips on
> how to transmit illegally on amateur frequencies.

You don't support legal CB. You support harassment. Trading tips on ANYTHING is
legal, whether you like it or not. You're a tremendous shithead if you think
differently.

> It is my opinion that legal radio operators should NOT remain silent.

Mine too. Legal ops can and should join right in and enjoy discussion AS SO
MANY ALREADY DO. You, on the other hand, just want to complain. Expect flames.

> By
> our cowardly silence, we validate the transgressions of the illegals.

Wrong again. By YOUR cowardly usenet harassment, you validate your flamings.
Being a conversational guy without harassing everyone in sight is actually a
good idea for you to consider.

> Look around at the (non flame) topics in this NG. It's 90% dominated by
> hard-core illegal CBers. Black market businesses have sprung up
> (unopposed) on the web dedicated to supplying the illegal CB movement
> with equipment.

Yes? And? There are already laws that deal with such things. Your bitching, moaning and whining about it where others don't care to hear it will only get you ignored or flamed.

> A group of these heroes recently organized themselves into a coalition
> in an effort to silence me.

That's ridiculous and exactly the kind of STUPID accusations I'm talking about. You've gone so far as to imply that I'm dealing drugs and threatening you and your family and a host of other ridiculously implausible things. You're disliked because this is your method of operation. Accusations, implications and unsupported indictments of everyone who disagrees with you.

> They brought in an outside agitator who
> spearheaded a clandestine program of internet attacks on my personal
> family web page. Nice guys, huh?

You are out of your mind. I've been reading this group regularly for YEARS. You only WISH you were that important to anyone. It's called "delusions of grandeur" and this isn't the only evidence of it you've offered. Just read what you've written. A "clandestine program of internet attacks". Paid assassins. Lurking dangers. Threats. But no subpoenas. You're grandstanding for sympathy. Or just insane. Either way, I'm going to continue to shine a light on it.

> So yeah, sure, let them yak about "dropping the maul" and "freebanding"
> to their hearts content. But I'll be there, too, telling them EXACTLY
> how I feel about their illegal practices.

First, they aren't *practices*. They are *words* and NOTHING BUT, no matter if true or otherwise. Your desire to harass people for the crime of DISCUSSION shouldn't "dismay" you when YOU are told EXACTLY what is thought of your grandstanding, insane accusations and implications, delusions of grandeur, paranoid fantasies of persecution and pathological lying. It's really just that simple. Get used to it, nutty boy.

>

This failed miserably the first time it was proposed, most notably because it is not a well-thought-out concept, and secondarily because of the embarrassing lack of CBers willing to sign the petition and thus reveal their names and addresses.

When I have some time I'll go through this document paragraph by paragraph and shred it to pieces. But in the meantime, I'll briefly summarize the major defect of this proposal: which is that a government-sanctioned hobby radio service designed to be available to all citizens such as you propose - already exists - and it is called Amateur Radio.

Nice comeback chief, I always love to see windbags like you blow bubbles in your own turd juice. As your well aware, aside from my slightly abrasive e-mails, I have been very polite and courteous when speaking to your staff on the telephone. Even after I had to let the phone ring a total 45 times and was hung up on twice when I called on 12/1/2000. At no time did I whine on the phone to your staff, or say, or use, anything even remotely resembling an aggressive or rude attitude or tonality of voice.

Your staff kept putting me on hold, hanging up on me, and then after I called back placing me on hold again, and then popping back in and out to ask if I was the one holding for the refund. I only mentioned that I was calling about a refund twice, and that was because I was asked why I was calling. There was no whining of any kind, period. They would ask me who I was holding for, and I said I did not know, and they would ask if I was the one holding for the refund, and I would reply yes. Then the CFO, as you termed her, came on and said my refund had been sent U.S. Mail. I asked when, and she said, about two days ago. I asked the amount, and she said she would have to go and look it up. She then got agitated, and told me it was the same amount we had discussed before, meaning on 11/13/2000. Then she said goodbye and said that was the best she could do and slammed the phone down. I never even tried to say anything to her, or the initial people who answered the phone, other than what is described here in this post.

As far as your claim of my having given you an inaccurate address, this is another lie from you. I have only given your company one address in my dealings with you people, and it certainly is the correct address.

So you sent out the check and it came back to you. That had nothing to do with me, or any information I provided your company im afraid. But, rather, I suspect, because there are two versions of Harter street in this city. One being the Harter Ct version I gave your company as my address, and the other being Harter Avenue.

I would say that your staff put Harter Avenue on the envelope with the refund check enclosed, if their ever was one, instead of Harter Ct, and that is why I never got it, and the reason it came back to your company. The screwup is on your end, not mine.

Oh and by the way, I have had the same phone number and address for going on 9 years. But my mom, on the other hand, had her phone number changed in late October. And it was my moms address and telephone number you were provided with for the radio order, not mine. The reason for this being that I am not home during the day, and u.p.s. just loves to dump prepaid parcels on doorsteps without a delivery signature. Left all

alone, the package could be stolen. So, for my radio order with your company, I used my moms address and phone number, because she is home during the day to receive u.p.s. packages. And since I know now that you are so interested, she lives in a nice apartment on a private drive, not a trailer park.

This being irrelevant because I provided the updated telephone number during my second call of three regarding this matter to your company in late November. Caller I.D. indicated your company never called anyway. Maybe the same employee who took down the new number from me is the same employee who addressed the refund payment envelope with the wrong street?

As far as my ability to properly operate the radio that I purchased from your company, you do not have the slightest clue about what you are talking about. None. And again you are lying when you stated that I tried to service the radio myself. That did not happen, period. Maybe you should stop listening to the voices on the private line in your head. The only thing I did to that radio besides make normal adjustments to control functions, was to replace the fuse when it blew the first time I turned it on. You sold me a messed up radio, and you are lying about me on this newsgroup to get out from under and put the blame on me even though it was not my fault.

Also, I never stated that you stated that you would not warranty the unit. What I said was that you stated that the unit did not come with a factory warranty, even though my purchase receipt for the radio says that it did, and because of such, your company would in effect warranty the unit by issuing a full refund to me.
So im a deadbeat because I did not use a credit card to order my radio from your company. This is a tragic and misguided attitude on your part. But, one, being that you made it known in a public forum, that allows more than a little insight into the recesses of your less than stellar mentality. It's more like you dinks cannot even make a phone call, answer an e-mail, or mail a letter competently. At least in this case, no matter how many weeks or even months you are given. You have had the radio back at your company since 11/9/2000.

I never received the check, and I was treated so rudely when I would call to check on it, that what was I supposed to think? Your employees would not let me ask a question on the phone without hanging up on me, would not return e-mails, etc.

Even your employee David, who seemed very helpful a courteous when I was ordering, would not return e-mails I sent him inquiring about the status of my refund request.

Your trying, to make this whole mess out to be my fault. Which is a bunch of crap as you are well aware.

I think my first e-mail to your company complaining about having been sold a defective radio made you angry. And so you and your crew decided

to have a little demented impish fun, and play around with my refund to get revenge on me. Thats my opinion of this situation.

I do not have time to waste building web pages to expose dumb asses like you and your treehouse operation you call Express Electronics Inc, CEO...but you and your games left me no choice. If you have to call me names that do not apply to me because I purchased a radio with a money order...when time has proven the reality is that you and your robots cannot competently issue a refund unless it was a purchase by credit card, then maybe you should hire some employees whose I.Q.s extend into the triple digit range. This way, besides nifty things like being able to sort their names out of the alphabet, they would also be able to think their way through the world class complicated process of issuing out and completing a refund on a returned purchase that was paid for with a postal money order.
In my opinion.

Your childish and inaccurate response to my webpage, and private e-mail sent to you 1/6/2001 that you decided to answer on this radio newsgroup, will most like sour a fair number of folks attitudes toward anything your even remotely involved in.

Im sure these revised attitudes, over time, will amount to much more than $320.

You have a good one CEO...and ah, im still waiting for my money.

:+> > j0 - at any Rohm factor, becomes a constant, you still get the same
:+> > SWR
:+>
:+> Are you saying the impedance 25 + j0 yeilds the same SWR as
:+> 40 + j0?

Hmm, well, I can see where that could be misconstrued. The Rohm values will determine SWR when j-factor is 0. The antenna provides a resistive load, therefore the j operator is 0 - you see the Rohm-ic value of the load anywhere along the coaxial line. The j-operator become constant - besides, you get a "divide by zero" error. ;-)

Perhaps that is a better way of putting it.

:+> > When reactive elements are present at the antenna, their own effects
:+> > are not necessarily repeated as a constant through the coax. It does
:+> > have a factor when the load and coax impedance are not equal, and the
:+> > Rohm value with the jX factor is not 0.
:+>
:+> You're not making sense. Give us an example.

Ah, ok, let's take a look at this from two vantage points.

Coaxial input impedance, and the complex impedance an antenna will have on the coax.

At least three formulas come into my mind here as far as looking at an antenna with a different impedance than the coax.

Z = SQRT(Z * Zl)

Z = jZo TAN(w Zo C l)

Z = JZo TAN(2 PI F Zo C l)

Which one do you want me to work with?

Regards!

No no!
Based on the last, presidential, election, it seems that the way to do it is to put the stoopid one (Bush) in the top spot as the figurehead and let the smart one (Cheney) operate in the shadows. SCD can, and I'm sure will, do much more damage from his current position, don't you think? :-)

Good point, and it is hard to tell just how the building will react. A
cheap tuner should work fine.

>Similarly, making it out of twinlead as a folded dipole and feeding it
>with a coaxial balun (neat name for an electrical half-wave of coax) will
>give you better bandwidth and less coupling to every metal object in
>sight.

I don't know if it is worth the additional construction, but it is a
good thought. The alternative would be to extend it farther out from
the window, i.e, use a longer boom.

Doesn't a folded dipole have a 300 ohm feedpoint impedance? It has been
years since I built one, so I may be misremembering.

If so, then a simple 75 ohm coaxial balun will provide the desired
impedance transformation.

(Associated Press) REC.RADIO.CB. January 6, 2001.

Notorious Internet Troll and UseNet flame-artist "Sea Captain Deadbeard" was confronted with a bitter taste of his own taunting, trollish medicine today and came away shattered and shaken. The recognized Usenet flamer cried "foul" during a news conference at AOL headquarters in Vienna, Virginia.

"Aaron Voobner was supposed to be a stupid newbie", wept a defeated DeadBeard, "he wasn't supposed to get all smart-alecky, like, out of nowhere". Attorneys for DeadBeard say their approach will be to claim that Voobner is actually a Troll, not the Captain. They also will file a motion that Voobner refrain from the use of parody or any type of witty remarks as they severely hinder the Captain's advantage. "Voobner started off acting like a dullard. The Captain thought he'd be an easy mark. Now he's struggling just to stay afloat".

Attorneys for Aaron Voobner say they plan to appeal the motion.

Hello All.
Just a little observation from a new subscriber. All the flame wars make this almost seem like I have my CB on. Are we not supposed to help each other out here? I just recently started getting back into CB, and have made a few observations while on the air. Truck drivers hate 4 wheelers. I guess they drive those trucks everywhere and don't own cars. They also own channel 19. I don't know when they bought it, but o' well.
The few people still on the air are for the most part, a good bunch, but the few A'holes ruin it for everyone. It seems like the people who have the most time on their hands and could promote the hobby are the ones who deadkey, make noises, sing, cuss, and every thing else BUT communicate.
And why the fuss over illegal CBs? That's been done on every radio band since Marconi. I used to run 45 watts, which was enough to get me out of the rural area I was in. I knew people who ran 1000+ watts, but figured if they had the money, more power to them.(pun intended)
And as for the Hams. I listen to 2 meter on my scanner. They are more polite and professional, but still have no tolerance for CBers. Just having a license to do your thing is no reason to be so pompous. I used to have a license for my CB. Now you don't need one. If the Hams keep making fuss, the next step is a no-license license. 2 meter is probably headed that way now. I remember an old guy taking me in his "shack" when I was growing up and working Mexico. He and his friends were all supportive of anyone interested in the radio hobby. As I get back into this, I'm finding that Hams tend to be stand-offish, like they're guarding some big secret. I mean no disrespect, but I don't know if I would want to be a Ham today. I don't fit in in their secret society. I guess I'll just fire up the ol' CB and talk to whomever is available, amid all the cussing, whistling, singing, farting and whatever else.
And please, help make this a better group. Don't dignify the trolls with a response.
Thanks for hearing me out.
Tim

Yes - I dont think I would have become licenced if SSB on CB was legal.

Hello Tim: Ok yeah there's a few trolls, but there always has been and always will be.

This newsgroup is a great place to read and learn many things about radio and such. I also read the other radio related newsgroups when I can, another great source of information. All the other newsgroups have trolls also, so again its best to just ignore them.

Keep an eye on this newsgroup and you will see some great postings.

Jay in the Great Mojave Desert, ... just down the road ah ways from the fillin station.

It has been said many times out there that nobody has ever seen a SkyWave amplifier... and that they don't exist. So what's your point?

Tim,
Get used to it... This is the way this group has been for three years.
It gets worse all the time. You will get no useful information here.
This is a place to come and fight when your radio is unavailable.

It's never recommended to operate the transmitter into a "no load"
condition. When this is done... all the power that should be radiated
by an antenna is being dissipated in the output transistor instead.
This will destroy the transistor. If your unit is still transmitting...
chances are you have not sustained any damage. You have learned an
important lesson that applies to virtually any RF transmitter.

Greetings!

Don't pay attention to the ol' Professor, he's getting old now, kinda senile too.

Considering his most recent effort, the Speech Processor he was working on, tended to fade into oblivion. Such a shame.

And that 2-pill SkyWave amp, posted as Spams to the group to the point that he lost his address due to a TOS problem at megsinet.

What's funny, he only spammed one NG, this one, but none of the other big-8 or anything with rec.radio.* groups. Only this one. Go figure? Oh, the page did say that "IT IS ILLEGAL TO USE ON 11 METER CB BAND" - so my guess he's had a few problems with computer memory or a server configuration error.

Due to budget cuts, his high-quality Skywave amp got trimmed down to only one Pill - with vari-caps available for tuning out reactive elements the amp tended to put in place on the antenna and feedline.

Now, he won't even participate in this NG except to flame those, like you, that are new - and he does use "Third-party" context to offset such flames.

You are not alone. But you should have some "facts" that may help you decide the issues of whom to take seriously or not. Professor does have some very valid points, but his inability to admit he is wrong or lack of ambition to work as a member of a team in this NG, does hurt his credibility.

Just so you know.

Welcome to rec.radio.cb. There is a lot to wade thru at times, but it's also a "home page" for many CB'ers out there that need to know the latest news.

Yes, Truckers hate inconsiderate 4-wheelers, but are always checking them out for pretty seat-covers.

Cursing and swearing? Well, it's prevalent, even in commercial radio and TV. You can't seem to get away from it these days. But that doesn't mean that you have to lower yourself to their level, stick to your guns. You might find friends on the radio that will listen to you more than a drunkard that has had a little [way?] too much to drink.

The only way you're going to get any useful information, is to ask. There simply has not been much questions lately - others are too busy.

We'll keep an ear out for you.

On Sun, 07 Jan 2001 12:47:49 GMT, while the modem was ice fishing with
the Mouse, Professor <bgriffey@my-deja.com> dissertated the following:

:+> Tim,
:+> Get used to it... This is the way this group has been for three years.
:+> It gets worse all the time. You will get no useful information here.
:+> This is a place to come and fight when your radio is unavailable.

Let me give you an example of just that. Four men, charged with multiple homicide, positively identified, and one has confessed to the crime. According to the attorneys for them, however, since they have not been proven guilty, they have the right to go free and pursue any activities they wish.

Not true at all, Tim. Yes, the group has it's problems and idiots, just ignore the ones who you are absolutely certain are trolls. I have learned much from a few in this group, and met alot of cool folks that don't have their nose in the wind. The ones who profess to know what this group is all about and feel free to speak for the group, well, it don' take a rocket scientist to figure out those who have nothing better to do and want it like "the good ol' days". Well, these folks forget, these are THE GOOD OL" DAYS for some, and if you don't fit their molded clique of "who" or "what" the group is SUPPOSED to be about, these types are going to whine and do their best to discourage you. Just like any other place, weed through the trash to find the treasue. Welcome and hope to catch ya' in DX land, Tim!

Gee, I'm scared to death. I can hardly stand the fear, whatever will I do. I guess I'll just hang out in Vegas and pretend your nothing but a CB Rambo hoping to work your way up to a full time bullshit artist. Fuck You pal, not very professional, but those that know me know why think your so hilarious.You would be better off screwing with someone who actually gave a damn, either way, come see me anytime big man.

I fear no man, and I bow to no fools, as it is my way.

And I do plan to retire by thirty, is that early?

Maybe some day you can have a life without fear too, but first you'll have to work past the fear of having a life that has lead to your current existance. Don't cry Joe Bob, it'll get better. Quit dating relatives, get a hair cut, get a job, and try to enjoy life.

The Main Man at EEI said that.....

This is hardly a humorous situation, because I certainly would not want to be the one losing $300 to a jerk, BUT.....
1. the guy is trying to sell snake oil in the form of '10 meter radios' that actually operate on 11 meters. You are here in the CB group complaining instead of over in the amateur groups complaining about this idiot, and no self respecting amateur would use this radio for 10 meters anyway.
2. the 'CEO' is knowingly in the business of selling questionable equipment, and he is presuming that you know that, so he figures that all bets are off----two people doing something under the table. Which government agency are you going to complain to? You have both participated in a questionable transaction.
3. ultimately, had you genuinely wanted a 10 meter radio, you could have picked up a real one at Radio Shack, or an HF transceiver for more money, but it would work, and it would have a warranty from the manufacturer, and the manufacturer would have an address, and a phone, and a name of someone to talk to.
4. finally, let the buyer beware. It sounds like Express Electronics might be a mom 'n pop operation working out of someone's garage, but it would be interesting for someone in his neck of the woods to cruise by and see what sort of facility is operating. Some guys like this do nothing but take orders and then order the merchandise after the fact, maintaining no stock at all. Very possible he had no replacement for this bad radio anyway.

Ignore n8wwm and Boobner. When they are not on
channel 19 keying on people they are out here trying
to force their issues.

P.S. The issue is disguised as illegal operation, but it is actually
just an attempt to irritate and thus gain attention. Attention that
these two can't get by any other means.

Hehehe..had me laughing out loud with that post, Martin. I haven't been to speedtrap yet, but I have an idea what it's going to be. Had a buddy back in the eighties who got tangled up in some serious blue down Jennings way. Took a long time and a lotta $$$ to the local constabularies to get it washed away.
Also have a few o' them there infamous speed trap towns here in the 'pile. Most all drivers are aware of "Waldo Willy" in Waldo, on US 301, and it's neighbor, Lawtey. I seen some real ugly stuff go down there. Serious s*#@ that you wouldn't think could happen in todays society, but does, and on a regular basis. All revenue (like upward of eighty percent) from these towns were coming through traffic infraction citations, arrests, fines, and forfeitures.
I been through the alley (I-10) many a times and you'll see more cops concentrated in La. on that stretch of I-10 than the entire drive coast to coast on 10. Thought I'd slide through one year in the middle of the night (about 2:30 AM) and avoid the BS (Lotsa construction at the time) I knew I'd encounter after the state line. Cops every where and before I was inside the state barely a minute, those blues were flashing in my rear view. Had my license already in hand and he was like "where ya' going?". Now I had Fla. tags and was headed East, and I replied I was going back home. He shined a light in my eyes, then to my license, and as he handed it to me, he actually stated "we don't like Floridians here, always taking drugs back and forth to Texas". I again replied we were heading east. He said "we're jes' checkin'" and as he was walking back to his car, I looked at my wife and we both stifled a laugh. I was unsure if I was to sit still, or what, for a second, and he roared off and disappeared as quickly as he appeared. Didn't have time to run my tags through, just a quick, courteous, "Welcome to Lweezanna." kinda stop.
Yea, I gotta do some reading up and refamiliarize myself with some good 'ol Cajun country ways and cooking. Ain't been to Mardi Gras in years. Maybe a return trip is due this summer or next summer.

A dipole is not very hard - it is just two long wires or rods that are places end-to-end and fed in the center. You can even use a couple mobile whips mounted on the end of a 2x4. If you have never built an antenna before, it will probably take all of 30 minutes. I made one using a pair of 4-footers in ten minutes, although I never used it vertically.

Bolt the brackets to each side of one end of the 2x4, hook up your feedline, screw in your whips, and stick it out the window. Even if you connect it directly to 50 ohm coax you should get decent results.

Any citizen has the right to pursue any LEGAL activity they wish.
There is no law, constitutional, statutory, common, or case, that
gives anyone the _right_ to pursue any illegal activity. If there was
such a law, then that activity would be legal. Duh . . .

Hello Gremlin.
You didn't say whether or not you transmitted without the antenna.
If you just turned on the radio to see if it would power up, no problem.
If you did transmit, you may have burnt the final, maybe not.
Have you tried to get a radio check? I am assuming that you don't own a
power/swr meter. If you can, get one and see if the radio keys up.
If the radio keys up and talks, I wouldn't worry about. If it's workin it's
workin.
Worst case scenario: You cooked the final.
Any good CB shop can get you straight for just a few $.
Good luck

I have a brand new 2 tubers with 2 each 3-500Z graphite tubes which was built to be narrow banded (cuts down on bleed over)-unit has less than one hour on it - also has a key circuit built in so no foot switch nor jumper cable required $1595/firm

Also, have a very nice Blackcat JB200, recently serviced, 2 new 3-500Z graphite tubes - $895/firm

Subj: 1mangayboy
Date: 1/7/2001 7:05:51 AM Eastern Standard Time
From: megabite@bungo.com (michael stone)
To: n8wwm@aol.com

Please stop your spam war with 1mangayboy. Your posts are annoying to
everyone in the rec.radio.cb newsgroup. Perhaps, you and 1mangayboy
should get a motel room and work out your homosexual affair in privat.
you may also take your gay afair to a gay newsgroup. The cb newsgroup
is not the place for your postings. Please respect the rights of others.

Your Post:
...now obvious to all that I can make you spout profanity at will. It
is now
obvious to all that that is all you can do. it is now obvious to all
that you
are incapable of anything remotely resembling normal human conduct. It
is a
laugh to see you spouting your junk on here.
N8wwm pushes your button and you jump. Of course, you are incapable of
thinking
about that concept, due to your own obsession with me. It is extremely
funny to
watch. I encourage you to keep it up as long as you want.

Also, clinging to the wishful thinking that I am Voobner, deadbeard,
Professor,
Sparky, etc. avails you nothing. It only proves the delusional aspects
of your
personality to an even greater degree.

I laugh in your face, but I am still kind enough to refer you to the
information below, so that you can hopefully gain the perspective that
will
enable your thinking to the point that you decide to undergo a species
change
operation and become a human being. Doubtful. LOL

Part 95- FCC rules, amended to Communications act of 1934, prohibit
communications beyond 153 miles, a power level exceeding 4 watts AM, 12 watts
SSB. Use of non type accepted equipment and transmissions out of band are also
prohibited.

Yep, unfortunately you are right. It is up to the GOOD people on this newsgroup to keep up the good stuff & ignore or KEY OVER (Delete) the bad stuff & potty mouths. That's what I tell everyone on the CB--IF you KEY OVER the filthy mouths, then you don't hear it and maybe someone else don't hear them either. That guy that had a post about putting the bozos in a "Kill" file (or a hate file for you liberals) will make it a different looking group. They is the same thing as Keying Over on the CB the trash!!!!! Trash--REPENT before it's too late!!
Dave!!!!!!!!!!!!!!!!!!

"Tim" <tdt@sccoast.net> wrote in message
news:3A5857E3.BE7AA141@sccoast.net...
Hello All.
Just a little observation from a new subscriber. All the flame wars make this almost seem like I have my CB on. Are we not supposed to help each other out here? I just recently started getting back into CB, and have made a few observations while on the air. Truck drivers hate 4 wheelers. I guess they drive those trucks everywhere and don't own cars. They also own channel 19. I don't know when they bought it, but o' well.
The few people still on the air are for the most part, a good bunch, but the few A'holes ruin it for everyone. It seems like the people who have the most time on their hands and could promote the hobby are the ones who deadkey, make noises, sing, cuss, and every thing else BUT communicate.
And why the fuss over illegal CBs? That's been done on every radio band since Marconi. I used to run 45 watts, which was enough to get me out of the rural area I was in. I knew people who ran 1000+ watts, but figured if they had the money, more power to them.(pun intended)
And as for the Hams. I listen to 2 meter on my scanner. They are more polite and professional, but still have no tolerance for CBers. Just having a license to do your thing is no reason to be so pompous. I used to have a license for my CB. Now you don't need one. If the Hams keep making fuss, the next step is a no-license license. 2 meter is probably headed that way now. I remember an old guy taking me in his "shack" when I was growing up and working Mexico. He and his friends were all supportive of anyone interested in the radio hobby. As I get back into this, I'm finding that Hams tend to be stand-offish, like they're guarding some big secret. I mean no disrespect, but I don't know if I would want to be a Ham today. I don't fit in in their secret society. I guess I'll just fire up the ol' CB and talk to whomever is available, amid all the cussing, whistling, singing, farting and whatever else.
And please, help make this a better group. Don't dignify the trolls with a response.
Thanks for hearing me out.

Tim

We can take action *only* upon probable cause. The presence of a CB antenna
doesnt quite fullfill the probable cause test.

> From your post (Wooo-Hooo!),
>you sound a little too eager, which is one of the reasons I am not much
>in support of local enforcement.

Read on.....

> It's only a hunch, and I don't have
>facts to support it, but I am afraid this will cause problems for inno-
>cent CBers due to mistaken identity. I don't, of course know your own
>qualifications as to electronics, but *most* LEOs just don't have the
>expertise to DF and/or operate a spectrum analyzer to nail down an of-
>fending signal.

For the type of enforcement action we would take, we dont need a engineering
degree. For example, lets take the "Ba, Ba, Booyeee" scenario I described
in my previous post. As a patrol officer, I hear this idiot start his crap.
I observe the RF meter on the CB in my squad car and watch as the signal
increases in strength. When it peaks the meter, I take the old fashioned
route of unscrewing the coaxial cable from the back of the CB. I continue
to watch until it is peaking the meter again. Then I look around and....lo
and behold....there is a guy two lanes over holding a mike up to his mouth
and saying "Ba, Ba, Booey" over and over again. Now, I have probable cause
to believe that *he* is the person that is violating the ordinance. See, I
didnt even have to attend IIT to figure that one out.

> I would caution LEOs that to begin "busting" CBers
>without definite cause could generate lawsuits against cities, counties,
>and states with the charging officers being named as co-defendants.

Lawsuits are nothing new to us.

> Also
>bear in mind that under the Federal law, licensed stations, such as Ama-
>teur and commercial, are EXEMPT from such local enforcement. Any ques-
>tions that arise from the operation of such stations MUST be referred to
>FCC. LEOS can NOT touch them!

Hams dont do this type of stupid stuff. But, if one did.....

> Once a license is produced a LEO MUST
>back off and refer the matter to the Feds.

Along with a detailed case report, and then the operator can kiss his
license goodbye.

> Again, to pursue" enforce-
>ment" against a licensed station places an officer outside his juris-
>diction and *can* subject him to legal action.

Once again, lawsuits are nothing new to us.

> I could see some "rambo"
>cops interpreting the operator attempting to show his license as "con-
>tempt" of cop and causing the licensed operator to have to appear in
>court to prove his operating authority and the invalidity of the action.

Hmmmm....are you sure you dont post in alt.le under an alias? Tom Alciere,
perhaps?

>Again, can you say LAWSUIT?

Can you say TROLL?

> I know I would slap a suit against the
>cop/local authorities so fast, it'd make their heads swim!

Cool....under our state law, costs are assessed to persons filing frivilous
lawsuits. How much money are you perpared to spend? ;-)

Greetings!

Do you have a local CB shop? You can take it there and ask them if the radio is still working.

If not, I hope you have been able to locate an antenna for it.

If you put the antenna together correctly, you should be able to transmit on the radio.

Look at the "S/RF" Meter, if the needle moves to a spot on the meter and swishes back and forth as you talk, you're ok.

I am aware of radios, especially used ones, that have seen considerable abuse and can't take the type of abuse you put yours thru. They "quit" on the spot.

Sometimes, even a brand new radio can fail too. So, if the radio is new, take it back to the shop for them to check it out for you. The cost should be minimal - if any.

While you are there at the shop, inquire about "Dummy loads", they are designed to help you check out a radio without worrying about what could happen.

If you can purchase one, please do so, and don't forget to put it on the antenna connector jack at the back of the radio when you try things like this. This way, the radio can survive with no problems when you want to fiddle with it.

If you're good with a soldering iron, you can make one yourself - but have the shop check to see if the radio works, they have things like antennas and dummy loads for that purpose.

Makes sense to me, and perhaps I should let the Village Prosecutor contact
the FCC with the inquiry.

I have been an avid CBer for a number of years. There are only two of us on
our entire department that actually turn on the CBs in our squad cars, the
rest of the troops dont want to hear the usual crap on Channel 19 and dont
realize or care about what Channel 9 is for.

>
>Sparky, FLRC

It started out that the moron that installed the radios in the harvesters hooked up the power leads backwards (on all the harvesters), so I had a lot of rectifiers to replace. When I got around to the one with the dead porcupine, there were just a bunch of farmers standing around trying to figure out how to get the thing out of the chute. So I just bent a hook on the whip and fished it out. I don't like to say anything bad about farmers, but maybe there is something to the term "pea-brain".

"JR" <jr@some.net> wrote in message news:3A50E33A.33E5D18E@some.net...
I don't have to test the theory, all I have to do is listen to the idiots using
these modded radios with "lotsa swang" and hear the distortion and splatter. These radios would sound a lot better if they had some chocolate and vanilla poured in them. There is no advantage of making a radio swing over having a radio that fully modulates the dead key carrier. The only thing it does is make
meters swing which seems to really make cbers get their cookies off. But the cbers have fully trashed 11 meters already, so adding another modded distorting,
splattering radio isn't going to make much difference.

HOOOOOOOT!

Captain, your ENTIRE Troll-act is/was about personally attacking ME.

You have, from the start, used ME as the butt of your humor (Remember your funny little "dice rolling" scenario?)

Now that the tables are turned (and you're TOTALLY OUTCLASSED) you cry "foul".

I'd have paid MONEY to have seen your face when you read my "1-800-CAPTAIN*OF*ILLEGALS" ad, or my "Captain Abandons Ship" skit.

OH MY GOD YOU'VE GONE FROM A CAREFREE TROLL TO A PRIGGISH, EGOTISTICAL HYPOCRITE IN THE BLINK OF AN EYE!

But I'm laughing too hard at you to be *really* angry.

HOOOT!

No, Cap, you'll never see floods or profanity for profanity's sake from me (as is your practice). But I AM planning a rock opera ridiculing you and your "defender of ilegals" posturing.

1214. Introduction to FRS. It's Different From 11 Meters.

Newsgroup: rec.radio.cb
Date: 2001-01-07 18:32:09 UTC
From: k5pf@aol.comPaul
Message-ID: <20010107133209.01942.00000252@ng-xb1.aol.com>
Source record: 67264

There is a natural tendency for folks familiar with 11 Meters to assume that FRS is just another Citizens Band. Both are license free and intended for personal communication purposes. However, that's where the similarity ends.

UHF is line-of-sight (or very short range, if there are obstructions). There is no skip.

FRS cannot have antenna connectors on the radio. The antenna must be permanently attached.

Unlike CB, FRS stations are allowed to communicate with licensed stations from the GMRS on FRS channels 1-7. (CB is not allowed to communicate with other radio services).

FRS often is used for business purposes, in addition to being a personal "intercom" among families. There is almost zero "hobby" operation.

Unlike CB, FRS does not have a specific wattage limitation. The standard demanded by the FCC is .5 watt Effective Radiated Power. (Thus designers must take into account both the transmitter power and the type of antenna, rather than depending upon wattage, alone).

Unlike CB, users of FRS transceivers are seldom interested in communications with strangers. They prefer to talk with members of their own group and are offended if someone tries to "break" the conversation. Many use CTCSS (or privacy codes) to ensure that they don't hear other traffic on the same channel. A few use scrambled transmissions--one model radio offers multiple scramble modes. It sounds like sideband without the BFO. The bottom line is that even if you can hear conversations, the other stations may not hear you calling them.

Yesterday, someone wrote:
<FRS-This was made to open the contest to the growing FRS community.
<Again, it is based on contacts -since there is a required 2 mile distance
<limit based on wattage (unless you have the 3 mile Radio Shack mobile
<FRS).

Just to clarify the situation, there are no distance restrictions on FRS. What you are seeing (2 miles & 3 miles) are the potential communication distances under *ideal* conditions, using two different radio configurations. Normal ranges are 3/4 mile for car to car using handhelds. With the Radio Shack mobile, you can double that, with gusts up to 4 miles.

FRS can be very useful and a lot of fun if you approach it with realistic expectations. Otherwise, you may be confused by what you hear or disappointed with the range.

> <aaronvoobner@my-deja.com> writes:
>
> >From now on.
>
> Why???
> What changed your mind?

Honestly? I saw a recent post where Sparky actually dared to SASS BACK
to his (pro-illegal CB) attacker. And then I got a couple of emails from
newsgroup "regulars" telling me to keep up the good work because they
were fed up with the illegal focus of the group.

I figured "hey, this NO RESPECT FOR ILLEGALS thing is catching on".
After that, I decided (especially after the unprovoked cruelty and
rudeness shown to me on this NG) that I wouldn't hold back any longer.
I'd call a spade a spade. If you support illegal CB, I don't support
you. Simple as that.

Oh I don't expect to win any popularity contests. Showboating for the
crowd is what the "Captain"s Troll-Act is all about. But now that I
know "The Captain" folds up when given a taste of his own medicine, he
won't be much of a problem.

Hey, I KNOW that 90% of the people in this newsgroup are anti-LEGAL-CB
and therefore anti-Voobner. But there *is* that little minority of 10%
out there who DO deserve a voice.

Gremlin,
I guess no one needs to tell you that operating a radio with no antenna is a bad idea. the easiest way to tell if you've done any harm to your radio is to try it with an antenna. If it works, you 'got lucky', and no problem. If it doesn't work... oh well. I hope there's no problem.
'Doc
PS - It's usually 'all or nothing'. If it works there was no harm done.

Hello Jlspas: Yes mounting and installing a 5/8 wavelength ground plane antenna isn't the easiest task, Ten-4.

I know Radio Shack, and some Home Improvement Stores have push up masts. Lowels has a good 30 foot push-up mast for around 35 dollars made by Channel Master. You won't get all 30 feet to push up, but it will be very close.

May I suggest:

Install the push up mast, after you have verified that it will easily extend and retract ok, don't want to fight the thing while on the roof. Keep your beer intake to absolute minimum during installation. And do not install the mast and antenna near power lines, it simply ain't worth killing people and setting the house on fire of both.

The base of the push up mast must be installed first, Radio Shack carriers a base support piece that works well. The trick here is to install (long 3 to 4 inch wood screws, driven in with a battery operated drill, going into the 2 X 6's supporting the roofing material. A stud finder works for me, locating the 2 X 6 in the roof.) Base support piece with roof repair mastic or equivalent goop type roof repair stuff, so that the roof doesn't leak. I squash some of the black goo down the holes for the screws to make sure its water tight, never had a water leak problem doing it this way. Once the base support piece is mounted, installing the goo on the roof side and the support side, is recommended.

Next you need to install eye let hooks that will screw into the roof, that will support the push up mast with the guy wire. Need to go into the 2 x 6 again, and use the roof repair goo to insure that the eye let hooks won't leak either.

Install the push up mast into the base support piece, while a second guy attaches the guy wires to the mast. Raise the mast up vertical to that is is plumb or vertical straight up and down. The second guy then attaches the guy wire to the eye let hooks, so that the first ten foot section is straight up and down, and supported by 3 or 4 guy wires.

I use a 10 foot step ladder to then install the antenna on the push up mast, without the ground plane radials, this makes it a breeze to install. But with the ground radials attached, you will look like the three stooges up there on the roof. Then simply install the 4 ground plane radials after the antenna is mounted to the push up mast. Connect the coax.

Then raise the antenna up allowing for around a foot or a foot and a half of the mast staying inside of the next larger size for safety. Some push up masts have a red line marking the maximum length to be used.

Install guy wires for every 10 feet of push up mast. You want to set in your CB'in chair consuming mass quantities, not worrying about the winds or weather, right! I figure a few extra dollars and an hour or so to bullet proof the antenna installation is well worth it.

The MaCo V5/8 ground plane antenna will not tune SWR dead nuts of 1 to 1 on the CB Band (This is just the way the antenna is built) You will see a 1 to 1 SWR below channel 1 if you have a antenna analyser, like a MFJ-259B. Make sure the tuning ring has a 1 inch spacing between the bottom turn and the top turn, as the assembly instruction say. I have installed a piece of Dilrin or Plastic to maintain this distance. Keep on eye on birds landing on the tuning ring and messing it up. The 1 inch spacer that is installed to maintain the 1 inch spacing is well worth the time and trouble to install it.

Keep the power down to below a few KW, If you don't believe me I can send you some "Blown Up" Pictures of the Maco V5/8 and the MaCo 5000 high power version of the MaCo V5/8, "Blown up".

Don't forget to ground the base of the antenna to the house ground pipe.

Hope this helps.

Jay in the Mojave

Ahhh...that's cool...I was thinking that I was the only one getting email
supporting my stance.
I refer Illegals to the information below:

Have a nice day

Part 95- FCC rules, amended to Communications act of 1934, prohibit
communications beyond 153 miles, a power level exceeding 4 watts AM, 12 watts
SSB. Use of non type accepted equipment and transmissions out of band are also
prohibited.

Hi Lenny,

There's a lot of people in rec.radio.cb who accuse cops of corruption
and say they KNOW cops will do this or that if empowered to enforce CB
laws by local legislation. But when confronted with a REAL LIVE cop's
opinion, they just can't handle it.

Forgive me, but I think your EXCELLENT and truthful response to Jerry's
defense of illegal CB deserves a re-post (and a re-read) by ALL.

Sincerely,
Aaron H. Voobner

Jerry Oxendine wrote in message <3A54C198.5003@bellsouth.net>...

>I am not sure whether it would be OK to just go around "busting" CBers
>simply because you see an antenna on a house or car. That would not be
>sufficient evidence of illegal activity.

We can take action *only* upon probable cause. The presence of a CB
antenna
doesnt quite fullfill the probable cause test.

> From your post (Wooo-Hooo!),
>you sound a little too eager, which is one of the reasons I am not much
>in support of local enforcement.

Read on.....

> It's only a hunch, and I don't have
>facts to support it, but I am afraid this will cause problems for inno-
>cent CBers due to mistaken identity. I don't, of course know your own
>qualifications as to electronics, but *most* LEOs just don't have the
>expertise to DF and/or operate a spectrum analyzer to nail down an of-
>fending signal.

For the type of enforcement action we would take, we dont need a
engineering
degree. For example, lets take the "Ba, Ba, Booyeee" scenario I
described

in my previous post. As a patrol officer, I hear this idiot start his
crap.
I observe the RF meter on the CB in my squad car and watch as the signal
increases in strength. When it peaks the meter, I take the old
fashioned
route of unscrewing the coaxial cable from the back of the CB. I
continue
to watch until it is peaking the meter again. Then I look around
and....lo
and behold....there is a guy two lanes over holding a mike up to his
mouth
and saying "Ba, Ba, Booey" over and over again. Now, I have probable
cause
to believe that *he* is the person that is violating the ordinance.
See, I
didnt even have to attend IIT to figure that one out.

> I would caution LEOs that to begin "busting" CBers
>without definite cause could generate lawsuits against cities,
counties,
>and states with the charging officers being named as co-defendants.

Lawsuits are nothing new to us.

> Also
>bear in mind that under the Federal law, licensed stations, such as
Ama-
>teur and commercial, are EXEMPT from such local enforcement. Any ques-
>tions that arise from the operation of such stations MUST be referred
to
>FCC. LEOS can NOT touch them!

Hams dont do this type of stupid stuff. But, if one did.....

> Once a license is produced a LEO MUST
>back off and refer the matter to the Feds.

Along with a detailed case report, and then the operator can kiss his
license goodbye.

> Again, to pursue" enforce-
>ment" against a licensed station places an officer outside his juris-
>diction and *can* subject him to legal action.

Once again, lawsuits are nothing new to us.

> I could see some "rambo"
>cops interpreting the operator attempting to show his license as "con-
>tempt" of cop and causing the licensed operator to have to appear in
>court to prove his operating authority and the invalidity of the
action.

Hmmmm....are you sure you dont post in alt.le under an alias? Tom Alciere,
perhaps?

>Again, can you say LAWSUIT?

Can you say TROLL?

> I know I would slap a suit against the
>cop/local authorities so fast, it'd make their heads swim!

Cool....under our state law, costs are assessed to persons filing frivilous
lawsuits. How much money are you perpared to spend?

Listening to him, reading things written about him by acquaintances, and looking at his record. I do not bald assertions. The man just is not a smart, savvy person. He may have a certain cunning about him, but then, so does a weasle.

listening to
> the news media again, my friend? or is it that you just wish things
> are so . whatever, the boy knows what he is doing.

The people that his father has surrounded him with know what they are doing and of that I am glad.

let's see if he can
> handle the heat in the kitchen, before we begin our personal attacks,
> what do you think?

I made no personal attack, IMO. It was meant as a light comedic response. It may have fell flat... Oh well...

i mean the guy graduated from yale and harvard. do
> such educational accomplishments, in and of themselves, in any small
> way, indicate a lack of grey matter???

Dude, he was a "Legacy". He got C's in a pretty lightweight schedule. I wasn't impressed, especially since being a legacy, he took someone else's, possibly more deserving, spot.

i think not. it is a pleasing to
> me to have a guy in there that has been educated in the best schools in
> this nation but at the same time will stop and have a beer with the
> working man and will not try and beat you over the head with his
> superior intellect, which is more than i can say for some of these
> hamster smart guy wantabees,...cd is out......

Interesting. If we're to believe Bush, he hasn't drunk anything since the 70's, even though he was caught on video tape at a buddies wedding reception drunk off his ass, well beyond his stated sobriety date. I would have been much happier if McCain had beaten him in the Primaries. As it was, I didn't vote for Bush *or* Gore. I voted Libertarian. That being said, I don't think he'll do any real damage 'cause of the people surrounding him. I just wish he'd stop lying about everything and ignoring the obvious, which is he has no mandate from the "People" as he likes to say, and his tax relief program has no chance of making it into reality. His pleas for bipartisanship are falling on unbelieving ears, especially when he hosts a get together of Governors and doesn't include any from competing parties.

I like you, cd. I don't like Bush and I don't plan on changing my mind about either, anytime soon. Commode...commode...

$1@nnrp1.deja.com...

> Honestly? I saw a recent post where Sparky actually dared to SASS BACK
> to his (pro-illegal CB) attacker.

Sparky, as a real contributor to the group, has the good sense to make his
point and leave it made instead of just chasing everyone around as you seem to
want to do. I have no problem with an opinion well spoken, but idiot harassment
and accusations like YOU are wont to do will NOT be tolerated. YOU ARE A MENACE
TO LEGAL DISCUSSION!!

> I figured "hey, this NO RESPECT FOR ILLEGALS thing is catching on".

Yeah, but WHERE are your ILLEGALS? YOU HAVE NO PROOF!!
BLAMMO!! There goes your disrespect of everyone...

> After that, I decided (especially after the unprovoked cruelty and
> rudeness shown to me on this NG)

I'd say YOUR CAMPAIGN OF ACCUSATIONS and HARASSMENT WITH NO PROOF WHATSOEVER
would be LIBELOUS and MALICIOUS, and thus your treatment was PROVOKED. WAY, WAY
PROVOKED. Your calling it "cruelty" indicates that you have been BEATEN DOWN
RIGHTEOUSLY.

> that I wouldn't hold back any longer.
> I'd call a spade a spade. If you support illegal CB, I don't support
> you. Simple as that.

Trouble is, you fail to realize that what YOU support and don't support is OF
NO INTEREST TO ANYONE if you're just going to be a JACKASS about it ALL THE
TIME.

> Oh I don't expect to win any popularity contests.

Glad to hear that. Another rare example of lucidity!

> Showboating for the
> crowd is what the "Captain"s Troll-Act is all about.

Actually, SPANKING AN IDIOT TROLL for the crowd is what my flame act's all
about. It's ONE HELL of an act, dontcha think? `,)

> But now that I
> know "The Captain" folds up when given a taste of his own medicine, he
> won't be much of a problem.

Folding up? That's YOUR TRICK, sonny. You wouldn't need to make so much of this
stuff up if you were *winning*, would you?

> Hey, I KNOW that 90% of the people in this newsgroup are anti-LEGAL-CB

You do? That's a LIE!! You're BUSTED IN A LIE AGAIN!! YOU DON'T KNOW ANYTHING ABOUT WHAT PEOPLE DO OFF THE GROUP!!

> and therefore anti-Voobner.

Face it, Boobtard.. The ENTIRE GROUP probably doesn't enjoy your paranoid ravings and accusations. You may have a malcontent here and there who like to see random evils such as yourself visited on the group, but that's more of a comment on YOU and THEM, isn't it?

> But there *is* that little minority of 10%
> out there who DO deserve a voice.

I don't hear them calling for YOU to be that voice, LOONEY!! If YOU do, I'd like to recommend a PROFESSIONAL for you to visit who may be able to prescribe you the THORAZINE you seem to need so badly!

******,

On 01/07/2001, Voobner dribbled.....

I'll briefly summarize the major defect of this proposal: which is
that a
government-sanctioned hobby radio service designed to be available to
all citizens such as you
propose - already exists - and it is called Amateur Radio.

No one in this proposal, least of all Alan Dixon, is asking
for a government-sanctioned hobby radio service. The only thing
the proposal asks is that cb operators not be criminalized by
some stupidly written law that does not give any consideration
whatsoever to the fact that the 11 meter band is grossly unfit to
support a short-range communications service of any type whatsoever,
due mostly to the fact that certain and varied characteristics
of the solar environment make it impossible to prevent the
transmission and reception of signals over distances far and
above the limit spelled out in part 95., even at FCC Type-Accepted
power levels! At the inception of cb radio serious consideration was
being given to a slice of frequencies between 420 - 450 mhz but the
idea was ultimately trashed due to the bulkiness and the prohibitive
costs regarding equipment of the period. If any part of the spectrum
had any chance whatsoever to fulfill the requirements of a short-range
communications service it was this slice of spectrum that would
have done the job. No surprise to some of us though.

So there's your short-range communications service. 27 mhz.
never had a chance of being that. Having worked stations at some
14,000 miles distant with 12 watts/ssb has already proven that
to me. The ability of signals at these frequencies to travel
great distances via skywave propagation was pretty much a given
when the "powers that be" decided to establish a short-range
communications service in a range of frequencies that they
knew were anything but suitable for the purpose at hand.

And if you think about it, quite a few of us have answered
an unknown station that was outside the limit according to
part 95, type-accepted equipment or not. Of those of us who have,
how many of you set well with the fact that because this was made
possible by the "characteristics of the range of frequencies"
in use and thru no fault of your own that you are now considered
to be a criminal? I would be inclined to think that the

majority of us don't much like the idea of that at all. If
I'm wrong here, let me know.

I feel for you brother, you are a delusional person who needs help. I guess you proscribe to conspiracy theories and things alike, I guess your working on that Manifesto of yours as we speak. Aaron H. McVay you should be named. While your work is in vane and you claim victory for your self while posting excerpts regarding illegal CB activity, you sir can take no glory for your self but ride the band wagon. While you rob precious time that you could be spending with your family(if your really have one), you waste it here on this group. But why do you do this, your EGO..... Your ego will not allow CBer that you so much despise and like to generalize to say the least, to match wits with the almighty Voobner(if there is really such a person). Then your paranoia and ego cannot handle this reality and therefore must insist that SCD is a hired assassin to do battle with you, please.....Get a grip. While you claim to be here for the good of exposing criminals you exposed your self and your true intent and tactic, you are here to disrupted, divide and concur. Such a old method of contro and destruction.

At this time I would like to share something with you, CB radio is a BROTHERHOOD, just like any other circles of society. You have manage to sow your seeds of discontent for a season but will soon grow and exposed themselves in there true Light in due time. You are truly fearful of us, fearful that we may learn of your true reality and being. Continue with your efforts (mis)guided by a confused ego that mascarades behind a facade of truth and dignity. I like many others can see right through you shallow existence. Will your ego allow itself self to bow down and humble itself while reflecting on the sickness and hurt in you heart? Here comes the denial as you read these words, they are just words Arron remember that, just words.
ANSWER: In due season...All your Words, Ways, and Actions will come full circle. I tell you now and forever hold my peace that what ever comes to pass is the direct reaction of your own actions, no this is not a physical threat by me or any one else on this group, its a REALITY. I am speaking of the Natural Order of the Universe (or what ever you choose to call it), the pendulum swings and balance is reinstated. What does this mean to a microcosm like your self in the macrocosm of this grand existence? The shits coming down dude and it was all initiated by you and solely you. These words have been written in time and cannot be retracted, lets just hope they are wrong. Steadfast Arron H. Voobner, let your heart be balanced with a feather.

peace,
KRS

This is an internet usenet group! Everyone on here has a voice!
You are nothing more than a troll and a trouble making crybaby!
Please explain to me how trolling a usenet group does a damned thing for CB radio. The people who operate illegally do so at their own risk and take responsibility for their own actions. There is nothing illegal about discussing any topic. This is a free country. If you don't like what you read here, go away!

Sure, ADVERTISE AWAY, Cappy. But why advertise a CB amp unless you
intend for another person to use it? Why build or own a CB amp unless
you intend to use it?

Don't bother trotting out all the old worn-out excuses like:

*It's a doorstop
*I just like looking at the tubes/pills
*stop picking on me
*It's for emergencies
*It's not mine
*It's not illegal till I use it (later tonite)
*I gut my rights it's a free kountry

> Thank you, Sir. I appreciate your catching my error.

Hm. Gosh. I'm stuck here. Since you are an experienced professional
Troll and "flame artist", Cap'n, do you have suggestions on how I might
handle your open admission of error (above)?

a) taunts
b) obscenity
c) BWAHAHAHHA (gloating)
d) parody
e) righteous posturing

Profoundly,
Aaron H. Voobner

I agree...Even I wouldnt say you cant discuss it. I will even refer those who do not know how to be legal to the information belowL

Have a nice day

Part 95- FCC rules, amended to Communications act of 1934, prohibit communications beyond 153 miles, a power level exceeding 4 watts AM, 12 watts SSB. Use of non type accepted equipment and transmissions out of band are also prohibited.

Forgive me for being brief. I mean no disrespect, but I DO hold strong opinions on this subject.

To wit, there have been virtually NO busts of CBers specifically for "communication beyond the 150 mile limit".

The fact is that CBers are NOT being "criminalized" or persecuted by the FCC for DXing on the legal 40.

In my opinion, your proposal is a Trojan Horse designed to open the door for freebanding, amplifiers, etc. and I am glad the FCC has the sense to see through it.

(If you want DXing, why not just get an amateur license?)

In theory, a dipole in free space will have 73.3 ohms feedpoint and the folded one will be 4 times that because both current and voltage are divided; close enough to 300 for government work and large mutual insurance companies.

As a practical matter, you never get to free space below VHF and not always then. Any coupling, usually magnetic, will lower the impedance. So I tend to use 200 ohms which, of course, matches admirably to 50 ohm coax. Similarly, most practical dipoles match better to 50 than 75.

One of my more successful installations was a 40 meter tripole, of necessity about 8 feet from a rooftop which we found later reflected about 180 ohms rather than the theoretical 675. A regular one would have been about 20 ohms and loaded every roofing nail within sight. It loaded with 50 ohm cable and a coaxial balun as well.

Good question, however. Eleven meters is an interesting area in the spectrum because it takes a mixture of HF and VHF practices to make things fly.

******,

To further enhance your understanding.....

On 01/07/2001, Voobner dribbled.....
in regard to the USCBOA proposal/petition

I'll briefly summarize the major defect of this proposal: which is
that a
government-sanctioned hobby radio service designed to be available to
all citizens such as you
propose - already exists - and it is called Amateur Radio.

No one in this proposal, least of all Alan Dixon, is asking
for a government-sanctioned hobby radio service. The only thing
the proposal asks is that cb operators not be criminalized by
some stupidly written law that does not give any consideration
whatsoever to the fact that the 11 meter band is grossly unfit to
support a short-range communications service of any type whatsoever,
due mostly to the fact that certain and varied characteristics
of the solar environment make it impossible to prevent the
transmission and reception of signals over distances far and
above the limit spelled out in part 95., even at FCC Type-Accepted
power levels! At the inception of cb radio serious consideration was
being given to a slice of frequencies between 420 - 450 mhz but the
idea was ultimately trashed due to the bulkiness and the prohibitive
costs regarding equipment of the period. If any part of the spectrum
had any chance whatsoever to fulfill the requirements of a short-range
communications service it was this slice of spectrum that would
have done the job. No surprise to some of us though.

So there's your short-range communications service. 27 mhz.
never had a chance of being that. Having worked stations at some
14,000 miles distant with 12 watts/ssb has already proven that
to me. The ability of signals at these frequencies to travel
great distances via skywave propagation was pretty much a given
when the "powers that be" decided to establish a short-range
communications service in a range of frequencies that they
knew were anything but suitable for the purpose at hand.

And if you think about it, quite a few of us have answered
an unknown station that was outside the limit according to
part 95, type-accepted equipment or not. Of those of us who have,

how many of you set well with the fact that because this was made possible by the "characteristics of the range of frequencies" in use and thru no fault of your own that you are now considered to be a criminal? I would be inclined to think that the majority of us don't much like the idea of that at all. If I'm wrong here, let me know.

I take it that most of you in this forum are LEOS, so I'll propose this scenario for your perusal. It would be the same thing if they took away your vhf/uhf/800-900 mhz radios and instead re-assigned all law enforcement to the middle of the 40 meter international shortwave band. Criminals out of nothing and the checks for free. Now seriously, how many of you would still be able to perform your respective duties if the above scenario were fact?

This is what users of the citizens band radio service have been up against since its inception. But then, most of us know that government doesn't have a long track record of solving problems in the first place. In this particular case I would say that just the opposite is true.

73,
NAO911/Jack

Martin,

I just LOVE the story about the little Georgia town that was practicing "shady" methods of revenue enhancement. One day they stopped a fella who put up a little courteous objection, so Bubba took him before the judge who also happened to be his cousin. Said individual tried to defend himself against what he KNEW was a trap, but to no avail. He spent the night in jail, I believe, and paid a rather stiff (read ridiculous) fine. Turns out that the guy they "busted" was a Supreme Court Judge, or US attorney--something like that. When he got back to Washington, he brought down the US Marshals, FBI, and whoever else he could think of on that little burg! Turned those little dipsh*ts every way but loose. I saw this on 60 Minutes over 20 years ago and I never laughed so hard in my life. Served them RIGHT!

Oh man. You're gettin' all "mystical" on me, K.

Unlike your showboatin' pal SCD, I have a heart. Look. My intention is not to attack you personally (even if your gut instinct is to lash out at me). I can see that you are probably a guy who is really into radio. Great. Me too. But by busting federal laws, YOUR Karma is getting all screwed up. As an enlightened person, you should know that. Much better that you be in harmony with the Natural Order Of The Universe and go for a LEGAL ham license. Find a local ham to help you out. They're not all bad. I've met many who are decent, great guys. Don't go by what you see posted in this NG, either. Think for yourself.

Sincerely,
Aaron

Well, if you didn't transmit, no problem. If you did, well,
maybe.

MOST modern radios will 'fold back' on the high SWR but
the problem is you may still have nailed the final transistor.
Also, with no transmission line the voltage will spike but
may not be that high enough to do damage.

In any case, if you transmitted, it's not a good thing.

Hook it up to an antenna and try it. If it works, it's 'probably'
pretty much ok. If not, then you probably popped the final
RF power transistor, which shouldn't be more than maybe
$15 or $20 plus a minimal (1 hour??) labor fee. And maybe
the driver transistor. In any case, it should be a simple fix.

Even if it works, you could still have damaged the transistor,
and shortened it's life, but if it works, I'd leave it alone.

Mike

Over water is generally excellent, especially if either end can
get some elevation...

I was up on Mount Wachusett this fall for a festival (ok,
a lot of beer too!) and took the ski lift to the summit. I
was playing around up there when my daughter walked
down, so I talked to her almost the whole way.

What was interesting was I was also talking to a couple of
kids on Mt Monadnock in Jaffrey NH. But I was at 2006'
with the next highest peak within 20 miles being 1600 feet
or so, and the kids were fairly high up on Monadnock.

Just this summer there was a rescue in Washington that
made the news. An injured climber managed to call help
from some girl 137 air miles away with FRS. He was in
a crevice, and she only heard him from her back yard.

If you can see it, you don't need a lot of power to talk it.

Then again, we can see the Moon, and Mars, and ...

If you transmitted......
A few seconds... probably not.
A few MINUTES... probably.

If you were only recieving...
probably no damage.

Get a proper antenna hooked up and transmit, if your meter shows output,
you're probably OK.

You cannot find any ANY reference where I endorsed or promoted illegal radio activities. All I said was your constant flaming is doing NO good whatsoever. It is falling on deaf ears, and what I DO resent, is your "association" (self-proclaimed) with Amateur Radio. I see your activities in here as detrimental to the Amateur hobby because it creates resentment towards hams and even prevents those that *might* otherwise obtain a license from doing so.

Again, I do NOT support illegal activity, do not engage in it, and also attempt to provide help to those that need it. You won't even seen me responding to questions about amps, only those that deal with completely legal issues. But I DON'T take issue, or get involved with flames over this because it accomplishes absolutely NOTHING. Therefore, you don't see people cursing and flaming me. My approach is more subtle. By responding impartially and accurately, I hope to show people that all hams are not stuck-up snoots, the hobby IS alive and viable, and that there is a place for serious radio hobbiests within its ranks.

Riley Hollingsworth. Yes I know him, have met him, talked with him. We are not *close* friends, but we know who each other is on sight. He is well known in my area because he is a native. Home town? Rock Hill, SC. Why did I bring that up? Because you were attempting to increase your credibility and "Threat potential" with "association" with FCC. What you have is the same email I do: rholling@fcc.gov or fccham@fcc.gov Anybody can post "data" or other info they want to to that address, and they are as likely to get a reply as you are. I have also QSO'd with him on 75 meters. So your, "threats", "secret" agent stuff, and posturing is doing no good. Other than that, my "contacts" with the Commission will remain confidential (SHHHH! The James Bond theme is starting)

You are most certainly entitled to your opinion, but look at what your posts have achieved. Do you *REALLY* believe that your one-man crusade is doing any good? Do you think that your posts are single-handedly causing the CB "sinners" to "repent". I and 50 others could join you in this crusade, as far as this newsgroup is concerned, and nothing will change. THAT is all I have said on the few occasions I have responded. I can disagree with anyone on this board because I know how to disagree in an agreeable manner. And by doing so in a respectful way, perhaps I might be more successful in whatever idea I am trying to promote.

Arron illegal activity has existed since the beginning of time and shall continue to exist. You can not change that by forcing your will upon others. Why don't you be a friend and educate others as to why they should discontinue with there wrong doing. You cant even represent those that you advocate because you your self are very new to this. Lets see that heart of yours Arron and stop this nonsense, can you? Do you think by pissin people off you and telling them " I told you so" every other minute that they will change there ways? For every action there is a equal and opposite reaction, and your method of madness causes people to retaliate with the same time of nonsense. There are Hams on this group who disagree with CBers running power but don't come out on a CB FORUM ramping and raving on how they should stop. They befriend CBers and share with them as to the benifits of Amateur operation, for those Hams I do respect. You can call it mystical, esoteric, or whatever you want to call it, Arron you KNOW exactly what I am speaking off don't play dumb, and if you have a Heart like you claim then what I am telling you should hit home with a certain amount of conviction. STOP taking all this personal and discontinue with this silly vendetta, you owe your family more then this(taking time away from them). Time is being wasted that could be spent doing things more productive, we oly have one life. Arron I have made a choice to stay with CB, this is where I enjoy my hobby, legal or not legal its just that simple. You are not responsible for trying to clean up the spectrum, and if you are then you should identify your self with credentials. I am sorry that you have had encounters with undesirable CBers that has left you with a distaste for us but, people are people Arron where ever you go. If you think being a Ham is some honorable thing you are wrong. There is no school, test, or piece of paper that will give you that. It has to come from within. So keep continuing with trying to duped people into believing in you cause ,but some of can see right through your masquerade. I am sorry if you feel as people are lashing out at you. You must understand where the root of this feeling is coming from, its deep Arron, and only you can deal with it. I know its a hard thing to confront because the ego will not allow it, especially when you have built it up in front of so many to witness. All I can tell you is, even after humiliation, exposure, if you humble your self you will have freedom that will be well worth the embarrassment of a few CBers. The ego you fuel now will never give you the satisfaction that you are looking for, "Don't go by what you see posted in this NG, either. Think for yourself". Can you listen to your own words Arron?

Cross-posted to: alt.law-enforcement,rec.radio.cb

******,

Gee Jerry, I could have sworn that you were defending
"innocent cbers and amateur radio operators". And I have
one other question.... How can anyone presume an operator
is operating illegally unless the equipment can be inspected
and checked for type acceptance? True, there may be some
instances where this information is not required to determine
whether any foul has been committed, however I can see where
this will be the exception and not the rule. This is part and
parcel of the necessary operator/station identification required
prior to the issuance of charges. The states are being given
the right to enforce FCC rules and regulations, not "make up
their own"! BTW, have any of you even considered as to how
federal wiretap laws figure into all of this? If this doesn't
get some of you to digging nothing will.

Jerry wrote to Lenny........

Lenny,

Once a local statute is passed, a LEO *may* investigate interference
complaints, for example,
from a church whose PA is being swamped by CB transmissions, or a
person whose TV is
suffering from interference. I am not sure whether it would be OK to
just go around "busting"
CBers simply because you see an antenna on a house or car. That would
not be sufficient
evidence of illegal activity. From your post (Wooo-Hooo!), you sound a
little too eager, which is
one of the reasons I am not much in support of local enforcement. It's
only a hunch, and I don't
have facts to support it, but I am afraid this will cause problems for
inno- cent CBers due to
mistaken identity. I don't, of course know your own qualifications as
to electronics, but *most*
LEOs just don't have the expertise to DF and/or operate a spectrum
analyzer to nail down an of-
fending signal. I would caution LEOs that to begin "busting" CBers
without definite cause could
generate lawsuits against cities, counties, and states with the
charging officers being named as
co-defendants. Also bear in mind that under the Federal law, licensed

stations, such as Ama- teur
and commercial, are EXEMPT from such local enforcement. Any ques-
tions that arise from the
operation of such stations MUST be referred to FCC. LEOS can NOT touch
them! Once a
license is produced a LEO MUST back off and refer the matter to the
Feds. Again, to pursue"
enforce- ment" against a licensed station places an officer outside his
juris- diction and *can*
subject him to legal action. I could see some "rambo" cops
interpreting the operator attempting to
show his license as "con- tempt" of cop and causing the licensed
operator to have to appear in
court to prove his operating authority and the invalidity of the
action. Again, can you say
LAWSUIT? I know I would slap a suit against the cop/local authorities
so fast, it'd make their
heads swim!

Correct me if I'm wrong here.

Jack

CBers note the information below: DO NOT BUY THESE AMPLIFIERS!!!
They can get you in trouble with the FCC.
They are ILLEGAL.
Have a nice day

Part 95- FCC rules, amended to Communications act of 1934, prohibit communications beyond 153 miles, a power level exceeding 4 watts AM, 12 watts SSB. Use of non type accepted equipment and transmissions out of band are also prohibited.

I have no doubt, Mike, some of that sounds like good fun to try. I have heard of results that mimic that of what you experienced, I just haven't had the time to experiment with them like I would like to. On the boat, due to the open water, as you say, we get great results. But I can usually count on around two miles on land for AVERAGE use.

>Please explain to me how trolling a usenet group does a damned thing for CB
>radio.

It offends the keyklowns, hopefully to the point that most of them
will eventually get tired of this group and go away. That will open up
the NG for discussing the intended topic of CB radio. It is not
intended for self-gratuitous ramblings about kilowatt sparrow-cookers,
or for the promotion of illegal activities (which, in and of itself,
is illegal), or for the advertisement and sales of contraband (which
also is illegal). CB radio is about radio communication, not keydown
circle-jerks or playing "king of the airwaves".

There are tens of thousands of newsgroups. Those that wish to deviate
away from the intended purpose of CB radio can also deviate away from
this newsgroup.

> The people who operate illegally do so at their own risk and take
>responsibility for their own actions.

Bullshit. There is nothing responsible about operating illegally. They
don't willingly compensate for damages from the nuisance they cause.
If they make any attempt to minimize the nuisance it is only from fear
of getting caught. Illegal operation is done irrespective of the law
and the law's intended purpose.

Then there are the excuses used to justify their operation. Such as,
"because I can", "because I have the right", and my personal favorite,
"there are worse crimes". If that were a valid argument, it would mean
that all arson investigations should be shelved until all murders have
been solved. Making excuses is not being responsible.

And when that doesn't work, they whine about anyone that stands up for
their rights, and call them trolls. Or they threaten them with
violence. In other words, when all else fails, the show their true
nature by practicing the primitive mentality of name-calling and
throwing sticks, which is almost exactly what they do on the radio.
That's a far cry from "taking responsibility".

> There is nothing illegal about
>discussing any topic. This is a free country.

No it isn't. It is a democracy. The laws reflect the opinion of the majority. This newsgroup is an open forum, where everybody has an equal voice. And from the title of each newsgroup you can extract information about the topic being discussed. If your posts are not on topic then you have no right to complain about responses.

So what is the topic of rec.radio.cb? Citizen's Band radio, which is the legally allocated band for license-free communication within certain regulatory limits. If you want a more precise description, go to www.fcc.gov. If you want to discuss something else, go somewhere else. As such, I'll agree with you here . . .

What ever happened to your buddy Anonymous? Did you ever look up the
regs on land-marine communications? Tell everybody what it said so
everyone will know that you are just a troll.

Sparky, FLRC

rh3333 and others...Please note:
This equipment is ILLEGAL for use on 11 meters. in order to understand the rules and regs, please read the information below. This will help you stay out of trouble with the FCC and help you avoid becoming a KEYCLOWN.

You all have a nice day,
N8wwm

Part 95- FCC rules, amended to Communications act of 1934, prohibit communications beyond 153 miles, a power level exceeding 4 watts AM, 12 watts SSB. Use of non type accepted equipment and transmissions out of band are also prohibited.

1292. KEYCLOWN SUPPLIER whines to N8wwm

From: N8wwm
To: RTed821836

You are advertising them on a CB newsgroup. Would you sell pickles in a hardware store? Not likely. Anyway, you have a nice day. Try not to get bit by the plate voltage on those 6LQ6's.

THIS GUY IS AN ILLEGAL KEYCLOWN SUPPLIER. Do NOT BUY THESE AMPLIFIERS.
YOU WILL GET IN TROUBLE WITH THE FCC.

In order to help you fine CBers avoid becoming KEYCLOWNS, I have posted the information below. Please read it and stay legal.
You all have a nice day.

Part 95- FCC rules, amended to Communications act of 1934, prohibit communications beyond 153 miles, a power level exceeding 4 watts AM, 12 watts SSB. Use of non type accepted equipment and transmissions out of band are also prohibited.

Timmy, why don't you go find Lassie and go out to play.There are grown men in here, sonny.

I am being nice because I feel that education is the key here. Just in case you have a desire not to violate federal law, I have posted the information below.

Please read it and heed it, then you will no longer be an ILLEGAL KEYCLOWN.

And hey, pet Lassie for me. Don't pet her where you usually do, either.

Have a nice day.

Part 95- FCC rules, amended to Communications act of 1934, prohibit communications beyond 153 miles, a power level exceeding 4 watts AM, 12 watts SSB. Use of non type accepted equipment and transmissions out of band are also prohibited.

Can anyone enlighten me a bit on the alleged past OR present "WAR" between CB's & car phones or cell phones? I have heard that Cell phones are suppose to replace CB's. We in the industry know this to be FALSE. A lot of our customers have them, and both realms have 2 different and distinctive purposes. So WHO started the LIES about the alleged "competititon" between CB and Cell ? The Hambos? Or the Personal Communications Industry to try to increase cell sales? I didn't get one until about a year ago. I guess I waited for prices to go down, and Digital. I have sold CB's to people in the past that wanted to lower their cell bills by talking on CB, so it was an aid to the CB business and not a replacement! What did YOU hear or think about the issue?
Dave!

BASS'N MEXICO - NEWSLETTER

Hola From Bass-N-Mexico,

Thanks for your interest in Bass N Mexico, Welcome aboard! We will periodically be sending updates to you on happenings around here. However you want to make sure you bookmark our home page below for the latest updates.

WELL, CAN YOU FEEL IT? You know what I'm talking about. Anyone that has fished for bass knows the feeling. You know don't you! When you are enjoying the peace and quite, the still of the waters, the beautiful scenery, then just when your thoughts are about to wander off - THERE IT IS - WHAM!!

You get a hit on your line, you try to break his neck, now he's hooked and the fun begins!!

Whew! This is what it is all about. If you enjoy that feeling then My friend you've come to the right place.

This is what "Wild Bill" Skinner is all about. This is what he does, and now is the time to do it.

Most of you already know about "Wild Bill" Skinner. But for those of you that don't, let me just mention a couple of things. Bill is the provider of "The Ultimate Bass Fishing Trips to Mexico. You see, Bill has fished all the lakes below for going on 3 decades. In fact this past January/February He and I fished all 4 lakes "The Grand Slam" (see No Bull From Bill on the Web - address http://www.bassmex.com)

Over the last 30 years Bill has taken many trips down to these lakes, he has served as a guide for others. Well, one thing has led to another. More and more people have wanted to go, and it got to the point where he had no choice but to figure out away to get his friends down there or else have a lot of unhappy friends. So Bill has made arrangements with all the lodges and is now a "booking agent" for all the lakes listed below and more. He now has a great Web Site, check it out if you haven't already.

As you go through his site you'll notice Bill is First and Foremost a fisherman, and then he is a booking Agent. Bill loves to fish - but he

doesn’t like to just sit in a boat for an hour waiting to get “That Feeling” he loves to FISH - What does this mean for you? It simply means this, Bill not only has the ability to book trips - But he knows how to get you what "YOU" want!! A FISHING TRIP OF A LIFETIME!

He keeps in contact with the Lake Managers at each lake, for all the needed details to make Your Trip A Successful One. He will also help you arrange your flight and save you money on your tickets. So Let Bill help you with your Next Trip, you will glad you did!

Now a little more details about the Lakes!!

BACCARAC - The Name speaks for itself, most Fishermen have Heard of this Lake from all the TV shows. You’ve probably heard of all the “Monster Bass” being pulled out of there. Or perhaps all the Famous people that have fished it,Well Baccarac is still going strong, and you don't have to be famous to fish there, in fact many predict the "World Record Will be caught at this great Trophy Lake!" (Check Out "No Bull" From Bill on the net on all these Lakes)

AGUA-MILPA - Just a few words, 7-10 lb Bass and lots of them, Florida Strain. You’ve got to see it to believe it! Waterfalls, Beautiful New Lodge overlooking the lake, “Margaritas” etc. “This is probably the Best Kept Secret in the Bass Fishing World.” A REAL Honey Hole - NO - Honey Lake!! See "IN-FISHERMAN" Magizine, Dec.-Jan issue, page 22. Steve Quinn's article about his trip with "Wild Bill" last Jan. The SECRET is out guys, so don't miss the boat, CALL NOW!

HUITES - More of the same, many rivers break off of this lake and as in all the lakes, Your Guide knows all the "honey holes" well. You will come back to your room thrilled with your Day of Fishing. Bill is booking Two Brand New Lodges at Lakeside and the Top Water action there is great!! Expect a lot of action and catch Bass up to 12 lbs. and more! (See Bill’s Site on the net for more Details)

EL SALTO - This Lake offers the same and more. Not to mention its “First Class” accommodation, A brand new $1,000,000 Lodge (designed with fisherman in mind) and right on the waters edge. You will enjoy fishing the Underwater City and the Top Water Action!

Friends, we just wanted to highlight some of the finer points here, If you are planning, even thinking of a fishing trip this year or next season Contact Bill for all the Details - He will walk you through the whole thing telling you exactly how to get the most out of your Trip, even the best lures to use. After all this is the guy that Fished the “Grand Slam” this past January and February 1998. He says he did this research so he could help others, but frankly I think he just used it as a write-off and had the experience of a lifetime! He will be fishing another "Grand Slam" beginning Nov 30th with six Editors from various Fishing Magazines. So keep watching his Web Site for the very latest info on these fantastic Bassin' fisheries!

"Wild Bill" has just designed, and is in the process of developing the Ultimate "BASSMEX" TOP WATER Bait, SPINNER Bait & BUZZ Bait for the Big Bass In Mexico, so keep watching for this NEW line of lures designed expressly for the HOGS

that roam these waters. The initial testing will begin Nov 30th, this year! These Lures aren't designed to catch fishermen, they are designed to catch BIG BASS!!

Remember “Wild Bill” is first and Foremost a Fisherman and *THEN* a booking agent. You see it is time to get your dates locked in for the best Bass Fishing you have ever experienced. Contact Him today...You’ll be glad you did, I Guarantee it!

Yours Truly,

Gary Ellis

"Sparky" <sparky@cet.com> ranted.

>There are tens of thousands of newsgroups. Those that wish to deviate
>away from the intended purpose of CB radio can also deviate away from
>this newsgroup.

Why should they?

>> The people who operate illegally do so at their own risk and take
>>responsibility for their own actions.

>Bullshit. There is nothing responsible about operating illegally.

You need to get a grip. I didn't say "operating illegally" was responsible,
I said "people who operate illegally do so at their own risk and take
responsibility for their own actions". As in dealing with the consequences
that they know they will have to face if caught "operating illegally".

> > There is nothing illegal about
> >discussing any topic. This is a free country.
>
> No it isn't.

Gee Sparky, I thought the constitution says we have a RIGHT to free speech

>It is a democracy.

Actually it's a republic.

>The laws reflect the opinion of the
> majority.

That's right.
Like I said, If you don't like what you read here, go away!

Since you are the first to mention this, and since it is apparent that they serve discrete communities, it is hard to imagine a 'war'. Sounds like something in the realm of attempting to raise an argument where none exists.

> On Sun, 7 Jan 2001 15:22:55 -0500, "Barbequed Chicken"

> or for the promotion of illegal activities (which, in and of itself,
> is illegal)

Bullshit. Discussion of illegal activities IS NOT, in and of itself, illegal.

>, or for the advertisement and sales of contraband (which
> also is illegal)

Bullshit. Advertisement of CB "contraband" IS LEGAL. Sales are illegal.

>. CB radio is about radio communication, not keydown
> circle-jerks or playing "king of the airwaves".

That's YOUR opinion. Your definition of "what CB radio is about" is not
everyone's. NOBODY deserves to be harassed or accused of illegal activity
unless PROOF of it is shown. Discussion DOES NOT constitute PROOF by law.

> There are tens of thousands of newsgroups. Those that wish to deviate
> away from the intended purpose of CB radio can also deviate away from
> this newsgroup.

The intended purpose of this group is ANY discussion having to do with
anybody's definition of CB radio. That includes discussion of amps and other
items. This is not an FCC regulated or moderated forum, and is open to posters
in other countries who are NOT subject to FCC regs.

> Bullshit. There is nothing responsible about operating illegally.

That's YOUR opinion. Others who choose to discuss THEIR opinions should not be
harassed as if discussion is "illegal", WHICH IT ISN'T. Those who choose to
discuss Non-Part-95 CB topics here should not be subject to harassment and
accusation UNJUSTLY by TROLLS. Until there is proof, the accusations are unjust
and unfounded and the accusers are TROLLS.

> And when that doesn't work, they whine about anyone that stands up for
> their rights, and call them trolls.

Discussion is NOT proof of ANY wrongdoing. Those standing up for their RIGHTS
TO DISCUSS ILLEGAL CB ITEMS should NOT BE WHINED ABOUT OR CALLED "ILLEGALS" by
TROLLS who lack any proof for their accusations. On the other hand, deliberate
attempts by those who disagree to disrupt discussion with UNJUST accusations
are considered trolls.

> Or they threaten them with
> violence.

Major Bullshit. You're assuming people are breaking the law based on DISCUSSION ALONE, and then attributing all sorts of nonsense to them with NOTHING to back any of it up. You may stand in support of a troll, or may troll yourself, but you CANNOT legitimize it with the law, only your opinion.

> > There is nothing illegal about
> >discussing any topic. This is a free country.
> No it isn't. It is a democracy. The laws reflect the opinion of the
> majority.

The constitution of this democracy protects the freedom to discuss illegal CB items. That's a fact.

> So what is the topic of rec.radio.cb? Citizen's Band radio, which is
> the legally allocated band for license-free communication within
> certain regulatory limits. If you want a more precise description, go

Horseshit. This forum is not regulated by the FCC or it's definitions.

> > If you don't like what you
> >read here, go away!

This would be good advice for TROLLS who wish only to disrupt DISCUSSION between a majority segment of participants they consider "illegals" without ANY proof. Discussion IS NOT proof. There ARE NO PROVEN "illegals" on this group that I'm aware of. It is a RIGHT to be considered INNOCENT until PROVEN GUILTY in a COURT OF LAW. Flaming libelous trolls who don't RECOGNIZE this right is a duty upon everyone who values his freedom.

What illegal CBers, Boobtard? You don't have the right to call ANYONE an illegal CBer unless you have proof that they are operating illegally. Discussion about illegal CB topics or opposition to local CB enforcement does not constitute any such proof. You're a troll libelously accusing those you disagree with of illegal activity. As usual. (SPANK!)

1313. Is G.E. still making C.B radios?

Newsgroup: rec.radio.cb
Date: 2001-01-08 03:13:37 UTC
From: Michael1998@webtv.net
Message-ID: <18501-3A593061-82@storefull-131.iap.bryant.webtv.net>
Source record: 67225

I hope this doesn't sound like a stupid question, but does anyone know if G.E. is still in the business of making C.B.s? I haven't seen any of their C.B.'s for sale in stores like Wal-Mart or K-Mart for quite some time, and I wasn't sure if they were even still making C.B.'s or not. I grew up during the later half of the 70's, and I know G.E. was pretty big into making C.B.'s back then, but I haven't seen any of their radios in stores in probably 8 or 9 years. I couldn't find anything on their web page either. Does anyone know if they are still in the business of making handheld and mobile C.B.'s? Please e-mail me and let me know where I could find their radios for sale if in fact they are still making C.B.'s Thanks!

The reflection coefficient is indeed complex.
The problem is that you asked for the "magnitude of the reflection
coefficient." And I gave you the correct answer.

> >You've changed your question. First, you asked for the "magnitude
> >of the reflection coefficient"; now you ask for the reflection
> >coefficient.
>
> Then why did you respond to this -

I'm just trying to help you by answering your questions.
I was also pointing out how my original answer (0.5) was absolutely
correct even though you still have difficulty accepting it.

And then I went on to answer your new question. Why did you ask
it if you did not expect me to answer it?

> >> In a typical install, the RC value is important. We see SWR issues

I did no such thing. Why are you snipping the relevant parts of
my response that omit my answer to your question? You are being
disingenuous. Let's got back and look at your question and my
answer exactly as they appeared:

Hmmm. Looks like you asked a question and I answered it -- correctly!
Also, I answered your previous question correcty but you are STILL
incredulous.

Tell me where I was wrong. Don't just snip out my response and
claim that I did not respond. You can do better than that.

> >>And, since you seem to have forgotten, what are your many references

I said I would request it. I did. I have no control over a librarian
that is a half a country away.

Regardless, I did respond to this issue with a fully quoted reference.
You haven't disputed it in any way.

Sorry, Sparky, I'm still on top. You attack me from every angle
except with the facts. Give it up.

Another cheap attack.

Why don't you just tell us what is incorrect?

This is the SAME equation you used for "impedance."
I pointed out what was wrong with this using direct verbatim
quotes from the ARRL Handbook.

You don't appear to know the difference between "impedance"
and the "magnitude of the impedance." But I'll give you the
opportunity to explain the difference now. Go ahead. We're waiting.

you know some people don't give a hoot about making a's and b's at
schools of higher learning. some don't care about it because it is not
important to them for whatever reason. heck if i could cruise through
yale and harvard and still get some good partying in well you know what
damn it, i would do it myself. but some of us did not have the
financials to do such , so be it. i am jealuous of him in that respect.
must have been a fine time. hanging around with intellectual people and
going to parties where the sons and daughters of important people are
in attendance. and all the while knowing it or not, making friends that
would be useful some day. and low and behold, now he's da pres, aint
dat something. but if you would care to do a comparison of the specks
in dubya's eye with the logs in clinton's and then you can tell me who
you like better. and your feeble attempts at humor fall on deaf ears
especially after the hell that bunch of sorry no goods put this country
through for over a month after the election. face it jefro , there are
a lot us that jus ain't in the damn mood, sorry about that but that is
sooooooo correct. and your assertion that you are a libertarian, which
is a real pretty sounding name for a bunch of individuals that just
don't fit in anywhere else. i really do not understand you people.
ralph nader?????? do you know anything about this idiot?? he may be
honest, i guess but he would not be happy until all of us were walking
instead of riding and living in caves again eating vegetables unless of
course we are accused of hurting the veggies when we cook them up,
which under his administration we just might. all of this of course to
save his precious fucking governmental forest, which i might add we the
people own. the truth is going to set you free jefro. just tune in to
27.025 on your am dial from time to time and listen to the world wide
voice of truth
breaking it down for all the homies,.....this is cd and i am back quiet

Use this one:
Z = SQRT(Z * Zl)

The antenna impedance is 0 + j50 ohms.
The transmission line characteristic impedance is 50 ohms.
The transmission line is 1/4 wavelength long.
What is the coax input impedance?

1327. What happened?

: If so, then a simple 75 ohm coaxial balun will provide the desired
: impedance transformation.

Oops! That should read "will not provide". I meant a simple 1/4 wave
coaxial transformer. There are other lengths of 75 ohm coax that would
provide the necessary impedance transformation.B

So you're saying that I shouldn't talk about
high powered headlight bulbs on the Ford truck
newsgroup because their illegal. You're saying
I shouldn't talk about modified exhausts on my
bikes, or splitting lanes, or speeding or radar
detectors because they are used illegally.
What a crock! if people want to talk about
"illegal" equipment, they can do so, it is as said
"free speech" There is nothing that was posted
in the charter of this newsgroup prohibiting the
discussion of that subject, and as such you can
say it is illegal too.
You do not have the right to come in here and
whine & cry about the type of discussions going on
though, anymore than I'm sure the motorcycle &
truck newsgroups would have a field day with you
coming in and saying "Headers are against the law"
every time someone asked about the performance gains
that one would get.

Enough said.....

The Landshark

news:3A5857E3.BE7AA141@sccoast.net...

... deleted ...

: headed that way now. I remember an old guy taking me in his "shack" when
: I was growing up and working Mexico. He and his friends were all
: supportive of anyone interested in the radio hobby. As I get back into
: this, I'm finding that Hams tend to be stand-offish, like they're
: guarding some big secret. I mean no disrespect, but I don't know if I
: would want to be a Ham today. I don't fit in in their secret society. I
: guess I'll just fire up the ol' CB and talk to whomever is available,
: amid all the cussing, whistling, singing, farting and whatever else.
: And please, help make this a better group. Don't dignify the trolls with
: a response.

When I got started in Amateur Radio, back in the 60s, the local Hams had no problem working with the local CBers to improve their stations and operating ability. If that help and encouragement led to them wanting to get their Ham licenses, which it often did, the Hams were ready and willing to help all they could there - as well.

From what I have seen, it is the more recently licensed Hams that appear to have the great hatred for CB. For some reason, they cannot accept the fact that some CBers know as much, or more, about electronics than they do. It is also irksome that CBers enjoy DX, one of the great attractors of Amateur Radio, without having to have earned a license. This comes over as a "standoffish attitude" - or even an overtly expressed distaste for anything having to do with CB.

What those Hams should be doing is encouraging CBers to get their Ham licenses - and experience the greatly expanded capabilities that such a license provides.

So what if the majority of such new Hams never contribute anything new to electronics or radio communications theory? The same is true for the vast majority of current Hams. The truly inovative contribute, whether they are Hams or CBers or neither.

The NERVE of some people, huh?

Why not go peddle the stuff on e-Bay? (Oh, sorry, it's BANNED there) OK,
try yahoo.auctions. (Oops, sorry. It's BANNED there, too)

If I were you I'd write to the FCC and complain.

:> Also
:>bear in mind that under the Federal law, licensed stations, such as Ama-
:>teur and commercial, are EXEMPT from such local enforcement. Any ques-
:>tions that arise from the operation of such stations MUST be referred to
:>FCC. LEOS can NOT touch them!

Not true. If the Ham is operating illegally on the CB bands, and many do, then that Ham is NOT exempt from the local enforcement. That person is then an "unlicensed illegal station" who just happens to have a Ham or commercial license as well.

: Hams dont do this type of stupid stuff. But, if one did.....

You want to bet? I am willing to wager that a fair amount of the jamming etc that occurs on the CB bands is due to Hams.

:> Once a license is produced a LEO MUST
:>back off and refer the matter to the Feds.

: Along with a detailed case report, and then the operator can kiss his
: license goodbye.

See above. I read nothing in the law that says a Ham operating illegally is exempt. A Ham or commercial licensee IS exempt if operating on legal assigned frequencies. A Ham who is "freebanding" or operating on the CB frequencies is not operating as a Ham, and is not exempt.

:> Again, to pursue" enforce-
:>ment" against a licensed station places an officer outside his juris-
:>diction and *can* subject him to legal action.

Wrong.

: Once again, lawsuits are nothing new to us.

:> I could see some "rambo"
:>cops interpreting the operator attempting to show his license as "con-
:>tempt" of cop and causing the licensed operator to have to appear in
:>court to prove his operating authority and the invalidity of the action.

: Hmmmm....are you sure you dont post in alt.le under an alias? Tom Alciere,
: perhaps?

:>Again, can you say LAWSUIT?

: Can you say TROLL?

:> I know I would slap a suit against the
:>cop/local authorities so fast, it'd make their heads swim!

: Cool....under our state law, costs are assessed to persons filing frivilous
: lawsuits. How much money are you perpared to spend? ;-)

I hope he consults a lawyer first - one well grounded in Federal law.

BZZZZZT! Wrong!

Your "Captain" has specifically stated again and again that ANY OPINION
is free to be posted in rec.radio.cb. That includes MINE - even though
you don't want to hear it. Also, according to him, "the rights of
illegals" include HIS right to slander innocent people and accuse
them of homosexuality (as he did with N8WWM) or TROLL them (as he did
with Sparky).

Get your darn facts straight. (And see your Cotse-troller-"Captain" for
further details [and news on the latest TROLLING Trends!])

Just a friendly reminder, Ken. The radio you make reference to operates on 10 meter amateur frequencies. Freebanding on frequencies not authorized to CBers violates FCC rules - and is not a smart thing to do in any case.

Hope this helps,
Aaron H. Voobner

You are limited by the antenna. The longer the better.
A $40 CB on good antenna works better then a $400 CB on a sh!tty antenna.

Now your trying to be polite about it, a bit late don't you think? If you going to be polite about it at least explain to the people why they shouldn't instead of telling them "dont do that it the law, blah blah", they are not children for Gods sake. Add some depth please.

If someone states that what you are posting about is illegal, just ignore him. You know what you are doing, whether it is right or wrong. If you choose to stop at a bar on your way home and tie a few on, you know if you need to call a cab. You also know if you are OK to drive.

Don't let the troller see you flinch. The baby just needs his diaper changed and a feeding. Happy communicating!

I basically powererd on, flipped through the 40 channels, and
then hit the transmit for about 5 seconds. I feel
pretty silly for doing this, but in my own stupid
way I thought I was testing the CB to make sure the
power was working. I dont know if I fried anything,
cause the new antenna I ordered wont be here till Friday...

1376. Re: telescoping mast pole

Newsgroup: rec.radio.cb
Date: 2001-01-08 09:23:30 UTC
From: Jay in the Mojave <jay123a@qnet.com>
Message-ID: <3A598712.D5525B71@qnet.com>
Source record: 67436

Hello Landshark: Yes this is good point. And raises a few questions, on how to ground the mast.

If your house already has a ground rod for the electrical power system, then a separate ground rod would be ok in my opinion.

But if you don't have a grounded electrical system, the antennas ground rod now becomes the electrical systems ground, which is not good. But most homes have there own electrical system ground rod, per building code. So yeah a separate ground rod for the antenna would be the way to go.

Something that should be look at, ah!

Jay in the Great Mojave Desert, ...just down the road ah ways from the fillin station.

There are lots of people in *every* newsgroup, including alt.law-enforcement, who accuse cops of corruption. I guess it is because there are corrupt cops. I would propose to them that every CBer is a jerk, since there are some CBers who are jerks. Do you understand the contrast and comparison I am trying to make? The vast majority of cops are dedicated, honest individuals. The minority that are not are the ones that give the profession it's "black eye."

I have been a cop since 1981, but have been a CBer much longer. My original call sign, (back in the day they were required,) was KTL8618. I, like many of you, weathered the "CB craze" of the late 70's/early 80's. I still fondly recall what CB was like before the FCC lifted the license requirement.

I don't argue that local law enforcement could or should replace the FCC, but there are things that we could handle. Jamming a frequency is one of those things.

It amazes me that some of the hams are up in arms over this proposal. Some of the elitists of amatuer radio feel that they should be able to dictate terms of operation to everyone that doesnt hold an amatuer radio license and that they should decide who can or cannot enforce regulations.

To them I reiterate, I dont need lots of electronic equipment or a degree from IIT if I hear music over my CB, look out of the window in my squad and see a guy holding a mike up to his stereo speakers and broadcasting music over his citizen's band radio. If, when I pull him down, the same song that was on the CB is still playing on his stereo, then I think I *might* have probable cause.

Interest in FM broadcast transmitters never seems to go away. It might not be quite what amateur radio is supposed to be about but since RF design is involved then what hasn't it got to do with amateur radio?
Other areas which could be of general interest are 2.4 and 10 GHz, unless you have a very good internet connection, live video (VHS quality or higher) with hi-fi stereo sound over any distance is impossible. Use of modified satellite TV equipment makes this possible over a short distance. No reason why the same gear can't be used for transmitting digital signals.
2.4 GHz is already used for TV and data links outside of the amateur bands (including certain airborne TV applications).
This is the sort of thing we need in radio magazines, along with technical information on mobile phones, pagers, broadcast transmitters (including circuit diagrams), long distance CB (DX CB is just about ignored by magazines claiming to be about CB), scanning (including frequencies which aren't copied out of another book), PMR446 (including modifications), mods for transceivers (seen any in print lately?), anything else interesting or unusual.
I suppose publishers don't want to upset the 'traditional' amateur by printing anything which could possibly be used for doing naughty things, keeping their readership exactly the same.
Even something like a 'Practical Communications' magazine, covering the whole commuications side of electronics, including mobile and internet data. Try and connect popular things like text messaging and dance music with the subject of electronic(radio) communications. How about interviews with real people (anonymously if required) about things like 27 MHz SSB, scanning, broadcasting, even repeater jamming if anybody

wanted to come forward.
If young people love sending messages of up to 160 characters to each other then there must still be a demand for a low speed, text based radio data system, even if it isn't AX25 packet.

| >I think its an image thing as well, you hams *HAVE* got to get shot of
the
| >image that the hobby is for middle aged or retired OM's with right-wing
| >political views
|
| And what exactly is wrong with being middle-aged, or retired, or
| having right-wing political views?

nothing, *provided* such people are prepared to show some *tolerance* of
those with opposing views.... perhaps I should have said "totalitarian or
entrenched" views instead, the so-called left can be just as bad in this
respect [viz. old-style soviet union, and Jack "Boots" Straw...]

whether some people realise it or not or want to change things, at the
moment ham radio *is* still coming across as a "boring" hobby, and I keep
hearing stuff about how some people won't have a QSO with someone who has a
2Exxxx license or an M1/M5**** license or has used a CB set etc etc....
doesn't exactly make the scene too inviting to the younger generation......

something needs to be done, I actually know people who are licensed as G4***
and have done all the "proper" stuff like morse, building their own rigs out
of old telly valves etc.... and even *they* are getting bored with the
hobby.....

as I mentioned on another thread the VHF/UHF bands are *dead* down here -
although I know both repeaters are u/s at the moment surely there would be
some simplex operation down here?

| > [and I know not all of you are like that anyway]. and a
| >question of education.
|
| It *is* a question of education.
| For the record, I am in favour of UK
| CB operators being allowed to use SSB on the 27 MHz band. If this is
| what they want, for heaven's sake let them have it ....

wow! something we agree on ;)

it might put
| an end to their silly aspirations to become radio amateurs.

and what makes a *real* radio amateur? I'd be interested to know people's
thoughts on this ;)

Alex

>
>From what I have seen, it is the more recently licensed Hams that appear
>to have the great hatred for CB.

This "hatred" thing is over-rated.

Two things keep stirring the mess. One is the use of illegal equipment by CB stations where it causes inteference to Amateur Radio frequencies. The other is intruders into the 10-Meter Amateur band.

If you'll look at the FCC enforcement logs, you will see that attention is being focused on these two matters. Nobody has been "busted" for working skip. And nobody pays much attention if you fire up a Saturn Turbo and keep it within the 40 channels assigned to Citizens Band.

On the other hand, if you're killing your neighbor's telephone and television, operating out of band, or running a signal which spaltters six channels wide, it's like sticking your head out of the foxhole. It's likely to be shot off.

The CB and Amateur services got along just fine for many years. Then a new breed of "outlaw" CBer came along--folks with no respect for anyone or any laws. It's not the "newly licensed" Amateurs that created the friction. It's the "anything goes" people who took over the CB band from the fine folks who were there for decades.

What amazes me is that the 11-Meter crowd allowed this to happen. Nobody challenged them. Instead, they defended them!!! This wient on even as the outlaws rendered the CB service unusable with super power and wide modulation.

Why did folks sit back and let somebody take over their band? The Outlaws created a diversion with the "Hams Hate Us" lie, and the regulars on 11-Meters fell for it.

>
>What those Hams should be doing is encouraging CBers to get their Ham
>licenses -

Already being done!

Many of today's hams have CB experience. Anyone who expresses an interest in obtaining a license will find plenty of help from the Amateur community.

For those who remain with 11-meters and grumble about conditions there, remember: You allowed the take-over to happen and you allow it to continue. How? By spreading lies about Amateurs to cover up the REAL problem. By supporting "key-downs", and by treating the guys with six pills as heroes. Heck, anybody can throw a little money at the hobby and do the same thing. The Outlaws have you "snowed" so bad that you let them ruin things and they

CONVINCED YOU THAT THEY'RE YOUR FRIEND.

If that's not good salesmanship, I don't know what is!

CB always seems to be described as if it wasn't a hobby. More like it
was some sort of PMR. Like many other hobbies, enjoyment can be got
from building up a station or improving your own distances
covered/contacts made or whatever.
Mobile phones can do what a CB radio can but that isn't the point.
Using a phone isn't a hobby, maybe some people love the excitement of
adding a new ring-tone but it's just a thing in use everyday
(conversation on a phone isn't any different to if you spoke to the
other person directly).
PMR446 hasn't really taken off as a hobby, it wasn't designed as one
(neither was CB originally), maybe they should have customised tones
(instead of the 'roger bleep' the Telcoms have) then there might be a
huge following.

add the fact that they probably wouldn't be able to put the equipment
anywhere as they are likely to be living in a shared building.
It's hard to imagine what the average student, living in a flat in the
middle of a city away from home, would do with a CB radio. Even if the
things were used to talk to their friends nearby, it's still hard to
imagine it happening (even though it might have its uses).

Mike:
If they are, they are junk made in China now. In the 70's, they made some great Classic CB's, made in Japan, which made the BEST CB's!
They may have handhelds made in China, and probably no CB's. Handhelds from them I've seen maade in China. Buy Uniden CB's or Maxon or Midland hand helds now.
Dave
"Michael Brown" <Michael1998@webtv.net> wrote in message news:18501-3A593061-82@storefull-131.iap.bryant.webtv.net...
I hope this doesn't sound like a stupid question, but does anyone know if G.E. is still in the business of making C.B.s? I haven't seen any of their C.B.'s for sale in stores like Wal-Mart or K-Mart for quite some time, and I wasn't sure if they were even still making C.B.'s or not. I grew up during the later half of the 70's, and I know G.E. was pretty big into making C.B.'s back then, but I haven't seen any of their radios in stores in probably 8 or 9 years. I couldn't find anything on their web page either. Does anyone know if they are still in the business of making handheld and mobile C.B.'s? Please e-mail me and let me know where I could find their radios for sale if in fact they are still making C.B.'s Thanks!

What are you saying. Some X-Force amps are made in China?

Looks like X-Force needs to put up some Pics to show everyone what they "really" look like.

Who's a 'real' amateur to these people? Somebody who agrees with them!
Somebody like them.

Because 90% of amateurs are somehow NOT 'real' amateurs. But yet they
are amateurs, stangely! How odd :o)

Funny how some people can't live and let live isn't it?

1400. Here's a few suggestions.....

Newsgroup: rec.radio.cb
Date: 2001-01-08 14:54:12 UTC
From: JAD <jdavoli@NOSPAMerols.com>
Message-ID: <93ck9pldn1@bob.news.rcn.net>
Source record: 67503

Buff, I think it depends if you operate primarily AM or SSB, but here are a few examples of mikes that will do both pretty well....

First, I don't like desk mikes (operating from my desk chair, I like to kick back and relax, bringing the mike to me, rather than leaning into the mike on a desk.) Is more convenient to bring the mike closer to the mouth, with a little less gain.....you cut out room noise and get clearer audio....just lower your voice to a nice quiet level and let the rig do the work. Easier on the voice as well..... With that it mind, if it MUST be a desk mike, find a TURNER +3....they sound GREAT on almost every rig I've heard them on. No longer made, you can find them second hand on the auction sites, or perhaps at your local CB or ham shop.

For base use, the Astatic 575-M6 hand power mike is a good choice. I hear that they do not hold up well operating in a mobile environment, but base should be OK. The audio from these is damn good, and they have level AND TONE sliders right on the front, to tailor the audio response to your voice and the mode you are using. Most sidebanders will tell you this is the A-1 mike available from dealers at present.

If using a hand mike does not bother you, you may want to consider just swapping out the existing mike cartridge in your stock mike with a HEIL element, available at ham shops for around $26. Is easy to do. There are two HEIL elements, one that is full range audio for ragchewing (nice, warm sound.) and one that cuts out some of the lower frequencies for a little more "punch" for SSB DX. BOTH elements sound GREAT. After installing this element, I would take that Washington to a good tech and have him set up the audio levels in the rig, for optimum modulation and such (with YOUR voice, at the level YOU like to talk at,) as these often need level changes to sound best. Remember, that a power mike is NEVER required to get the most audio or modulation out of a rig.....the rig had plenty of audio amplification built in, and it just needs to be adjusted properly to sound best. Power mikes ARE handy for SSB operation (especially while mobile,) to vary your output power FROM THE MIKE. Just a convenience thing. Also, I use different mike settings for AM and SSB, and while on the road it is nice to be able to set them from the mike (I use a D104-M6B.....sharp audio but clear....good for the road, and a rugged mike for mobile.) I don't believe that the D104-M6B is the best for fixed station use.....It'll work fine, but is a little "tinny."

Good luck with whatever you choose, and come back with any other questions.....

Ride on!!!! ....Joe

> CONVINCED YOU THAT THEY'RE YOUR FRIEND.

Nice post QRM! As you say the "outlaws" on 11m have convinced the average CBer that they are their friend, and hero. I got out of CB radio over 20 years ago because of the idiots running power, out of band operations, and the kids learning how to fine tune their potty mouths by practicing on the air. You try to talk to somebody a few miles away and some channel control freak keys up over you with his amp because you did not ask "their permission" to use "their channel".

Ham Radio at least there is plenty of spectrum to operate in, multiple modes to select from, you can run high power legally, and you don't have to be looking over your shoulder wondering if that "black FCC van" is down the street with the tape recorders running, and saving everything you do to tape like some of the illegal CB operators do.

What I do fine so strange is the willingness of many CBers to put up with the crap on 11m because somebody has convinced people like Tim that Hams hate CBers. Yes 11m can be fun at times when you can fine a time and channel clear of the idiots. A Ham license, on the other hand so easy to get nowadays, at least in the US, the average CBer should have no problem passing the tests. So if a Cber wants to escape the mess on 11m they can.

What the outlaw CBers try to do is confuse the issues. Hams don't hate CBers, we just dislike the illegal operations that occur, some of which has impacted Ham radio. The outlaw Cbers twist that around at every opportunity they get in to hatred for Cbers in general. When the issue of illegal 11m operations comes up on this news group the first to complain are the outlaws. What most CBers fail to understand is the outlaw CBer has a vested interest in maintaining the chaos that exits on 11m, which gives them a safe place to hide their activities, by trying to convince others what they do is

OK and to join in.

Unfortunately, the agitators have already figured this out. I have a NiMH Talkabout 280SLK that I keep in "scan" mode whenever I'm out and about.

I'm hearing more and more "CB behavior" on the FRS channels: foul language, threats of physical harm ("I'm gonna find you and kick your...."), deliberate interference, etc.

I suppose this is to be expected in today's junk society. *sigh*

Exactly correct Meg. Real amateurs are those who passed proper exams and
do NOT and will NOT allow amateur radio to become enhanced CB bands.

>
>Because 90% of amateurs are somehow NOT 'real' amateurs. But yet they
>are amateurs, stangely! How odd :o)

How did you arrive at the 90 percent figure. More of your fantasy I
suppose.
A large proportion of amateurs sadly arrived from CB when they took
advantage of the lower entry requirements. People like yourself. Some of
us real amateurs would like to see you return to CB and stay there.
>
>Funny how some people can't live and let live isn't it?

You live on CB and leave real amateur radio to real amateurs.

Yo' toomanyradios, I hear that stuff too, although you gotta admit, there is a bit of humor in it when you get someone on the frequency and they're all freaked the hell out 'cause they thought it was their own damn private radio. The following happened to us XMAS DAY on the way to grandmas house as my daughter chatted with a (ahem) friend on FRS channel 6 with the privacy code tuned to 15 in the backseat of the van:

daughter:can you still hear me? (Talking to that dreaded person all fathers of girls deal with sooner or later, the FIRST boyfriend)

~interference and static~

daughter: hello? where did you go?

~more static~

unknown male voice: who is this?

daughter: Who is this?

unknown male voice, screaming: who the hell is this on my PHONE? (note: he called it a "phone")

Me: This ain't your phone pal

unknown male voice, ranting: @#*% you I bought it youre on my phone Im gonna.....

At this point it became apparent that he had no clue what was taking place. It was apparent they were a gift for someone Xmas morning, who thought they were similar to cell phones, or the Nextels, was all I could figure. But he was an ass about it so at that point I told him no wonder I had been making all these calls billed to someone elses home number, and yep, you guessed it, he flipped, started going so nuts that I shut it off. But ignorance IS sometimes humorous. Too bad it isn't painful as well...hehe.

qrm, ive said it again and i'll say it before. if every trucker in the USA was
to never key up on 10 meters agains the problem would not be gone simply
because the majority of ten meter interlopers are from latin american countries
speaking spanish and there governements could not care less about itu treaties.

YES YOU'RE RIGHT!!! Just like all those
people that own the road. Yup, they have made
driving the highways and freeways such a sewer
pit that it's not even safe to drive in metropolitan
areas anymore. Yeah they'll tailgate you like your
in a Nascar freight train. Go by you so fast that you'll
think Superman just went by you. Then there's the
ever-loving-I-own-the-road-at-whatever-speed-I-
want. Yup he can drive down the interstate freeway
at 40 mph, so what if the speed limit is 70.............

I OWN THE ROAD

Now try to figure out how, what I have just said
has relevance.

The Landshark

fred, it should be obvious to you how much drive two 2290's take. i thought you ham guys were radio gurus. 2 watts input cw or 8 or so pep on ssb should be fine from 80-10 meters. this amp is great for the qrp kits used by hams on 20 and 40 meters because the amp has tremendous gain in that freq range. you might want to ungroud those transistors and bias them if your going to use voice or data comms. as it is now its setup just right for qrp cw transmitters only but since your a ham radio guru i'm sure a little solid state amp modification would be no problem at all.

Nice post, but it's not highly accurate or reflective of the truth, and neither is yours. Why do you make the assumption the majority gripe about the condition cb is in? I haven't noticed any take over. It's pretty much been the same for years and years now. There are channels for keying off and for DX. If any one is twisting words, it is you with that clever distortion of "any one who supports key downs'....when you should have written just exactly what you REALLY meant, and that is anyone who isn't ANTI keydown and doesn't think the way you do is guilty of some maleficence, eh? I've said it once, just like all you folks have the right to crow your opinion, and I'll say it again, and again, and again, if I am talking DX on any cb channel on a stock radio, how in the hell am I interfering with ham radio? It doesn't. I know some of you have a hard time separating the DXers from the competitors, but not all of us splatter the spectrum with a gazillion watts, operate garbage equipment, and make your mothers toaster say things so that she thinks she is nuts.
But, on the other hand, when my radio buddies who I talked to and have known for years, all get together for a night of fun on the beach or swamps with the mud trucks, and introduce a new power box or something, we check it out. Before all these super sized boxes were being made, and before cell phones, a big 'ol sweet Texas Star was almost a fix in every crackers truck and that was just to stay in contact with the home 20 from the swamps or woods. This stuff didn't just 'suddenly" occur overnight, gentleman. Stop it when it was occuring? You seem to be of the mindset most were against this advent of technology. I assure you that wasn't the case. The amp makers and manufacturers were and are not in the minority. They are the direct result of a clamoring demand created by..ta da..the public. If you can't control demand, you can never control supply.

1423. Errin' Boobtard Has Learned His Lesson

Hey Sparky, it doesn't satisfy me. Not only because your claims
are patently false; they are nowhere to be found in your reference!

I now have a copy of the section of the document that you
reference above. And guess what? I cannot find these paragraphs in it!
Just as I suggested, you have paraphrased your way into inaccurate
statements and have improperly used a reference to back yourself up!
It is now obvious why you would not post verbatim sections of that book
as I requested.

Give us the page number and paragraph number where these paragraphs of your "reference" alledgedly occur, plus give us the exact text from the "reference" and I will post a scan of that page to show what actually appears in Kellejian's book.

HEy Ken! The Galaxy 77 would be an ideal choice for the newcomer to freeband. I had one and ran it flawlessly for years, held up to muddin', 4 wheeling, swamp and sea water hitting it and spraying it, and you can talk world wide with it. The wonderful world of freebanding from your vehicle presents almost no chance of you being prosecuted for it, especially if you run no real power. There are many, many wonderful people to talk to on the freeband in far away and exotic locales. If you wish, you can even exchange cards with some of your contacts, getting a nice word wide collection going. Good luck with it!

Sparky, if you think ICECOLD is showing ignorance or stupidity, at least show your evidence as I did with *your* friend. His questions to you were polite, straightforward and sensible. If you don't like "keyklowns", just don't read or respond to their posts. I'll be glad to engage you in a flamewar if you're just pissed off at me and want to avenge my righteous wrecking of your snooty pal Errin' Boobtard.

Source record: 67540

I am looking for a vertical that can be used across 10, 11 and 12 meter operations. I've heard that the Imax 2000 is broadbanded enough and handles the 3 meters fine and without tuning. I've also heard that the Imax 2000 is prone to causing a greater amount of RFI to neighbors.

Does anyone have any experience related to the Imax a/o the Maco, their ability to work across the 3 meters I've mentioned, and their relative RFI.

Must you label this *Bad* behavior, CB behavior? I hear just as much crap on 2 meter as I ever do on CB. Jamming, profanity and threats, you name it. I am tired of people labeling all persons interested in CB Radio as criminals and outlaws. It's just not true and most of the offending accusers know it, they just want to agitate and CB is a convenient group to attack. After all, not too many friends of CB in Congress, are there?

It's people like you that make me say, "I hope you don't get enough
usage on the ham bands so that more spectrum is auctioned off."

You want to be an elitist group, so be it. Don't bitch to me when
all you have left is CB, MURS and FRS. You'll be the loudest to cry
after 2003 when the code requirement is dropped. You should be trying
to find good people and elmer them in rather then turning the masses
away with your sh!tty attitude. Catch you on the popular band!

Most CB'ers could pass the no-code test without studying. Most CB'ers
could care less about ham radio because of stuffed shirts like yourself.

I'm not personally aware of any hams who care who you talk to or how far away they are when using a "stock radio". I said that in my post, and I'll say it again. Hams don't care what you do inside the 40 channels.

However, when you splatter over a wide chunck of spectrum and if you intrude into 10 Meters (either directly or with spurs), you have the full attention of the ham community and FCC Enforcement.

Just for the record, I have been active on CB since 1963. You don't have to tell me the history. I was there, and I'm still there. So get off your "high horse". There are three shops within an hour of my house where I can purchase one of those power boxes if I want to lay down the cash. Being in possession of one ain't no Big Deal. It simply means you don't mind spending the money and you're willing to take your chances. That makes you somebody special? I don't think so.

CB is 800 KHz of RF spectrum below 30 MHz. Anything else is not CB.
Amateur radio is something which is not done as a job and has to
involve radio. It can't be changed into CB because one is a hobby and
the other is 800 KHz.

I can use any channel on my TRC-451 or PC-122 that I want. Since I only run a radio in my mobile, and it's noisy as hell during the daytime, if I need a little help, I got a button. My equipment is unclipped, and my output is clean as a whistle. I don't even use power mikes. I don't use class C crap. I am not the cause of the noise on CB. I use sideband 99% of the time. AM sucks. You don't even use CB. Go back to ham. LID!

Do you have any evidence for your statement ? My guess is that most CBers don't even know Ohms Law. (And thats not intended as an insult to any CB users, it is a reflection of the fact that most [legal] CB users couldn't care less about radio or electronics - they just want to talk.)

Since you've already cut the modulation limiter in your PC-66, try a
636-L or other NON-AMPLIFIED mike. Distortion does not equal loudness.
It only makes you hard to understand. My telephone quality audio will
go just as far as your distortion and be easier on the ears. Spend the
money on a better antenna rather then an overpriced gadget.

For AM only operators that may be the case. Sidebanders are more
hard core radio operators and know more then you would want to admit.

Here's an idea - to the "CEO" - if you made such an attempt to issue a check once, contact the buyer via email again, confirm a good address and send him another damn check! Don't act like you have no obligation to refund his money now since your staff apparently put an incorrect address on the envelope! You are damn lucky he hasn't contacted the Better Business Buro, the state department of Consumer Affairs and the electronic/internet fraud division of the FBI!

Tim, I've gotta agree with Doc. A story may have been published, and it might be mostly true - but more likely someone didn't slip a decimal point in there. The thread started with an honest evaluation of FRS radio - the fact is that the antennas are not removeable and the power is low. It is true that there are propogation enhancements (not F layer skip), but you are looking at a SMALL signal to start with. I have a 440 MHz HT with a 16 inch gain whip. I can consistantly open repeaters 40 miles away - but the keyword is open - my signal is quite noisy at that distance PLUS the repeaters are up on Bristol Mountain and have high gain antennas. My usual distance to ordinary repeaters is on the order of 15 miles running 2.5 watts with good quieting. I have only heard 1 FM station at a distance about what was being discussed - and that was a commercial 50 KW FM station. Also, being in a valley, hole, or canyon does not help. There is defraction of the waves - I used to calculate this designing commercial UHF television repeaters back in the early '70s, taking into account fresnel zones. This is an additional LOSS. Typically, expect no more than 2 miles from the FRS handhelds. A co-worker of mine bought 2 FRS units so his wife could drive the car while he drove the truck with the boat behind. He is happy with his FRS. It can maintain communications up to about 1 mile between cars which is all he was concerned about. Although ranges beyond 100 miles are possible between UHF stations, these are running high gain beams and running hundreds of watts (or, huge arrays of beams running 1000 watts and running moonbounce). Although some propogation enhancements can extend VHF and UHF into the thousands of miles, these are kilowatt (at least, hundreds of watts) stations and you are not likely to achieve that kind of power on double a alkaline batteries (plus, you'd need a better antenna than the little ducky on a handheld). At a half watt or so erp, I'd be surprised to see it go much over 10 or 20 (at very most) miles, and that would imply being in the open on top of a LARGE hill or high rise building with no obstructions between stations.

73 from Rochester, NY
Jim

Amen, Brother! Calling my HOBBY, not a hobby. I, and I'm sure a lot more CB
Ops who have more knowledge than me, have taken the tests, right up to
Extra, and PASSED!
I wish some Hams would get a clue and realize that most CBr's are
perfectly happy and don't *need* the ham license to make them feel good
about their *HOBBY*.
Good grief but the level of self importance in some people never ceases
to amaze me...

Jeff

Source record: 67562

G Seven,

I agree with you on the points you made regarding his approach to his convictions. That's what I've been trying to tell him. Hey, I don't condone illegal stuff and don't do it. BUT, OTH, how many posts do you see raising hell at me? Hardly ever. I might point out that something is illegal IF I am asked about that part of it, but I'm not gonna rant and rave on....and on..... and on.... The simple fact is people are going to do what they are going to do, and I am not delusional enough to think that *I*, singlehandledly, am going to change the radio world all by myself. I am confident that I can disagree with you, for example, but if I do it in a mature, respectful way, I'm not gonna piss you off to the extent that you are going to come back with pornographic phrases, and vile accusations. It is Voobie's APPROACH that I strongly object to. It is his so-called "connection" to ham radio that, frankly, embarrasses me and dismays me because of the negative impressions he causes thereto.

It is an unfortunate fact that placing someone in the vicinity of a radio *sometimes* causes that person to suddenly have these delusions of being some kind of spy, or secret agent, or increases their "toughness" beyond the realm of the average joe. Witness Voob's references to his "contacts" with FCC. Hell, it's no more than you or I *could* do by simply using FCC's email address. I've even seen people that bought a scanner exhibit these strange behaviors. Hee Hee! I know a guy that puts 7 antennas on his car, many of which are duplicates, and the radios themselves identical, and he has these psychological changes in behaviors. He doesn't realize that people laugh at him going down the road! The car looks SO silly! All it would take to do whatever "job" he thinks he needs to do with these radios would be a CB and a scanner with the resulting TWO extra antennas. Like Buddy Ebsen (Jed Clampett), I "wonder about that boy'! Do ya ever run into these types?

No high horse, here. Don't need it. I do the word barefoot just fine, thank you. You say one thing, but the gist of the matter of late is you either obey all the rules or you're a criminal. And I'm gonna shoot that full of holes every time it comes up with some real merit and substance, the same goes for talking above or below 40 if it ain't on the hammie bands, quit yer belleyachin'! If your sole argument is splatter boxes, say so. If yer of the mindset of some of our shakier resident boobs, thats cool, too, but it is meritless.

Tim,

I have NEVER understood how grown men can get any kind of jollies, no matter WHAT radio service it is, doing stuff like that. I just can't fathom it. I hear the same stuff, too, with much dismay. I end up QSYing somewhere else, and, thankfully, there is enough spectrum that I can find a place to talk with sensible people. I fully support Riley H.'s efforts to clean this stuff up. I want to talk with sensible, mature ladies and gentlemen with "normal" senses of humor and the ability to discuss various topics, technical and otherwise. Not clowns, babies, and extra class JERKS with the maturity of a preschooler. Heck, I've had QSOs with 8 year old hams with far more savvy than that.

Thanks and 73,

Jerry

Or it could have been you Tim, using your cheap modified Yaesu H.F. rig connected to a dipole antenna. You don't make any big secret about using modified Ham gear on 11m, and a while ago you were asking questions about bootlegging on the old "Echo Charley" frequencies. I would not put it past you to be doing some H.F. jamming too. You clearly have the mind set to be capable of that sort of thing.

Mercy me, I don't understand why anyone would buy illegal amps designed specifically to be used on CB.

I'm sure you wouldn't buy one or use one because you know they (a) are illegal to use on CB and (b) it's just not gentlemanly to overpower other CBers.

I'm sure you know all this, but I thought I'd remind you in case you have misplaced the information. Check out the FCC Rules Part 95 if you have any questions or feel free to email for advice.

Hope this helps,
Aaron H. Voobner

I'd like to help with suggestions for a new name for DaveMade but in
order to get to work, I'll need some relevant info, i.e., what is
DaveMades product focus, who are its customers, what is its target
market, sales volume, CEO's vision, etc.

Jack,

You are, indeed, not wrong. The law does state that local entities *may* pass local statutes within Federal guidelines to deal with "problem" CB stations. They have to do that first. Many local authorities may elect not to get involved if they have not been subject to many complaints regarding this.

My problem with this IS the equipment identity, technical expertise, and the possible abuse of such statutes by over zealous LEOs and/or governments looking at this as a way to *enhance* revenue. Unless these local gov'ts completely educate themselves AND their LEOs in just what their authority is, and over whom, I can see it causing trouble for innocent CBers and hams as well. In their eagerness to achieve revenue, it *could* be that, at least until they run into stumbling blocks (Judge throws out their case, ham sues hell outta them, etc), innocent people--especially those who may not know their OWN rights under the law-- may get "busted" for something they didn't even do.

As a matter of fact, I hope the law results in such problems to the extent that the Federal law is overturned and funding is routed to the agency that should be doing this--FCC--such that agents could be hired to address the issue.

That is my own opinion. I have nothing against law enforcement, per se, but it just seems that there is enough of a lack of relativity between LEOS and electronics to make this a bad thing.

Tim,

Help me out here. As you described DaveMade Amps, they are ideal for amateur use. Yet I have never seen "DaveMade" advertised in QST, CQ, AES or HRO, and have never seen a review of them or a mention of them listed in the back issues of any ham publication on planet Earth.

I called HRO and AES and they told me they never heard of "DaveMade" amateur equipment and they don't carry it.

Puzzled,
-Aaron-

Ah well ged, with one stroke of the keyboard, you just managed to put
back Anglo American relations twenty years.

Ronald Regan and Mrs Thatcher's good work was all to no avail.

Still ged, keep the red flag flying eh!

Catch you on the flip side.

Damn Jerry, sounds like a good 'ol boy down here we call RAmbo. He's all 5 foot 5 and just as wide, badges and patches on his uniforms and flashing lights on the truck with all kinds of radio equipment and way too many antennas. He's a night security guard for Wackenhut, but, my oh my, thinks he's Dirty Friggin' Harry. When he's on the radio, all someone has to do is call for "inch high private high" for a great show. He's alright and we try not to let him know that he isn't really saving us all single handedly.

ham.

Hey Jerry! You letting Tim lead you around by the nose or what? He never stated "as fact" it was a Ham. All he IMPLIED was it was an Extra Class Ham in the General Class section of the band. He never stated he heard a voice, call sign or anything else other than a carrier. It could have been caused by anything, or anybody including a non-Ham. You and I both know there are bootleggers on H.F. using fake call signs, or somebody using the call sign of a Ham friend, with or with out their knowledge. Instead you jump to take the bait he offered to do his dirty work for him - Ham Bashing.

Why don't you ask Tim how many times he has bootlegged on the Ham H.F. bands? He has the equipment to do it. Do you think he is really going to answer honestly? And you really think all he uses that 100 watt H.F. Ham rig for is 11m two-way operations and short-wave monitoring?

Saw a ham at a swap meet that had so many antennas on top of the cab of his truck a fly could not fly straight through without hitting one. Under the dash from the steering column to the passenger door were as many radios that could be crammed into the space, plus the seat was full of radios leaving only enough room for the driver. I bet that when he heard a call on one of the radios, by the time he figured out which one the calling party had long given up. Goofiness isn't confined just to the cb band.

Cowboy,
1. No antenna is going to cover over 4 Mhz of spectrum
in the HF frequencies without some means of 'tuning'.
2. Antennas do not cause RFI, radios do. The Imax, A99,
etc, are no more RFI 'prone' than any other antenna.
3. If it sounds too good to be true, it usually is.

Even probable cause is mushy ground in a pre-emptive case where the locale
pre-empts federal prerogatives. The FCC has been unhappy with several
locales that have tried to.

>> From your post (Wooo-Hooo!),
>>you sound a little too eager, which is one of the reasons I am not much
>>in support of local enforcement.

>>expertise to DF and/or operate a spectrum analyzer to nail down an of-
>>fending signal.

He is right. the LEO who use what they see hams doing often miss a
couple important steps. forensic traceability is not too much seen in early
ham turkey hunts. I do not speak to fox hunts which is done for training
and sport, but the hunts for that turkey with a stuck mike or who thinks it
grand to play music on a ham frequency.

>and saying "Ba, Ba, Booey" over and over again. Now, I have probable cause
>to believe that *he* is the person that is violating the ordinance. See, I
>didnt even have to attend IIT to figure that one out.

You have probable cause, but you don't yet have a case. I recommend
carrying a small tape recorder, and taping tyhe miscreant whenever you
can, starting and finishing, where practicable, tieh your own data,. like
"Badge 30054, date one jan 2k, oh-six-hundred, eastbound on 244.
at mile 65."

Get a statististacilly significant number of these, and if you see him/her
with your own eyes, say so. The add description of the vehicle, and
be ready to watch to see if they are doing the same again. Your fellow
drivers can also watch and if you develop a "baby call" i.e., here's that
baby again, then they might be able to put the car within easy range
another time you tape the infraction.

Your next xtep is to get the traced person by dcar license and
their phone number and call and get them to say something that
has some of the syllables that you taped, if you can.

>> I would caution LEOs that to begin "busting" CBers
>>without definite cause could generate lawsuits against cities, counties,

>Cool....under our state law, costs are assessed to persons filing frivilous
>lawsuits. How much money are you perpared to spend? ;-)

The publicity woild be bad, though, if he went at it right.
BUT if you go at it right,, like get the data I sadi, and go to the feds
yourself, and present the data and your interpretation, and ask for
a warrant. the feds to go to are not the FCC, unless you want to,
but to the nearest US Marshall's office. Most marshalls have seen
this show before, and some might even just hand over the warrant,
but most would want to serve it themselves., Often, the miscreant
may be a lead in to something bigger., like the "union" of some years
ago.

The fact that the other poster had valid carps about your process,
that does NOT mean you are without recourse, and in fact, the
Feds want better (not just "more") local participation.

Really you and Tim must be good buddies, working together as a tag-team. Tim tries to slip one by, Jerry takes the bait, and then you come along to try to do damage control on Tim's behalf. Figures. Let Tim stick up for himself for once, or do you enjoy being his crutch to lean on when he gets himself in trouble?

I consider myself technically inclined. I have many "Hobbies", one of them being CB. You tell me that what I enjoy doing is not a hobby and that I am wrong to think it as such. I tell you that you are a meddling asshole and should stop telling people what to think.
I guess we're at an impasse, eh?

1504. Questions about the midland handheld 822

Newsgroup: rec.radio.cb
Date: 2001-01-08 23:13:09 UTC
From: blue_yin <blue_yin@my-deja.com>
Message-ID: <93dhi0fmh1@nnrp1.deja.com>
Source record: 67611

Hello out there!

Some time ago i purchased the midland 822 and i have enjoyed the limited use i have had for it. But now i have a couple of questions.

1)i would like to get more ground miles off the unit when its seperated from the car/house. can someone suggest a better hand held antenna? or is it just worth it to use the duck(plastic) antenna it came with.

2) i know that this handheld can be modified... how or where does someone go about doing this? Were my sodering skills up to it .. i would do it myself .. but as they are not... i dont feel worthy doing it.

Thank you very much!

So what does that prove to me? if the needle stays still they dont have 100% modulation, if it backs up it probably that they have the deadkey set higher than the radio will hold rms wise.(take the what it will "hold" as what the rms watts are under modulation) are the legal stock" radios tuned for optimum performance? i dont think so

Look up the word 'paraphrase'.

>Just as I suggested, you have paraphrased your way into inaccurate
>statements and have improperly used a reference to back yourself up!

Just how much of it did you actually read?

>It is now obvious why you would not post verbatim sections of that book
>as I requested.

As I have said many times before, I explained a long time ago why I
would not stoop to your demand for exact quotes.

>Give us the page number and paragraph number where these paragraphs
>of your "reference" alledgedly occur, plus give us the exact text from
>the "reference" and I will post a scan of that page to show what
>actually appears in Kellejian's book.

Wonderful! Post chapters 2,3,11,14 and relavent portions of chapter
12. Those provide the absolute minimum required to gain even a basic
understanding of transmission line propagation. Or, if you are lazy,
post any part of what you have that contradicts what I have
summarized, without pulling either out of context.

Until then I will continue waiting for some of your many references --
the ones that don't have any typographical errors.

FAQ Question #1 - Can I extend the range of my walkie-talkie?

An RF wave from a CB transmitter is about 36 feet long. You need a
quarter wave (electrically or physically) to transmit. A handheld
unit can not and will not ever get any decent range without an
external antenna.

We had a guy whose car looked like an inverted hay rake and more radios
than you might believe possible for the car. He was the local Civil
Defense co-ordinator.

We got him a beanie with 3 propellors and his job title embroidered on it.
Radio does indeed do strange things to some people.

You have the constitutional right to free speech. Fortunately, there
are limitations on that right. For example, I'm sure you know that you
can't yell "FIRE" in a crowded theatre. And then there are such things
as libel and slander. There are also restrictions on the media which
may or may not restrict the content. So if you want to blab about free
speech, then you need to understand what is meant by 'free speech'.

>Bullshit. Discussion of illegal activities IS NOT, in and of itself, illegal.

I didn't say 'discussion', I said 'promotion'.

>>, or for the advertisement and sales of contraband (which
>> also is illegal)
>
>Bullshit. Advertisement of CB "contraband" IS LEGAL. Sales are illegal.

That's what I said. You have your conjunctions confused.

>>. CB radio is about radio communication, not keydown
>> circle-jerks or playing "king of the airwaves".
>
>That's YOUR opinion. Your definition of "what CB radio is about" is not
>everyone's.

The FCC defined CB radio when the band was instituted. That has been
the generally accepted definition by the vast majority ever since. You
have every right to assign any definition to any word you want, but
that doesn't mean it will be accepted. I can define a linear amplifier

as something that holds down a tarp in the wind, which is fine for me,
but I sure don't expect anyone else to accept my definition.

> NOBODY deserves to be harassed or accused of illegal activity
>unless PROOF of it is shown. Discussion DOES NOT constitute PROOF by law.

If I have in any way harassed you or accused you of illegal activity,
then by all means pursue any civil or criminal charges as you see fit.

>> There are tens of thousands of newsgroups. Those that wish to deviate
>> away from the intended purpose of CB radio can also deviate away from
>> this newsgroup.
>
>The intended purpose of this group is ANY discussion having to do with
>anybody's definition of CB radio.

And that is _your_ opinion, using _your_ definition.

> That includes discussion of amps and other
>items. This is not an FCC regulated or moderated forum, and is open to posters
>in other countries who are NOT subject to FCC regs.

And not all other countries call it CB radio, either.

>> Bullshit. There is nothing responsible about operating illegally.
>
>That's YOUR opinion. Others who choose to discuss THEIR opinions should not be
>harassed as if discussion is "illegal", WHICH IT ISN'T. Those who choose to
>discuss Non-Part-95 CB topics here should not be subject to harassment and
>accusation UNJUSTLY by TROLLS. Until there is proof, the accusations are unjust
>and unfounded and the accusers are TROLLS.

Circular arguments and . . .

>> And when that doesn't work, they whine about anyone that stands up for
>> their rights, and call them trolls.
>
>Discussion is NOT proof of ANY wrongdoing.

Do you speak for those that openly admit operating illegally?
Admission of guilt is not proof, but it is a mighty strong indicator.

> Those standing up for their RIGHTS
>TO DISCUSS ILLEGAL CB ITEMS should NOT BE WHINED ABOUT OR CALLED "ILLEGALS" by
>TROLLS who lack any proof for their accusations.

What happened to your 'free speech' argument? That is hypocritical.

> On the other hand, deliberate
>attempts by those who disagree to disrupt discussion with UNJUST accusations
>are considered trolls.
>
>> Or they threaten them with
>> violence.

>
>Major Bullshit. You're assuming people are breaking the law based on DISCUSSION
>ALONE, and then attributing all sorts of nonsense to them with NOTHING to back
>any of it up. You may stand in support of a troll, or may troll yourself, but
>you CANNOT legitimize it with the law, only your opinion.

And that has nothing to do with all with my statement regarding
threats of violence. Guess what? A threat of violence is not protected
by the constitution, nor is it legal. Not only that, such "discussion"
is also prima-facie, which blows your "lack of proof" argument to
pieces.

>> > There is nothing illegal about
>> >discussing any topic. This is a free country.
>> No it isn't. It is a democracy. The laws reflect the opinion of the
>> majority.
>
>The constitution of this democracy protects the freedom to discuss illegal CB
>items. That's a fact.

That's an opinion that I won't contest. What I will say, as I have
said before, is that CB radio is not intended for illegal use, and
therefore this newsgroup is not intended for promoting the same.

>> So what is the topic of rec.radio.cb? Citizen's Band radio, which is
>> the legally allocated band for license-free communication within
>> certain regulatory limits. If you want a more precise description, go
>
>Horseshit. This forum is not regulated by the FCC or it's definitions.

I never said it was.

>> > If you don't like what you
>> >read here, go away!
>
>This would be good advice for TROLLS who wish only to disrupt DISCUSSION
>between a majority segment of participants they consider "illegals" without ANY
>proof. Discussion IS NOT proof. There ARE NO PROVEN "illegals" on this group
>that I'm aware of. It is a RIGHT to be considered INNOCENT until PROVEN GUILTY
>in a COURT OF LAW. Flaming libelous trolls who don't RECOGNIZE this right is a

I know a Ham like that... 1 four-band HF antenna (try to imagine a naked umbrella), 1 six meter antenna, a dual band UHF/VHF antenna, a 1.2 Ghz antenna, & a 220Mhz antenna... not to mention the standard am/fm antenna..... and all the radios to match the bands.

He DOES use them all at some time or another, but only has a 3 minute drive to work!

I run 3 whips, all trunk-mounted (4 if you include the am/fm antenna)... 1 K-40 for 11m, 1 bayonet-mount Valor for HF (I keep 7 more whips for different ham bands in the trunk.. 80-10m) and a Dual-band Diamond for UHF/VHF. ...Gott'a 1/2 hour drive to work and get to play radio every day!

> tests.. yeah ok

Testing is what improves the theory. But theory is the difference between thinking Winter Solstice and knowing the days will get longer as opposed to a tribe dancing around a fire bellowing uggah-buggah making sacrifices to the local high priest or merchant for longer days.

I would feel better under two conditions:

1. The testing in any way showed how and why the ancients (1940 or so) were wrong when they came to the conclusion that swing was condensed kraut. It is not by any means a new idea.

2. I had some idea what the tests consisted of. Asking a guy two blocks away who isn't likely to tell you your new toy sounds like crap or where you are strong enough to fake out his AGC (and that is really what is happening) doesn't prove a hell of a lot. Put it where you have an s7 carrier (standard) against an s6 noise level with QRM over at least a single hop and you are not controlling the receive AGC and the swang will die a miserable death.

Sorry if JR told you what you did not want to hear but there ain't no free lunches or Santa Claus either.

I can't help but notice that this is the only newsgroup i subscribe to that has one or two pathetic, lonely souls that seem to have nothing better to do. What is the need to insult and otherwise harass people who are bending the law ? Day in, day out, same old cheesy comments from some poor schlep who sits at home all day, giving himself a hard-on over CB radio rules and self-enforcement on a newsgroup. Plus, this schtick is far and away from the best material ive seen on this newsgroup. Take a couple days off from this and write down some new stuff. We as a community will benefit from fresh material...LOL
This is small potatoes compared to, say, an auto news group. I see tons of examples of people who tell others how to modify their cars in ways that void warranties and violate anti-pollution laws. Other tricks than allow unsafe cars get through inspections, and so on, and blah blah blah..
The point is, in not one of these other groups, is there a lonely, anal-retentive geek around to remind people of the law every 10 minutes. Everyone knows the individual that i am mostly refering to, and the other that is even less entertaining, so im not gonna give them any satisfaction by pointing out the obvious. The only advice i could offer them would be to seek out those newsgroups that have the REAL criminals.

I know better. I know the raft of the Ham Gods, will fall upon me. But, I have got to say it anyway. I just can't help myself.
Amateur Radio, as we know it today, is doomed to nonexistence in the very near future. Most likely in our very own life time.
As most who are in the know, already know, this is not a new revelation. The very reason for no code was to drive up membership. Why? Because membership is dropping like a rock off a cliff. The old are dieing, and the young aren't joining. At the current rate of new membership, how long do you suppose it will take ARRL to start courting CB'ers? Not as new possible Hams, but as lowly CB'ers.
The way I see it, in the very near future, the only way the ARRL will be able to generate the budget, needed, to protect your, "our", precious spectrum from capitalism will be to enlist the the lowly CB'er as a CB'er.
But if they did so, they would have to represent, truly represent, the lowly Cb'er and his desires.
I wonder? With the attitude of the powers that be. The new hard line on enforcement. Could it be part of a master plot to get rid of the CB'er? Thus ridding the last great hope for Amateur Radio. What better way to kill Amateur Radio, then the remove the fuel that could refire it.

Cap'n,

That's why I LOVE my 706 MKIIG! One radio in the trunk, one Screwdriver antenna for 80 thru 10 meters + 6M, one dual band Larsen antenna for 2M and 70CM. I get HF, 6M, General coverage receiver, AM broadcast, FM broadcast, aircraft receiver, public safety freqs., scanner, DSP-- all wrapped up in one neat package. Oh, the CB antenna is one of those little cell look alikes which is all I need to find out why the left lane is blocked ahead. If I *have* to have another antenna, I'll use it, but I can't see why I'll have to do that. Mature people either don't need the "porcupine" look, or outgrow it! LOL!

How far you can talk is kind of a tricky question. Pure ground waves at 11m will travel only about 15 miles. Direct waves depend on height, losses in your system, power used, lots of things. And propagation is yet another matter, depending on the maximum usable frequency at the time you operate. By using additional power you're affecting one side of the Effective Radiated Power equation, but your antenna efficiency will be the other side of that equation. Translation -- get the best antenna or phased combination you can for best results!!!

Good luck

Hey Ben,
Same arguement was used in 1917 when RADIO ownership was made illegal
due
to WW I and that the Govt would Ban it forever after WWII so who knows.
The code is on the way out so the tech tests are standard now, so almost
anybody with an understanding of radio theory and practice can get a
license. I wonder if the current wave of enforcement is to run
everybody off
the radio and into Politically Correct forms of communication such as
the Cell Phone, etc.

Of course you did. You seem to have a very great talent for being wrong. You're
an innovator in the practice of being flat-busted mistaken. I've NEVER seen
someone be as wrong SO often as you have been.

> He talks/writes incessantly about "spanking" another man??????

You think you're a MAN? I think not, and thus the term "SPANKING". Spankings
are administered to CHILDREN, and your behavior on this group has been most
consistent with that of a child. I refer you to your crying tone, complaints of
being "BULLIED", ploys for sympathy, your evidenced inability to defend
yourself, your petty complaining, your asking of questions you know the answers
to for attention's sake, your confusing of fantasy with reality, and of course
your smashingly funny way of combatting gweat and tewwible "CB Crimes" not
where they exist but safely behind a computer keyboard, as frightened children
cowering from "bullies" are wont to do.

Hope this helps `,) (SPAAANK!)

QRM
.
I agree with most of your post. However I've operated Collins for the past 10 years and the transmit is so clean that I can watch ch 5 on the tv with rabbit ears in the same room, while the 30 L 1 is on(1kw). Most of the "export' amps of today are spatter master's. So to say with the proper gear you can be as quiet as a mouse and as loud as a lion :)

You STILL haven't read the regs. Besides, that is not my "crusade",
but your's. You were the one whining about how it was "extremely
ILLEGAL". I just challenged you and you can't defend your own
statement.

> I'll stick to using it on the Great Lakes.

Even if it is "extremely ILLEGAL"?

>funny how you adopt "keyklown" from N8, and stand up for Aaron's land
>based marine band right's. Do you ever have a point that's your own ?

Either you haven't read many posts in this NG, or you are showing a
serious problem with your reading comprehension.

>Aaron's silence in this matter most definitely show's his guilt.

Guilt by silence. I guess that's the kind of proof which the illegals
claim nobody has. Using your argument, the fact that someone doesn't
admit to operating illegally is proof that they do. Are the rest of
you going to stand there and let moparholic condemn you?

> You are
>the punk in the background that alway's got his books slapped from his

Craig,
The rating to worry about with tuners is how much voltage
can it take before components start breaking down. The amount
of voltage present in a tuner is a function of power, impedance,
and SWR. At times, depending on the impedance mis-match, the
voltage in a tuner can be ~very~ high. Tuners also have a
power rating. The two ratings 'sort' of follow each, when one
goes up, the other also goes up. Wish I had one rated for 10kW!
Living where I do, I'd never be able to run 10kW, but I could
load anything!

Blue,
Scott's correct. You can purchase a converter, for about 2 bucks, to attach an external antenna.
If you're hell bent on another handheld antenna, purchase the longest telescopic metal antenna you can for it.

I don't know if the 'raft' of Amateur Radio will hit you but then I doubt that the wrath will either. You have just put your oar into an ongoing debate in the Hobby that has gone on for most of my 45+ years in the fraternity. I regularly plot license counts for another group from data supplied by http://ah0a.org Joe Speroni's website. I might suggest it to you for analysis before launching another diatribe.

License counts have been rising if one includes Codeless Techs, stable if you don't. The hobby is a long way from oblivion. The problems of the ARRL are largely of their own making, not the least of which is overselling their influence on the FCC to their members and therefore pissing both sides off in the restructuring controversy. The League is

not Amateur Radio and Amateur Radio is not the League.

You say cryptically that the purpose of no-code was to drive up membership. Do you mean the NoCode Tech which is almost exactly ten years old or no-code HF which has yet to occur in any country? By a rather odd circumstance the very definition of the Amateur Service in the treaties governing radio includes Morse Code knowledge -- taken to mean 5wpm minimum. This will require a treaty modification that cannot begin before 2003 assuming it makes it to the agenda at all and may well take longer than that. On a personal level, I cannot support Morse testing given its obsolescence in modern radio although I am beginning to reconsider given the number of screaming weenies who object to a lousy 5wpm.

You seem to be of the opinion that all frequencies have commercial value. The 25-30 part of the spectrum wouldn't get a $1.75 bid at the auction from anyone bent on commercial usage. Below 25 the object of the game is to fill the freqs before the freebanders grab them. CB freebanders are not the only ones in the game; the entire world is looking for that 'private channel'. The pending reassignment of VHF TV may put some pressure on parts of the 420-450 spectrum when it is necessary to move some stuff out of 470-510 to help in stuffing TV into a much narrower range. The continuing shortage of Cell-phone room will put pressure on Amateur spectrum thru 1.2 GHz for sure. Fat Cousin Charlie has his work cut out for him. But 27 MHz more or less is at best a sideshow and more than likely a posteriority.

The reality is that the Amateur Community by and large, more so as one gets a little maturity in the hobby, does not give rat tits about CB, its practices, its capers, or much of anything else so long as it stays below 28 and above 25.

Ben, my boy, do not overestimate your importance or that of your hobby to the rest of the world.

1593. Re: Express Electronics Inc Rip Off!!!

Newsgroup: rec.radio.cb
Date: 2001-01-09 05:02:17 UTC
From: Bendthelite@webtv.net
Message-ID: <23719-3A5A9B59-83@storefull-115.iap.bryant.webtv.net>
Source record: 67649

If you read the post from the CEO on this newsgroup, he states flat out that it is now his deliberate intention to defraud me of the refund payment his company owes me.

It is my opinion that the facts have shown that this has been his attitude and intent all along. The only thing that has changed is that now he has admitted it in a public forum rather than just privately to his employees and associates, in my opinion.

You can read more by going back to my webpage, and locate the updates link and hit it. The name and address on my purchase receipt for the radio are still current, and always were.

That name and address are the only ones I have ever provided his company. Period.

I never provided him with any updated address. None exists. Lets put it this way...if Express Electronics Inc would send my $320 refund check to the same address that they sent the radio they sold me to, I would get it no problem.
Other stated claims by this person of me trying to manipulate his employees....etc. Nothing but crap as he kicks in the damage control afterburners.

I never wanted to put up that website. He forced me to. He will have to pay the bill eventually. Its the principle of this matter more than the money. He is keeping this going by not paying me, so he must get some kind of demented pleasure from all this arguing back and forth. All he has to do is pay me, I will state publicly that I was paid, remove the website and thats the end of it. But this guy must have some screws loose or something. I have never in my life seen the CEO of a company act in such a manner and make statements like that. Never.

I could be wrong, but what hapened to me might be some kind of scam to get people to send radios back in to his store for Turbo Tuning. You know, the radio is screwed up right out of the box, then the purchaser is hit with the these radios do not work right as delivered stock routine, let us Turbo Tune it for you!! And then you will be good to go! Only 69.95, or whatever they charge for that stuff.

Sorry for having to come on the radio newsgroup and post these kinds of things, but I did not want to get that guy in trouble with Law Enforcement if I could avoid it. I am trying to make him do the right thing and pay up, without getting him in hot water. The ball is in your court CEO, and the tragic thing is that it always was.

Hey Doc. Ever load anything truly weird? The closest I ever came was
after the beer had flowed at an antenna raising, loading a set of
twin-size bed springs hanging from a tree on I believe 40 meters. Didn't
radiate for nothing but we got them to 1.2:1 :-)

There is no one formula; there are many. And in some cases, there
are none. I'll give you some examples.

Impedance is often expressed in rectangular form like:
Z = R + jX

Given the right data, it can be computed by formula.
If the voltage and current are known (both can be complex values),
it is basically Ohm's law:
Z = E/I

To find the input impedance of a terminated transmission line, it is:
Z = Zo (ZL + jZotan(Bl)) / (Zo + jZLtan(Bl))

where Zo is the transmission line characteristic impedance,
ZL is the terminating impedance,
B is the phase constant (2 * pi / wavelenth),
l is the length of transmission line.

Often, there is no formula such as the case of an arbitrary antenna.
In these cases, the impedance is found empirically by direct measurement
(e.g. with an antenna analyzer).

Given an impedance that is in rectangular form, Z = R + jX, the
magnitude of the impedance can be found as:
|Z| = sqrt(R^2 + X^2)

The phase angle for this impedance would be:
angle = arc tan(X/R)

This combined magnitude and angle express the impedance in polar
coordinates.

These last two formulas are what is found in the ARRL Handbook (or at
least, how they should be found). The only reason the ARRL Handbook
converts to polar coordinates is to make the math easier for
non-engineer hams. Multiplying complex values in polar form is just a

matter of multiplying the magnitudes (scalar; not complex values) and then adding the angles. However, in this day and age of calculators that handle the rectangular form with no problem, the conversion is not necessary.

The ARRL Handbook is not written for engineers; it is written for hams who are the next closest step to an engineer but without the math background. Consequently, the handbook is a little lax and presents some formulas that are not strictly correct. For the average ham, it doesn't matter; most hams don't care about the phase angle and have no mechanism to measure it.

So, the handbook incorrectly expresses the magnitude of the impedance, |Z|, as Z. However, the text does correctly describe it as "magnitude." This has been a confusing point for more than one person.

1599. FYI Group: Text Of New Voobner Website

Newsgroup: rec.radio.cb
Date: 2001-01-09 05:32:00 UTC
From: "Mr. Aaron H. Voobner" <aaronvoobner@my-deja.com>
Message-ID: <93e7og$h8$1@nnrp1.deja.com>
Source record: 67654

Thought I'd reprint the text of the new Voobner Website as a courtesy for those of you who's browsers may be sluggish or who's net connection may be clogged. Hope this helps ya.

-Aaron-

Aaron H. Voobner is a real person -- and also a dedicated team of radio professionals who support legal CB.

Radio scofflaws have always been with us - in every radio service. But a new breed of "outlaw" CBer came along recently: folks with no respect for any one or any law. Folks who think they have a "right" to operate illegal CB and not be criticized for it. These "anything goes" people took over the CB band from the fine folks who were there for decades, and in many cases forced them off the air.

The Aaron Voobner Organization (named for its founder, Aaron H. Voobner) is an activist group designed to respond to the supporters of illegal CB, many of whom continually "flame" the rec.radio.cb newsgroup and otherwise attempt to intimidate proponents of legal CB operation. There is nothing responsible about operating illegally. Illegal CB operation is done irrespective of FCC Part 95 and it's intended purpose. Loudmouthed, irresponsible individuals who promote illegal CB operation deserve little, if any respect from legal CBers. They give legal CBers a bad name in the eyes of the public.

NOTE: The rights of individuals to express opinions in favor of breaking FCC Law is protected under the Constitution, as are the rights of those who express opinions in opposition to them.

The Voobner Organization maintains a formidable array of resources by sharing a common screen name (aaronvoobner@my-deja.com) utilized by a staff of concerned individuals to post opinions supporting legal CB. We also express our opinions to legislators, auction sites, equipment manufacturers, amateur radio organizations, law enforcement agencies and public officials.

It is hoped that continued criticism of and opposition to illegal CB practices (such as "keydowns", CB amps, etc.) offends the self-proclaimed illegals to the degree that most of them will eventually get tired of the newsgroup and go away. That will open up rec.radio.cb for discussing the topic it was intended for: CB radio.

No offense, but it sounds like they are large enough a company to take the high road here. The "CEO" obviously took the low road. I'll buy my equipment from someone with a little more humility and good business sense. I may need to have it serviced some day, and it will take a good businessman to stay in business long term. Anyone who treats their customers like that won't have them or any business once many people see how they are treated. I'm sure that they could have gotten credit off the next shipment of radios for that defective one. Damn shame they had to smear that customers character all over the newsgroup.

Gosh Fellas,

Guess I'm new to this radio stuff but I do believe that you're advertising those amps in the wrong newsgroup. You might try an amateur radio newsgroup. Since this is rec.radio.cb and CB amps are illegal to use on CB, there will probably be NO buyers for your amps here. NONE whatsoever. NO CBers will buy your amps. You'll have wasted a lot of time posting here for nothing.

Honest to Pete, I hope this helps ya.

Message-ID: <fLx66.209462$DG3.5087536@news2.giganews.com>
Source record: 67655

I just installed a cb in my truck and I don't know a whole lot about it. Is it normal for it to Squelch out at about 1/3 of the knob's turn? And what would be the best way to adjust the mic gain and rf gain? I have a Cobra 29 NW ST WX cb with a brand new Wilson 1000 antenna. I have installed a few cbs and the others were not nearly as good is mine is but seem like they are outperforming mine. I have a good antenna location, and when i check the SWR on the cb it barely goes above 1. Could sombody please help me?

Thanks Jarrod

1608. My Adventures in CB

Newsgroup: rec.radio.cb
Date: 2001-01-09 06:42:36 UTC
From: barry@airmail.net
Message-ID: <D2FD2AC4F88E49C4.EBF1781CB34828BA.EB8DCA4B9231D956@lp.airnews.net>
Source record: 67663

Okay, so I upgraded to a Cobra 29 LTD Classic today for only
15 dollars more, so what the hell. Bought a cheap 20 dollar
magnet mount antenna from Radio Shack.

First challenge was to find a place to mount the antenna.
There was nothing metallic by the window nor anywhere in
the room. In the end, I mounted it on a metal plate and
opened the window and put it on the ledge.

Okay, so the first time I transmit, I get a loud BOOM
from all over the room! My computer in screensaver mode
freaks out a bit, and a stereo speaker plugged into the
wall makes a big sound. I unplug all electronic devices
in the room and try again. This time its okay... I
never realized what a strong signal I was sending
or how sensitive the room could be. Kind of scary!

Next, I attempt to calibrate the SWR meter on the CB.
I flip to Calibrate and hit transmit. Then I turn the
SWR switch all the way to the right. I never get the
needle to the + CAL sign on the reading, it simply wouldnt
go that far. I managed to get it into the "red zone"
of the meter where it said CAL. Then switched to SWR and
hit transmit. The needle didnt go about 1, so I assume
this is ideal. It did move slightly however. I'm not sure
if I calibrated my radio correctly, cause I never got the
needle to where it needed to be exactly centered on the CAL,
so maybe I did the whole procedure incorrectly, im not sure.

I picked up plenty of action on the various channels,
especially 19, but was unable to initiate a conversation
with anyone. I tried to get something going, but
I'm not sure if anyone could hear me. The dial would
move when I hit transmit, so I think everything works,
but nobody responded to any of my transmissions.

So that's where I'm at now. I'd appreciate any thoughts
or insights to improve my performance.

When did ten year licensing take effect?........
If we haven't seen any non-renewals yet due to it's fairly recent enactment,
it would skew the numbers higher over that ten year period (no non-renewals
= more hams... constantly, over a period of 10 yrs) Once the Ten yr period
is up, we'll start seeing what's really happening, year by year.

FAQ Question #2 - Can I make my mobile work in the house?

Your magnet mount mobile antenna is only half of the system. The other half of your antenna is the "ground plane". Your antenna needs the ground to work against and develop an RF field around the radiating element. To create a ground plane, you can take a piece of tin and solder (or somehow firmly attach) 4 wires at 90 degree angles in a cross formation. The wires need to be about 103 inches long. Then place the antenna somewhere that you can spread the wires out. An attic (or the ceiling) works good. The antenna won't care if it's upside down.

FAQ Question #3 -Why am I coming though stuff?

Your CB transmits AM signals. Amplitude Modulation means your output changes the level or amount of power being transmitted in reference to the electrical representation of your voice. This was the first method of sending voice over the airwaves. The first way to receive radio signals was with a diode or rectifier. Diodes are the main building block of modern solid state devices. Transistors are made of diodes. IC's are made of transistors. Your home is filled with tiny receivers. The wires connected to these bring your signal right in and become detected and amplified. A transmitter also creates harmonics. The second and third harmonics are at 54 and 81 MHz. These just so happen to line up with TV channels 2 and 5. While there is trap for these signals built into the radio, many so called "tune ups" say to adjust those coils for maximum swing. That "maximum swing" is usually harmonics.

My beef IS splatterboxes. And the idiots who run them. It's "anti-social radio" at its worst, and frankly, the spectrum is better off without these miscreants. They contribute nothing to the enjoyment of CB. They take away a lot. I heartily advocate them being hunted down and busted by local LEO's, the FCC, e-Bay, ham vigilante groups, Cub Scouts, or whoever is handy.

How about a chain-link fence, railroad tracks, 100 foot section
of fire hose, 100 foot ladder-platform truck, drew a dipole on paper
and loaded it, two cars, and once loaded a ground wire.
Sounds like I didn't have enough to do, doesn't it?

Hello Doc: I'll half to disagree with ya here.

I have replaced too many A99 antennas with a 5/8 wavelength ground plane antennas, that resulted in improved decrease in neighbours electronics.

I have a A99 in my back yard I use from time to time, and when every I am on the A99 my stereo goes nuts with my antenna analyzer, or my 1 watt test radio. Never have a problem on the ground plane antennas.

Had a older gentlemen that lived in a trailer park, that his A99 raised havoc with everyone. Had a old bent MaCo V5/8 that we replaced the A99, and now now TVI or phone interference.

So there is a big difference, and I believe that the A99 antenna squirts way to much energy down below the horizon, causing interference.

Not to menation, hearing this same story from way too many CB'ers on the ol eye ball or on the radio.

Can't you fookin' read?

The generalisation was made by Scott in the statement, "Most CB'ers
could pass the no-code test without studying."

I asked for evidence for this [general] statement. Whereupon the
assertion was modified by Scott in suggesting that it only applied to
SSB CBers.

Hello Gremlin: Put that mobile magnetic mount antenna on a metal object
such as a air conditioner or something, or attach 3 to 4, 9 foot long
wires (at the antenna) to the outside coax shield, and spread them out,
this would even work inside somewhat.

Jay in the Mojave

The people involved in CB are probably all in jail. It was, after all, totally illegal activity - spectrum theft if you like.

Those who were/are involved in transmitting illegally on 27MHz (or anywhere else for that matter - 6MHz?) are simply common criminals. Quite right that they should be treated as such.

The BIG question is: why do the RSCB support these criminals, and why do they insist on getting them into amateur radio?

Any Council mouthpiece care to explain this for us?

Dave

You haven't begun to plumb the twists and turns in licensing data.
Ten-year licensing is ancient history: there was a period where any
license mod was for ten years. If you get a vanity call sign, the fee is
for ten years so they simply issue the ticket for ten years. So yes,
there is a kind of lump in expirations -- instead of a fairly equal number
each year, there is a lump -- not a huge one but about 2.5 times the
recent years average coming up.

The first of the codeless Techs comes up in a month or two. The world is
watching.

Licensing data will drive a sane man to the booby hatch if he takes it
seriously. For Bendowersagain to claim to be among those 'in the know' is
simply absurd.

Fire up your spreadsheet program, go to http://ah0a.org, and become an
instant expert. As the Smothers Brothers put it to the Streets of Laredo,
'get yourself a get-up and be a cowboy, too.'

I'm an off-roader and I'm looking for the best performance I can get in a CB. I have heard references to side band freqs. I'm a total newbie here but it sounds like you can get a performance boost from using side band. Is there any good online sources for info on this? Does side band help if your partner has a a non side band CB? I would appreciate your guys input. My Cobra just bit the big one and I'm looking in to buying a new CB so any info would be appreciated. Thanks.
-Paul

Just when you think you have seen it all, that lowlife, trolling
piece of human garbage has found a new way to fuck the cb'er.
Now he is trolling the Ebay CB auctions, and reporting illegal
equipment to ebay. It amazes me at what lengths some moron
will go to to get their nuts off.
Well Boobner....I guess you're probably still sitting back jacking
off in celebration of having that amp removed from Ebay.....

The Phoneman

Believe it or not, even with Aaron's, demonstrated, limited knowledge of CB, he, probably, still knows more than whomever Ebay has had policing the various auctions, up to know. It's a mess over there and ain't going to get any better, anytime soon.
In the mean time, if he's over there scurrying about, then that's less we have to deal with here, ain't it?

Jeff

Depends on time of day, what channel you're on, traffic...

And what
> would be the best way to adjust the mic gain and rf gain?

Mic Gain, if no linear involved and the limiter is still in the radio, all
the way up!

RF Gain, all the way up, unless your talking to a neighbor or someone else
really close.

I have a Cobra 29

The other radios could possibly be better radios. I don't have any
experience with the ST brand of Cobras. Heard some good and bad things about
them, the bad being that ST is a waste. Your installation sounds simple and
hard to screw up. I would suggest going straight to the battery for power,
not through the fuse box. There's so many things that can effect an
installation that without more data it's hard to give you anymore tips than
that. Type of car can be an issue. Where you have the antenna on the roof,
is the coax coiled up or spread out, where are you getting power, and even
where does the coax enter the vehicle? Give me more data... I need more
data... ;-)

Of course he failed to answer the question put to him too. So look who is avoiding questions now that the shoe in on the other foot. In Tim's case we are seeing only the tip of the iceberg. The question has considerable merit, due to Tim's predilection for non-sanctioned FCC operations, and as a self disclosed Pirate Radio operator. If one believes what Tim claims as experience, knowledge, available equipment he uses, and his demonstrated disregard for Part 95, a total disregard of Part 97 in the form of bootleg operations on the Ham Bands is not beyond question. Since Ham Radio Bands lately are being closely monitored for various violations bootleggers have reason to be cautious. It is deplorable that Hams have to worry about CBers intruding in to the 10m band, however that is not the only band where they can, and do show up, so long as CBers have access to Amateur H.F. rigs. There is no logical reason the mind set that justifies Part 95 violations on 11m would simply stop there.

A Side Band CB would give you increased range, on Side Band, compared to an AM only rig. There are two main reasons for this. One, all of the transmit power is used to convey your voice over the air without wasting it on a carrier, like AM. Second, the audio "bandwidth" is much narrower than on AM, which means less static and noise from the speaker, which allows you to hear weaker signals or stations much farther away. The second point is not normally mentioned, but is easy to experience for yourself. Just find a clear channel on AM, then switch to Side Band. The reduction in static and noise is very noticeable. Finally Side Band rigs offer both modes so interoperating with AM only rigs would not be a problem. You would select the mode that matches the other radio.

The down side is the other party must also be using a Side Band rig too if you want to enjoy the added range. You can't work cross mode such as AM to Side Band. The radio at each end of the communication link must be using the same mode, either AM or Side Band.

Also trying to talk with more than one other station at the same time could be a problem. Side Band signals need to be "tuned in", using a knob labeled "clarifier", to sound clear. When more than two stations are talking to each other, one of them will be slightly of frequency, and the audio will sound some what distorted. How bad it is depends on how closely the transmit frequency is matched to the other radio(s). In some cases it still may result in enough clarity in the audio to communicate. Unfortunately Side Band CB radios are not designed to allow their transmit frequency to be adjusted, per Part 95 rules unfortunately, which is what would be required to fix this problem. The only thing a stock Side Band CB can do is adjust the receive frequency, which only allows you to tune in one other station exactly. Some on this news group are sure to point out that short coming can be fixed with some modification of the radio, which the legality of doing is not relevant to your question at this point.

That in a nut shell are the basic pros and cons of AM vs. Side Band. I would also suggest that you look around for a fellow CBer, who has a Side Band radio, and have them give you a hands-on test drive, so you can get a feel for the magnitude of the issues above, with tuning in multiple stations on Side Band, and the enhanced performance Side Band signals enjoy.

Sure there is, Leland. There are many freebanders, most, I would say that don't come anywhere near the hammie bands. Now I certainly believe that you have your renegade cber on 10 here and there. It may even occur as much as hammies coming to the cb channels....you know the ones, the same ones that are here, in a CB ng, swearing up and down it doesn't happen..hehehe. Utilizing your own logic, the idiots I hear operating the Liberty Net, it wouldn't be too far fetched for one to believe all hammies share their thoughts. Balderdash! Absolute rubbish! And there is indeed a very logical mindset AND enticement to keep freebanders off the hammie freqs..qite simple, actually. We don't want to talk to you. If we did, we'd get tickets. If you come down to eleven and forget your call, we can talk there as well. Or else, even on triple 5.hahahah..lots of hammies going to triple 5 daily to see whats happening. Don't tell me they don't 'cause they do. Y'a can't lump everyone together, Leland. Just 'cause ya' speed don't mean you'd drive drunk or pulla hit and run, does it? Or maybe it does in your world.

wow, such a technical sounding answer for a guy that is obvioulsy new to
things. simply put youll talk further with sideband but its not as convient as
AM because you have to tune people in and no you cant talk to non sideband
radios. the grant xl or uniden pc122 are great ssb radios but if you want one
with extra channels already the 3900's are selling for 99 bucks at copper
electronics. it is a reliable old radio thats great for the price.

hi leland, he answered your question in another esponcse you just chose to ignore that one and skip straight to this message. here you are preaching about ten meters again. did you finnally pass that code test and work your way to hf? you dont have to worry about me showing up on any ham bands. i have to much great dx to keep me busy on the freeband. if i wanted to talk on the ham bands i would be liscened. 5wpm i can do in my sleep and the theory isnt a problem either, and thats without the radio shack book you studied.
